FOOD STANDARDS AGENCY STRATEGIC PLAN 2015-2020

Report by Richard McLean, Head of Planning, Performance and Change

For further information contact Angela Towers on 07881 717180, email angela.towers@foodstandards.gsi.gov.uk

1 BACKGROUND AND SUMMARY

1.1 In November 2014, the Board approved the FSA Strategy for 2015-20\(^1\). This Strategy recognises that, as the world around us is changing significantly, we need to change too. It set the high level direction and priorities for the FSA for 2015–20 and identified a number of critical themes to underpin our work to achieve ‘food we can trust’;

- Our purpose - to protect public health and consumers’ other interests in relation to food.
- Our renewed pledge - to put consumers first in everything we do.
- Consumers’ interests in relation to food are defined as “Food is safe and what it says it is, and we have access to an affordable healthy diet, and can make informed choices about what we eat, now and in the future.”
- 3 consumer rights –
  - The right to be protected from unacceptable levels of risk
  - The right to make choices knowing the facts
  - The right to the best food future possible
- Clarity on our role and responsibilities and the roles and responsibilities of others
- Productive collaborative working

1.2 The Strategy also outlined our early thinking on a supporting Strategic Plan to deliver against the high level priorities in the Strategy. At the November 2014 meeting we said we would come back to the Board in spring 2015 with more information on this.

1.3 Since then, in consultation with stakeholders, we have further developed the Strategic Plan (see Annex A). The Plan sets out our proposed approaches and suggests a number of key work streams to take forward in Years 1 and 2, to make sure we deliver on the priorities in the Strategy 2015-20, to ensure that consumers are consistently protected, informed and empowered.

1.4 The Board have already helped shape some elements of the Strategic Plan. For example, the Board discussed an initial outline of the developing Science, Evidence and Information Strategy in September 2014, and an update on that is included as a separate item on the agenda for discussion today.

\(^1\) http://www.food.gov.uk/sites/default/files/fsa141105a.pdf
1.5 The Board also agreed our Regulatory approach in January 2015. As we develop other approaches, we will bring these and other significant pieces of work that are likely to result in major change to the Board for discussion and agreement.

1.6 The Board is asked to:

- **Agree:** the approach we are proposing to delivering the strategic objectives in the Food Standards Agency Strategy 2015 – 20.

- **Agree:** that the key initiatives are the right ones to focus on initially, and that the work identified under each of these should be developed, in partnership with relevant stakeholders.

- **Agree:** that key initiatives for future years will be reviewed annually by the Board as part of the Business planning cycle.

2 **STRATEGIC AIMS**

2.1 The Strategic Plan 2015 – 20 both sets out how we will deliver the Strategy (i.e. the approaches we will take) and provides an outline of what we will do over this period to achieve our strategic outcomes (i.e. the activities we will do). The FSA’s purpose being “to protect the interests of consumers in relation to food”, those outcomes are taken from the Strategy’s definition of consumers’ interests:

- Food is safe
- Food is what it says it is
- Consumers can make informed choices about what to eat
- Consumers have access to an affordable healthy diet, now and in the future

3 **IMPACT AND DISCUSSION**

3.1 We will implement and monitor the Strategic Plan through our cycle of business planning and performance reporting. The Board discussed the FSA governance framework with the Executive in January. In line with that discussion, from next year the Board will approve the FSA’s annual high-level business plan and budget at the same time.

3.2 Each year the annual corporate business plan will provide more detail about the activities for that year. Major projects and programmes will sit within the FSA’s portfolio and provide monthly progress reports to the Portfolio Board. The Portfolio Board will ensure that the inter-dependencies within the portfolio are effectively managed.

3.3 The Executive Team, which receives regular updates from the Portfolio Board, will review the business plan every quarter. Updates on delivery of the
portfolio and other significant aspects of the business plan will be included in quarterly performance and resource reports for the Business Committee.

3.4 This regular process of review will ensure that as the environment changes we continue to focus on the areas likely to deliver the biggest contributions to the outcomes for consumers.

4 STAKEHOLDER AND CONSUMER ENGAGEMENT

4.1 We have continued with our programme of stakeholder engagement to help inform the development of the Strategic Plan. We have engaged with a wide range of stakeholders, including consumer groups, food industry representatives, central & local government, the academic and scientific community, and the FSA’s own people.

