

FY2 Wave 6 Technical report: Introduction

Results available: Results available

Area of research interest: [Food and You 2](#)

Research topics: [Social science](#)

Project code: FS430662

Authors: Kavita Deepchand, Stephen Finlay, Kathryn Gallop, Hannah Harding, Christy Lai, Amber Parish, Patten Smith, Ammeline Wang and Kelly Ward (Ipsos)

Conducted by: Ipsos and Food Standards Agency

DOI: <https://doi.org/>

Project status: Completed

Date published: 26 July 2023

Survey background

The Food and You 2 Survey was commissioned by the Food Standards Agency (FSA) in September 2019. Fieldwork has been conducted on a biannual basis since July 2020.

Dates of previous waves of fieldwork are as follows:

- Wave 1: July and October 2020
- Wave 2: November 2020 and January 2021
- Wave 3: April and June 2021
- Wave 4: October 2021 and January 2022
- Wave 5: April and July 2022

Further details about each wave of fieldwork can be found in the corresponding technical report.

This technical report is for Wave 6 which was conducted between 12 October 2022 and 10 January 2023 among a cross-section of 5,991 adults (aged 16 years or over) living in households in England, Wales and Northern Ireland. Adults invited to take part in the survey were selected from a sample of the Royal Mail's Postcode Address File (PAF) using a random probability sampling methodology. The survey was conducted using a push-to-web methodology. This is a quantitative data collection method in which participants are contacted using an offline means of contact and asked to complete an online survey. In this survey, participants were contacted by letter, with those who chose not to complete the online survey, after the initial reminder, subsequently sent a postal version. The survey explored participants' food-related knowledge, behaviours and attitudes.

About the Food Standards Agency

[The Food Standards Agency \(FSA\)](#) is an independent Government department working to protect public health and consumers' wider interests in relation to food in England, Wales, and Northern Ireland. The FSA's overarching mission is "[food you can trust](#)", which means the Agency strives towards a food system in which food is safe, food is what it says it is and food is healthier and more sustainable. As such, understanding consumers' attitudes, knowledge and behaviour in relation to food is of vital importance to the FSA.

Food and You 2 is the FSA's principal source of methodologically robust and representative evidence regarding consumers' attitudes, knowledge and behaviour in relation to food. This survey has an important role in measuring the FSA's progress towards its strategic objectives, providing evidence to support its communication campaigns and other activities, and identifying topics for further research or action.

History of Food and You

Since its inception in 2000, the FSA has commissioned surveys to collect quantitative data on the public's reported behaviour, attitudes and knowledge relating to food. Between 2000 and 2007 the FSA conducted an annual Consumer Attitudes Survey (CAS). In 2010, this was replaced by the more rigorous 'Food and You', a biennial survey conducted face-to-face. Food and You became the FSA's flagship social survey. In addition, the FSA conducted regular tracking surveys including the biannual Public Attitudes Tracker and annual Food Hygiene Rating Scheme (FHRS) Consumer Attitudes Tracker. The [FHRS](#) is a scheme that helps consumers choose where to eat out or shop for food by giving clear information about the businesses' hygiene standards. The scheme is run in partnership with local authorities in England, Wales and Northern Ireland.

In 2018, the [FSA's Advisory Committee for Social Science \(ACSS\)](#) recommended that Food and You and the Public Attitudes Tracker be replaced with a new 'push-to-web' survey. Food and You 2 was commissioned in 2019 with data collection for Wave 1 commencing in July 2020.

Due to differences in the survey methodologies, comparisons cannot be made between Food and You or the Public Attitudes Tracker and Food and You 2, therefore Wave 1 of Food and You 2 in 2020 represented the start of a new data time series. Data are collected through Food and You 2 on a biannual basis.

Summary of the survey

Design

The research was conducted using a push-to-web methodology with households selected to take part in the survey receiving a letter that invited them to complete the Food and You 2 survey online. Up to two adults in each household could take part. Fieldwork was conducted from 12th October 2022 to 10th January 2023. Restrictions put in place due to the Covid-19 pandemic were all removed in England, Wales and Northern Ireland prior to fieldwork commencing. However, in the 12 months prior to survey fieldwork (which was the time period referenced in some questions) restrictions would have been in place in all countries to some extent but more so in Northern Ireland and Wales compared to England as described in the Technical report for Wave 4. Restrictions may have impacted some participants' behaviours relating to food, and in turn may have impacted how participants answered certain questions.

