Nutrition labelling

It is mandatory for nutrition information to be declared on prepacked food. Local authorities enforce the regulation in NI, England and Wales. We regulate and make enforcement regulations but don't carry out enforcement.

There are certain foods which are exempt from this requirement which can be found in Annex V to the Food Information to Consumers (EU) Regulation N. 1169/2011. Exemptions relate mainly to minimally processed foods and those with little nutritional value. Food directly supplied by manufacturer of small quantities of products to the final consumer or to local retail establishments directly supplying the final consumer is also exempt under Annex V point 19.

For further information on this we provided questions and Answers on the nutrition requirements contained in Regulation (EU) No 1169/2011 on the provision of food information to consumers (FIC).

Further information on nutrition labelling standards in England is available on GOV.UK.

Mandatory information

When providing nutrition information, you are required to declare:

- energy value
- amounts of fat, saturates, carbohydrate, sugars, protein and salt

The content of the mandatory nutrition declaration can be supplemented with an indication of the amounts of one or more of the following:

- monounsaturates
- polyunsaturates
- polyols
- starch
- fibre
- certain vitamins or minerals present in significant amounts as outlined in Regulation 1169/2011 - Part A of Annex XIII

Presentation of nutrition information

Nutrition information should be presented in the following way:

- in tabular format with the numbers aligned
- where space does not permit, the declaration may appear in linear format
- energy value must be expressed in kilo joules (kJ) and kilo calories (kcal) and the amount
of the nutrients must be expressed in grams (g)
- all elements must be included next to each other. The elements must be presented
together in a clear format and, where appropriate, in the order of presentation provided for
in Annex XV to EU FIC. Nutrition information must be expressed per 100 g/ml, using the
measurement units specified in Regulation 1169/2011
- vitamins and minerals must be expressed per 100g/ml and as a percentage of the
reference intake (RI)

**Calculation of nutrient values**

The legislation allows for different methods of calculating the nutrient values. It does not
necessarily require laboratory analysis and it may be possible for a food business operator to
calculate the values themselves depending on the type of product.

Declared values must be based on:

- manufacturer's analysis of the food
- calculation from the known or actual average values of the ingredients used
- calculation from generally established and accepted data

The declared values in the nutrition table are average values to take into account of the natural
variation in foods. The European Commission produced guidance on tolerances for the control of
compliance of nutrient values declared on a label with EU legislation.

The nutrient values must be for the food as sold. Where appropriate the information may relate to
the food after preparation-when sufficiently detailed preparation instructions must be given and
the information should relate to the food as prepared for consumption.

Conversion factors for the calculation of the energy value are given in Annex XIV of 1169/2011

**Front of pack nutritional labelling**

Where nutrition information is declared on the label, certain nutrients can be repeated in the
principal field of vision usually on the front of the food packaging. This information is voluntary.

If a food business chooses to provide this additional declaration, only the following information
may be provided:

- energy only
- energy along with fat, saturates, sugar and salt

The repeated information may be provided in the following formats:

- per 100g/ml only
- per 100g/ml and per portion
- on a per portion basis only

Energy must always be indicated per 100g/ml as a minimum.
Front of Pack Nutritional Labelling Consultation

The Food Standards Agency is seeking views and evidence from our stakeholders including consumers and industry on the current UK ‘multiple traffic light’ label as part of a four-nation consultation.

In Northern Ireland, the FSA leads the current front of pack nutritional labelling scheme, which is recognised as an important tool supporting consumers to better understand the nutrient content of their food and drink.

To ensure the scheme continues to meet the needs of consumers, and is based on the best evidence, we are encouraging responses to the Front of Pack Nutritional Labelling Consultation. The consultation document can be found here.

Further information

The Department of Health provides guidance on nutrition labelling. The European Commission provide further guidance on 1169/2011.