4.2 Comments received during our comprehensive stakeholder engagement for the development of the Strategy have been used to help develop the Strategic Plan. Feedback showed support for the emerging outline activities and we were told that the FSA’s work on developing a strong science and evidence base should be emphasised, as it underpins the wider work of the Agency. It was also observed that the FSA’s work on horizon scanning and emerging risk identification should be made more visible. We have done this.

4.3 Ongoing engagement with stakeholders is planned, to further inform the delivery of the Strategic Plan, particularly around the development and implementation of some of the key approaches which are at the core of the plan.

5 DEVOLUTION IMPLICATIONS

5.1 Northern Ireland and Wales and Scotland have been involved in developing the Strategic Plan. Engagement with colleagues, Advisory Committee members and external stakeholders in Northern Ireland and Wales is planned for April and May and this will inform the development of Strategic Plans for NI and Wales.

5.2 Once Food Standards Scotland (FSS) is established in April 2015, our Chair and the Chair of FSS may find it useful to discuss with a view to identifying shared interests and where the FSA and FSS can work together for the benefit of consumers across the UK.

6 LEGAL/RESOURCE/RISK/SUSTAINABILITY IMPLICATIONS

6.1 The Board and the Executive Management Team reviewed the corporate risk register in January to ensure that it is aligned to the new Strategy and that the risks on the register focus on risks to delivery of the new strategic outcomes. The Board also reviewed its risk appetite, and a revised risk appetite statement will be submitted to the Audit and Risk Assurance Committee for consideration.
6.2 The FSA Strategy 2015-2020 commits us to consider our activities from the sustainability perspective, as a sustainable food supply for the future is one of the consumers’ interests in relation to food that we identify as important. Assessing the impacts of specific approaches and initiatives as they are developed will therefore include looking at any impacts on sustainability of the food supply.

6.3 The new Strategy reflects the fact that issues of whether food is safe, authentic and affordable are inextricably linked to questions of food supply, food trade and sustainability. Food security and sustainability are issues where others have much greater ability to make a difference than we do. However, whilst this is not an area where the FSA will lead and so it is not a main focus of the Strategic Plan, we will nonetheless seek opportunities to support efforts led by others – for example, in reducing waste reduction as a contribution towards food sustainability – and we will develop performance indicators and measure relating to this outcome.

7 FORWARD PLAN AND DELIVERY TIMESCALES

7.1 The Strategic Plan sets out key work streams for Year 1 and 2. The process for reviewing the Plan is set out above (see para 3.3). The first performance report on progress with the Strategic Plan will come to the Business Committee in September 2015.

8 CONCLUSION AND RECOMMENDATIONS

8.1 The Board is asked to:

- **Agree**: the approach we are proposing to delivering the strategic objectives in the Food Standards Agency Strategy 2015 – 20.

- **Agree**: that the key initiatives are the right ones to focus on initially, and that the work identified under each of these should be developed, in partnership with relevant stakeholders.

- **Agree**: that key initiatives for future years will be reviewed annually by the Board as part of the Business planning cycle.
ANNEX A

Food Standards Agency Strategic Plan 2015 – 20

Working towards – Food we can trust

Introduction

In 2014 the Board approved the strategy for the FSA for 2015-2020\(^1\). The strategy focuses on why we exist – our purpose and mission, and our big objectives.

In developing the strategy we reviewed a large amount of evidence and engaged with consumers, colleagues within the FSA, and a very wide range of stakeholders (academic and scientific, consumer organisations, industry representatives, local authorities, and other government departments and NGOs), to identify the key themes that the FSA would use to inform its planning for the period 2015-2020.

A number of critical themes emerged that inform our strategic plan.

The most important relates to our unique role within government as set out in our founding legislation:

“\text{The main objective of the Agency in carrying out its functions is to protect public health from risks which may arise in connection with the consumption of food (including risks caused by the way in which it is produced or supplied) and otherwise to protect the interests of consumers in relation to food.}”

Focusing on this purpose, set for us by Parliament, and having considered the likely environmental factors that face the UK over the next strategy and beyond, the Board agreed to refresh and reinvigorate the FSA pledge:

\text{We will put consumers first in everything we do.}

We came to the conclusion that given challenges to food safety, authenticity, and food security we needed to consider “the interests of consumers” in the round, and after significant work with consumers and others we agreed a definition of consumer interests that will underpin our strategic plan.

