Contents

<i>Chapter 1 Introduction</i>	1
<i>Chapter 2 Administration, liaison, and co-ordination</i>	2
2.1 <i>Introduction</i>	2
2.2 <i>General requirements</i>	2
2.2.1 <i>Datasets</i>	2
2.3 <i>Requirements relating to documented procedures, policies, plans and programmes</i>	2
2.3.1 <i>Approval of food business establishments procedure</i>	2
2.3.2 <i>Control verification procedure</i>	2
2.3.2.1 <i>Monitoring of service delivery</i>	3
2.3.2.2 <i>Monitoring of official controls</i>	4
2.3.2.3 <i>Monitoring of follow-up action and enforcement</i>	5
2.3.2.4 <i>Monitoring of Management Information Systems (MIS)</i>	5
2.3.3 <i>Conflicts of interest procedure and/or arrangement</i>	6
2.3.4 <i>Information procedure</i>	7
2.3.5 <i>Registration procedure</i>	7
2.3.6 <i>Food incidents and alerts procedure</i>	7
2.3.7 <i>Corporate complaints procedure</i>	7
2.3.8 <i>Food complaints procedure</i>	8
2.3.9 <i>Equipment procedure</i>	8
2.3.10 <i>Enforcement procedure</i>	8
2.3.11 <i>Control and investigation of cases and outbreaks of food related infectious disease procedure</i>	9
2.3.12 <i>IT security procedure</i>	9
2.3.13 <i>Sampling policy</i>	9
2.3.14 <i>Enforcement policy</i>	9
2.3.15 <i>Complaints policy</i>	10
2.3.16 <i>Contingency plan</i>	10
2.3.17 <i>Training programme</i>	11
2.3.18 <i>Service plan</i>	11
2.3.18.1 <i>Introduction</i>	11
2.3.18.2 <i>Format of service plan</i>	12
2.3.18.3 <i>Development of the service plan</i>	12
2.3.19 <i>Official Controls Programme</i>	14
2.3.20 <i>Sampling programme</i>	14
2.4 <i>Delegation of official controls and other official activities</i>	15
2.4.1 <i>Delegation to authorising officers</i>	15
2.4.2 <i>Delegation to other Competent Authorities</i>	16
2.5 <i>Local, regional, and national liaison</i>	16
2.5.1 <i>Liaison arrangements</i>	16
2.5.2 <i>Liaison with the FSA</i>	16

2.5.2.1 Escalating technical queries to the FSA or other Government Agency	17
2.5.3 Liaison at points of entry.....	17
2.5.4 Regional and local liaison groups	18
2.6 <i>Registration of Food Business Establishments</i>.....	18
2.6.1 Freedom of Information and Data Protection.....	18
2.6.2 Establishment record files	18
2.6.3 Retention of records	19
2.6.3.1 Retention of HACCP plans.....	19
2.7 <i>Approval of establishments</i>	20
2.7.1 Applications for Approval.....	20
2.7.2 Competent Authority files	20
2.8 <i>Primary Authority and Home Authority</i>.....	21
2.8.1 Primary Authority Scheme.....	21
2.8.2 Home Authority.....	22
2.9 <i>Provision of discretionary services</i>.....	22
<i>Chapter 3 Authorisation, qualifications, and competency.....</i>	24
3.1 <i>Introduction</i>	24
3.2 <i>Appointment of officers</i>	24
3.2.1 Lead food officer.....	24
3.2.2 Authorisation of officers	25
3.2.2.1 Appropriate supervision.....	25
3.2.2.2 Legislation	25
3.2.3 Qualifications.....	25
3.2.3.1 Qualifications with restrictions	27
3.2.3.2 Qualifications with restrictions - food hygiene	27
3.2.3.3 Qualifications with restrictions - food standards	28
3.2.3.4 Equivalency of qualifications	29
3.2.4 Competency	29
3.2.4.1 Competency assessment.....	30
3.2.4.2 Lead food officer competency assessment	30
3.2.4.3 Officers moving from one Competent Authority to another.....	31
3.3 <i>Training and other Continuing Professional Development</i>	31
3.3.1 Continuing Professional Development	31
3.3.1.1 Types of CPD.....	32
3.3.1.2 Ways of attaining CPD	33
3.3.1.3 Evidencing and recording CPD	33
3.4 <i>Officers undertaking import controls at Border Control Posts</i>	34
3.4.1 Official Fish Inspectors	34
<i>Chapter 4 Delivery of official controls</i>	35