In this study, the fieldwork was structured around four mailings:

- Mailing 1: Initial invitation letter inviting up to two individuals per household to complete the Food and You 2 survey online
- Mailing 2: Reminder letter
- Mailing 3: Second reminder, which included up to two versions of a postal questionnaire
- Mailing 4: Final reminder letter

Mailings 2, 3 and 4 were sent only to those who had not completed the survey since the previous mailing, and households where there was a known second participant who was eligible to take part but had not yet completed the questionnaire. There was a question which asked for the number of adults in a household. If one person responded in a household and they stated that

there was only one adult in their household, they would not be sent a reminder letter. If they stated that more than one adult was present in their household then that household would be sent a reminder, unless both adults had completed the survey.

Questionnaire

The survey included an online version of the questionnaire and two postal versions. On both versions there were slight differences between the questionnaires in England, Wales and Northern Ireland, reflecting the different regional government bodies, their roles and responsibilities. For participants in Wales, both the online and postal surveys were offered in Welsh and English. Participants could take part in Food and You 2 via the online survey or using a postal survey.

The online questionnaire was structured as a series of modules covering key areas of interest to the FSA. Most questions were behavioural, asking participants to state their usual activities or to recall recent actions. A smaller number of questions were attitudinal, asking participants to state their opinions on various subjects, or knowledge-based, for example asking participants what they think the temperature inside their fridge should be. The questionnaire included demographic questions to allow the FSA to conduct subgroup analysis on the data. When analysing data from Food and You 2, it is important to note that behaviours are self-reported and therefore may not reflect actual observable behaviour. Measures were taken to minimise the impact of social desirability (for instance, stating that results are reported anonymously) and to increase accuracy (including time frames), but there is likely to be some difference in self-reported and actual observable measures.

Due to the length and complexity of the online questionnaire it was not possible to include all questions in the postal version of the questionnaire. The postal version of the questionnaire needed to be shorter and less complex to encourage a high response rate, so two versions were produced. Key modules (for example, About You, Hypersensitivities) were asked in both versions of the postal surveys, with the remaining content divided across the two versions depending on available space. Details of which modules were included in each postal version are outlined below (unless stated otherwise a module was included in both versions):

- Introductory Questions
- Food Hypersensitivities
- Eating at Home (EH version only)
- Eating Out (EO version only)
- Food Concerns
- Food You Can Trust
- Household Food Security
- About You and Your Household

Whilst steps were taken to make the online and postal questionnaires as comparable as possible, there were minor differences in the order questions were asked, question wording and the way routing was applied. The online and postal versions of the survey can be found in appendices linked to this report.

Further information on the questions asked in each module and questionnaire development can be found in the 'Questionnaire development and cognitive testing' section.

Sampling

A random sample of addresses was drawn from the Royal Mail's Postcode Address File (PAF), a database of all known addresses in the UK. The sample was drawn from the address list for England, Wales and Northern Ireland. The size of the sample from each region aimed to provide an estimated minimum of 1,000 responses in each of Wales and Northern Ireland, and 2,000 from

England, Wales and Northern Ireland were therefore over-represented in the sample. The samples were drawn in this way to enable effective subgroup analysis on the data.

The sample was further stratified by local authority to ensure even geographical spread across the three countries. The local authority classifications used were those that existed when the sample was first selected in July 2020 for Wave 1 and have not been updated to show current boundaries. Within each local authority the sample was stratified by degree of deprivation to ensure a broadly representative sample in terms of income level. As in prior waves, a reserve sample was also drawn at the same time as the main sample. More details on this can be found in the 'Sampling' section.

In each selected household, up to two adults (aged 16 years or over) were invited to participate in the survey. In the interests of maximising the response rate, no selection criteria (other than being aged 16 years or over) were imposed regarding the selection of individuals within each household.

The sampling strategy for this survey is described in greater detail in the 'Sampling' section.

Weighting

Weighting is a process by which survey estimates are adjusted both to compensate for unequal selection probabilities and to reduce demographic discrepancies between the sample who completed a survey and the desired survey population - in this instance, the populations of England, Wales and Northern Ireland.

Following data collection, two kinds of weight were applied to the data. First, selection weights were calculated to equalise selection probabilities for individuals across all sampled households.

Second, these weights were adjusted to ensure achieved sample estimates aligned with ONS country population totals for selected variables. Following this, additional weights were created for use in combined-country analyses by scaling the country sample sizes to be proportional to their corresponding country population values.

Finally, a 'Wales & Welsh-England' weight was calculated to permit comparisons to be made between England (excluding London) and Wales after controlling for differences in age, gender, ethnic group, household size, and urban-rural mix.

The weighting process is described in greater detail in the 'Weighting' section.