\(^1\) http://www.food.gov.uk/sites/default/files/fsa141105a.pdf
We identified that the FSA would concentrate its own efforts and resources on “food is safe and what it says it is” because those are the areas in which we are well placed to make the biggest contribution to consumer interests. We also said that we would explore whether we could use our science and evidence based approach and our credibility and independence to support consumers to consider the inter-relationship between their immediate and medium/longer term interests in relation to food in the context of innovation in the food system. We know there are growing challenges around safety, affordability, security and sustainability. We also know that some of the current and future innovations possible in food production will conflict with some people’s values. As a society we will need to be clear on the extent to which harnessing innovation will be necessary and acceptable in meeting those challenges. We believe the role of the FSA, where there are innovations which could deliver net consumer benefit across the range of consumers’ interests, is to help frame the public debate and to advocate for adoption of those technologies.

In consultation with consumers we identified three consumer rights to underpin our work:

- The right to be protected from unacceptable levels of risk
- The right to make choices knowing the facts
- The right to the best food future possible.

Consumers sometimes tell us that they feel powerless in their relationship with food. We want consumers to be and feel powerful – able to contribute effectively to shaping a food system that protects their interests and respects their rights. We have roles in protecting, informing and empowering consumers as part of helping them secure these rights. Section 7(2) of the Food Standards Act states that the Agency has the function of “ensuring that members of the public are kept adequately informed about and advised in respect of matters which the Agency considers significantly affect their capacity to make informed decisions about food”.

Food is safe and what it says it is, and we have access to an affordable healthy diet, and can make informed choices about what we eat, now and in the future.
We also recognise that consumers have responsibilities as well as rights and we want to create an environment in which consumers are encouraged to be active players in creating the best food future possible.

We acknowledged that affordability, choice, food security and sustainability are issues where others have much greater ability to make a difference than we do. We do not want to spread ourselves too thinly, and by trying to do too much, achieve less for consumers. But we do want to contribute to the work that others do in these areas where we can to support the best outcomes for consumers.

We also acknowledge that when we take decisions or try to make a difference in our key areas of focus, we potentially affect other key aspects of consumers’ interests in relation to food. So we commit to think more carefully about all our own activities and assess each of them through the lenses of their impact on affordability, choice, nutritional quality, food security and sustainability.

Within our key areas of focus (“safe and what it says it is”) we need to be clear about our role and responsibilities and the roles and responsibilities of others.

As well as rights, consumers also have responsibilities – contributions that only they can make to improve the food system and its impacts on them and their families. It is a responsibility of consumers to manage the risks relating to food that they can. They have a right to be informed and supported in taking on these responsibilities and we are committed to doing everything we can to help them do so.

**Strategic Outcomes**

The strategic outcomes, against which we will measure our impact, are aligned to the definition of consumer interests in relation to food, as set out in the strategy:

- Food is safe
- Food is what it says it is
- Consumers can make informed choices about what to eat
- Consumers have access to an affordable healthy diet, now and in the future
We will identify a series of indicators for each of the strategic outcomes, and we will monitor and report on these as part of our regular business and performance management cycle.

The FSA has a joint responsibility with others – including industry, consumers, and other areas of government – to improve these food related outcomes for consumers. The outcomes are co-produced and result from many factors; the FSA alone cannot achieve them. Only by everyone working together and playing their part will we be able to deliver food we can all trust. We will ensure we play our part and set ourselves targets for those factors which we can take responsibility for delivering.

**The Strategic Plan**

The FSA Strategy 2015 – 20, summarised above, identifies why we exist, what our purpose and mission is, and how that relates to the changing environment in which we operate.

The strategic plan identifies the major themes that will inform how we will set about building the organisation and its capabilities to achieve the purpose and objectives that are set out in the strategy.

In formulating our strategy, the Board recognised that the food system is going to come under increasing pressure over the next ten to twenty years, and that we cannot be sure at what pace changes will happen. So they agreed an approach to the plan for 2015-2020 that focuses on dealing with the challenges of today while seeking to build our readiness for the threats and opportunities of the future.

**We will use science, evidence and information both to tackle the challenges of today, and to identify and contribute to addressing emerging risks for the future**

In our discussions with stakeholders they have reiterated the importance of us continuing to develop and apply a robust evidence base in our work to protect consumers’ interests. Sound evidence, openly published and well communicated is one of the foundations of trust. Our continued commitment to developing the evidence base provides a critical underpinning that enables consumers to access and understand the science behind decisions, and encourages industry to comply with our requests and advice because they know that they are rational in their basis.

We will gather and use evidence to identify and understand the biggest risks and challenges to consumers’ interests, so that we can make sure we focus our efforts on areas where we can make or cause others to make the biggest impacts.

