Fishery products

Premises that handle or process fishery products and live bivalve molluscs must be approved under European Union Regulation [853/2004](#), under retained EU law.

Fishery products are defined as all seawater or freshwater animals whether they are wild or farmed. This includes all edible forms, parts and products of these animals.

Seawater and freshwater animals that are not fishery products are

- live bivalve molluscs
- live echinoderms
- live tunicates
- live marine gastropods all mammals
- reptiles
- frogs

[Back to top](#)

Bivalve molluscs

Bivalve molluscs are defined as filter feeding lamellibranch molluscs.

The regulations apply the same conditions to

- tunicates
- echinoderms
- marine gastropods
- setting criteria for production
- harvesting
- relaying
- transportation and dispatch.
