

[Safer food, better business supplement for residential care homes](#)

This supplement is not intended for use in nursing homes. Nursing homes require other food safety procedures that are not covered by SFBB, for example a full infection control policy.

Please remember that the care homes supplement should be used together with the [SFBB pack for caterers](#).

There are three specific food safety issues found in care homes that are covered in this supplement.

A safe method completion record for care homes is also included. This is for the additional safe methods