We will develop our strategy and plan for science, evidence and information working closely with stakeholders.
We will use legislative and non-legislative tools highly effectively to protect consumer interests and deliver consumer benefits – influencing business behaviour in the interests of consumers

In all our discussions about our strategy everyone we have spoken to - from the food industry as well as consumers and academics - has reiterated the need for a strong regulator, independent of the food industry and its advocates. People are aware of the resource pressures on local and central government and the need to find sustainably resourced ways of working that protect consumers for the long term in this context.

In ensuring that businesses step up to their responsibilities and consumers are supported and informed to meet theirs, the FSA has access to two main sets of tools. There are traditional regulatory tools such as making legislation and regulations and enforcing them; and there are communication based tools, such as providing greater transparency on business standards, which can incentivise rapid and more comprehensive improvement, and reward responsible businesses as well as better informing and empowering consumers.

We will follow the principles in the Regulatory Strategy\(^2\), which were agreed by the Board in January 2015. These include:

- We will put consumers first in everything we do.
- We will seek to align incentives and disincentives for food businesses with the interests of consumers.
- Our focus will be on the outcomes we are seeking to achieve, keeping an open mind about the means by which those outcomes are achieved.
- Our future regulatory approach should be truly risk-based and assessed in terms of impacts.
- We will use our powers to deliver our strategic objectives - which go beyond our regulatory responsibility in respect of verifying compliance with food law.
- Government intervention (including legislation) is warranted where its benefits to the public are proportionate to the costs \ disbenefits of its application.
- The costs to businesses of regulation should be no more than they need to be.
- It is not the FSA’s or local authorities’ role to achieve compliance – that is clearly defined in law as the responsibility of business.

Consumers deserve the protection of food law enforcement that delivers for them by matching resources to risk, and using and improving the effectiveness of the full range of enforcement tools. Our new Food Crime Unit will focus on tracking down and putting out of business those operators who are wilfully breaking the law and placing consumers at risk. In targeting enforcement resources we will give greater recognition to businesses that do the right thing for consumers and we will continue to concentrate

\(^2\) http://www.food.gov.uk/sites/default/files/fsa-150104.pdf
on finding cost effective ways to support businesses to do so, building on the success of our “Safer Food, Better Business” pack for small businesses, for example.

We will use a “campaigning approach” to deliver benefits for consumers – by which we mean that we will focus clearly on what changes are in the interest of consumers and why; we will seek to persuade consumers and businesses to make those changes that will benefit consumers in the long run; we will align our resources to achieve them; and we will build coalitions with other organisations, parts of government, and opinion formers to deliver benefits to consumers.

**We will be genuinely open and engaging, finding ways to empower consumers both in our policy making and delivery, and in their relationship with the food industry**

At our foundation the FSA was in the vanguard of initiatives to improve openness and transparency and we have a heritage on which we can build, and need to build given changes in the expectations of society, and the environment we operate in.

We believe that consumers are able to engage with complex issues relating to their interests in relation to food if they are given the right support and opportunities to do so, and we will seek to give them those opportunities, share the insights that emerge, and encourage others to engage with consumers openly and make information accessible to them about the food system and how it works.

The right to make decisions knowing the facts requires much greater transparency in the food system. The information collected by industry about the food that people buy, and where and how it is produced, goes far beyond that which appears on labels and menus. The success of the Food Hygiene Rating Scheme shows it is possible to take a range of information, in this case about premises, plans and hygiene practices, and distil them into a simple index that is understood by consumers and allows them to make better informed decisions. We will drive an agenda of transparency in the food system, setting clear expectations about the information that industry and regulator should publish, and working with consumers to understand and articulate the issues that matter to them so that we and other interested parties can develop new tools and applications that help support consumers to take greater responsibility for the food decisions they make and their impacts.

We will find and trial new ways of engaging with consumers and other stakeholders at the very earliest stage so they help us form the questions and challenges that we want policy to address; new ways of engaging people throughout the policy making process not just during formal consultation; and ways of testing potential solutions with stakeholders – policy prototyping to help us refine policy solutions and optimise their delivery.
We will create an environment in which our people are highly capable, effectively supported, and consistently choose to make outstanding contributions to protecting, informing and empowering consumers.

Consumers and other stakeholders, including the food industry, have told us they want an FSA which is strong, appropriately resourced, and credible. As well as requiring us to work on sustainable models of funding, prioritisation, and the acquisition and application of evidence, this critically depends on our ability to attract and effectively deploy the best people.

As our approach becomes one which is about delivering impact from our expertise and influencing others we become more and more dependent on the quality, skills, motivation and alignment of our people. We believe that we are at our best when:

- we are trustworthy and professional
- we are well managed and work with integrity
- we are consumer focused and creative campaigners
- we are flexible and resilient and hard working
- we work really well together across the whole organisation and with others
- we understand business and how to get them to do things
- we focus on outcomes and the processes that support them
- we are innovative

Our people plan will focus on making sure we have the:

- Right people with
- The right skills, knowledge and behaviours, and
- The right engagement
- Supported by the right ways of working

Over the course of the strategic plan period a measure of this will be how we move our people’s engagement and alignment with the FSA up to amongst the best in the civil service, achieving the high performing benchmark in the Civil Service People Survey.

We will consider the best ways of working for the future, enabling people to contribute from the locations and in the ways that suit them best and work across and beyond the organisation’s boundaries collaboratively.

**We will develop an organisation that leverages great impact from small resources**

Our strategy emphasises the importance of viewing the food system as a whole and empowering consumers by giving them information about that system and how well it is protecting their interests. This means that we need to think not only of how we monitor and report on our own performance and how we are doing in terms of delivering the outcomes we can control, but also to identify ways of reporting on the
performance of the system as a whole, shining a spotlight on issues where consumers’ interests need to be safeguarded and identifying where there are failures or concerning trends.

We will seek to identify indicators which demonstrate where there are performance problems or vulnerabilities in the system as a whole, in terms of its capability to deliver against the broad definition of consumers’ interests. This will help us know where to focus our energy and influence to support change, and help consumers and others be empowered to demand change themselves.

Given the constraints on resource that face all parts of government, and the importance of us maximising the benefits to consumers that we cause to be delivered and minimising the costs, we will also place an even greater emphasis on the efficiency and effectiveness of our own work – including the policy processes that underpin our role as a Government department, our operational delivery activities, and the corporate resources that enable and support our work. We will develop a reporting framework and set of KPIs at a strategic level that enable our Board and stakeholders to understand how we are performing, and at an operational level which ensures that we are able to continuously improve the value for money of what we do.

Since our inception we have been a UK wide body with representation in England, Wales, Northern Ireland and Scotland. However, from April 2015 Scotland will have a new food body and we will ensure we manage a smooth transition to the new arrangements and continue to work closely with Scotland to maintain consumer protection. We recognise the benefits for consumers from the FSA sharing skills and expertise across Northern Ireland, Wales and England, and believe that while each will have their own issues to deal with, in the context of a highly globalised food system, there is real benefit in us continuing to operate as a single entity. We will demonstrate this in the way we work. In consultation with the relevant stakeholders we will also produce specific plans covering the work of the FSA in Northern Ireland and Wales and consider the production of a plan for England.

Key activities for the FSA in the strategic plan period

The activities in the table below describe some of the things we intend to do year by year to deliver progress towards our strategic outcomes and protect consumers’ interests in relation to food.

Between 2015 and 2020 we will take as many opportunities as we can to move in the direction outlined in our strategy. There are many specific actions we intend to take – some individually very small, some large and complex. Strategic coherence and maximum progress will be achieved by constantly focusing on the impact of everything we do, rather than by identifying a handful of large “initiatives” to focus on and imagining that the rest of our activities can carry on unaffected or be “deprioritised”
and stopped – our work on allergies, chemicals, and incident management remains as important as ever, for example.

There will be some particularly significant programmes of work, however, which we believe will be critical in underpinning the successful implementation of the strategy. They overlap and have multiple impacts – for example the work on surveillance and horizon scanning identified under science and evidence is important to safe food and to our efforts to ensure that food is what it says it is. Major projects and programmes will sit within the FSA’s portfolio and provide monthly progress reports to the Portfolio Board. The Portfolio Board will ensure that the inter-dependencies within the portfolio are effectively managed.

The following represent the significant priority pieces of work in which we currently anticipate investing time, effort and resources over the next two to three years to move forward the delivery of the strategy. The food system is complex, with many different actors operating in it. No one can predict the future, and we cannot know with confidence what actions we will need to prioritise in the future. It is inevitable that over time the list will need to change. Therefore, as part of our business planning cycle, the Executive Team will review our work programme every quarter and the Board will review the priorities annually to make sure that our activities remain the most appropriate to deliver the greatest possible benefits for consumers and progress towards our strategic outcomes. Given this, the plan is more developed for the first two years, and later years will be fleshed out in future planning cycles.
Working towards Food We Can Trust

Food is Safe

Consumers have the right to be protected from unacceptable levels of risk.

Campylobacter is the most common cause of human bacterial food poisoning in the UK. Each year it is estimated to be responsible for around 280,000 cases of food poisoning and its worst, campylobacter can kill. We continue to analyse the impact of campylobacter, but the most recent FSA estimates suggest that the total impact on the UK economy could be about £900m per year. Up to 80% of cases can be attributed to raw poultry meat. More information on our current Campylobacter Programme can be found at [http://www.food.gov.uk/news-updates/campaigns/campylobacter/actnow](http://www.food.gov.uk/news-updates/campaigns/campylobacter/actnow).

Listeria monocytogenes, which causes listeriosis, is the one of most lethal of all food pathogens. It has a high fatality rate among vulnerable groups (i.e. people with reduced immunity, pregnant women, unborn and newborn babies, people aged over 60 years and patients with specific underlying medical conditions), and causes the most deaths per population in vulnerable groups. More information on our current Listeria Risk Management Programme can be found at [http://www.food.gov.uk/science/microbiology/listeria](http://www.food.gov.uk/science/microbiology/listeria).

</thead>
<tbody>
<tr>
<td>- Campylobacter Campaign – ensure business delivers less than 10% of whole birds at end of production line with more than 1000 cfu/g</td>
<td>- Campylobacter Campaign – review progress and agree next steps - Implement Listeria reduction plan</td>
<td>- Continue implementation of listeria reduction plan - Conclude work on relative measurements of risk and impact and identify and take forward applications</td>
</tr>
<tr>
<td>- Develop and agree Listeria reduction plan</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- Begin work on relative measurements of risk and impact to enable us to compare and engage with consumers in comparing different forms of consumer detriment in relation to food</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Food is what it says it is

Consumers have the right to make informed decisions about their food and this is only possible when it is correctly and accurately identified, and appropriately labelled. The work we did in developing our strategy reinforced our awareness of the risks to consumers associated with authenticity and with food fraud and crime, in which consumers are deliberately misled. We will continue to work with local authority, industry and other colleagues to identify areas of risk and agree actions to reduce them on behalf of consumers.

<td>- Review our major cross-government Incident Management exercise, improving our capability to respond to a major incident.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Gathering and using science, evidence and information

We will continue to develop, apply and openly communicate a robust evidence base in our work to protect consumers’ interests, as a critical underpinning to all we do. We will build our science capabilities to ensure our use of science is:

- Focused on the biggest risks and challenges to consumers’ current and future interests, and how we can make the biggest impacts
- Forward looking and innovative
- Connected across programmes, disciplines and data to gain added value and new insights
- Outward-looking to harness the power of working with and through others
- Supported to develop our own skills, capabilities and engagement across the FSA and with the wider science community.

<td></td>
</tr>
</tbody>
</table>
Empowering consumers

The FSA strategy identifies that consumers have rights and responsibilities with regard to the food that they eat. We want to support them to ensure that their rights are respected and that they are able to take up their responsibilities and make informed decisions about the food that they eat, thus influencing the food system as well as their own well-being and that of their families and communities. We are committed to both being open and engaging ourselves and also to encouraging industry to be transparent about the issues of importance to consumers, so that consumers can have power and influence based on a knowledge of what is happening in the food system.

dialogue, participatory decision-making and effective consumer protection through:
- being open to the views of consumers and others when framing questions;
- engaging early and effectively in the process of identifying and assessing options for action; and
- bringing together the appropriate range of tools and approaches to campaign for action and advocate on behalf of consumers
**Aligning incentives for businesses to ensure consumer interests are protected – implementing the regulatory strategy**

We will support the current delivery model where this is under stress, ensuring a focus on risk-based priorities. We will also seek ways to reduce the administrative and reporting burdens that we place on our delivery partners, while improving for the longer term the information and intelligence we gather, making sure that our regulatory functions do not repeat what is already being done effectively by others.

Our future regulatory role, including how delivery is funded in future, will be influenced by the new EU Regulation on Official Food and Feed Controls, so our work in Europe to re-negotiate this Regulation and then implement it will be important to underpin our future approach.

**Being the best organisation we can be**

Given the scale of the challenges we have identified to the food system and the small amount of regulatory resource available to us to play our part in tackling those challenges, it is critical that as an organisation we excel at leveraging impact from small resources. While being alert to value for money and cost effectiveness in everything we do, we will focus on two areas in particular – our people; and our IT and information management systems and capabilities.