4.1	<i>Introduction</i>	35
4.2	<i>Frequency of official controls</i>	35
4.2.1	Food hygiene and food standards	35
4.2.1.1	Sources of information and intelligence	35
4.2.2	Food Hygiene Rating Scheme and the intervention rating scheme	35
4.2.2.1	Vulnerable risk groups	36
4.2.3	Primary production	36
4.2.4	Initial official controls	37
4.2.4.1	Initial desktop assessment	37
4.2.4.2	Deciding when to undertake the initial official control	37
4.2.4.3	Appropriate methods and techniques for initial official controls	38
4.2.5	Due official controls	38
4.3	<i>Methods and techniques of official controls</i>	39
4.3.1	Food hygiene methods and techniques	40
4.3.2	Remote official controls and non-official controls	41
4.3.2.1	Questionnaires	41
4.3.3	Sampling, analysis and examination	42
4.3.3.1	Procurement of samples	42
4.3.3.2	Avoiding contamination	42
4.3.3.3	Continuity of evidence/traceability by Competent Authorities	42
4.3.3.4	Continuity of evidence/traceability at the laboratory	43
4.3.3.5	Certificate issued by Public Analyst or Food Examiner	43
4.3.3.6	Requests for information from manufacturers or importers	44
4.3.3.7	Right to second opinion	44
4.3.3.8	Samples for analysis	44
4.3.3.9	Samples for analysis – division of samples	44
4.3.3.10	Samples for analysis – sample quantity	45
4.3.3.11	Samples for analysis – containers for samples	45
4.3.3.12	Samples for analysis – storage and transport of samples	46
4.3.3.13	Samples for analysis – notification of results	46
4.3.3.14	Samples for examination	47
4.3.3.15	Samples for examination – organisation	47
4.3.3.16	Samples for examination – quantity of samples	47
4.3.3.17	Samples for examination – handling, transport, and storage	47
4.3.3.18	Samples for examination – notification of results	48
4.3.3.19	Faecal specimens	48
4.3.3.20	Scientific investigation of food complaint samples	48
4.3.4	Inspections	49
4.3.4.1	Food hygiene inspections	49
4.3.4.2	Food standards inspections	50
4.3.4.3	Concluding an inspection	50
4.4	<i>Delivery of official controls and other official activities</i>	51
4.4.1	Official controls of ships and aircraft	51
4.4.1.1	General	51

4.4.1.2 Hazards.....	51
4.4.1.3 International catering waste	52
4.4.1.4 Relevant information	52
4.4.1.5 Official controls and enforcement.....	52
4.4.1.6 Craft registered outside the UK	53
4.4.1.7 UK military ships and aircraft.....	53
4.4.1.8 Official controls of ships	53
4.4.1.9 Official controls of ships - decision to undertake controls and their frequency.....	54
4.4.1.10 Official controls of ships - undertaking official controls of vessels ...	55
4.4.1.11 Official controls of ships - action on conclusion of the official control	
56	
4.4.1.12 Official controls of ships - liaison with the Maritime and Coastguard	
56	
4.4.1.13 Official controls of ships – Food Hygiene Rating Scheme.....	56
4.4.1.14 Official controls of ships - primary authority and home authority	57
4.4.1.15 Official controls of aircraft - preparation.....	57
4.4.1.16 Official controls of aircraft - decision to undertake official controls ..	58
4.4.1.17 Official controls of aircraft - undertaking official controls of aircraft .	59
4.4.1.18 Official controls of aircraft - primary authority and home authority ..	61
4.4.2 Requirement for food safety management procedures based on HACCP	
principles.....	61
4.4.2.1 HACCP flexibility	61
4.4.2.2 Food safety management systems	62
4.4.2.3 Enforcement.....	62
4.5 <i>Non-official controls</i>	62
4.5.1 Advice, education, and coaching	62
4.6 <i>Records of official controls and non-official controls</i>	63
4.6.1 Communication with multi-site businesses	64
4.6.2 Template forms	64
4.7 <i>Import controls</i>	64
4.7.1 Imported food procedures	65
4.7.1.1 Identifying and recording inland food importers.....	65
4.7.1.2 Identifying imported food at points of entry.....	65
4.7.1.3 Points of entry details	66
4.7.1.4 Nominated officer for imported food	66
4.7.1.5 Data returns	66
4.7.2 Monitoring of consignments.....	67
4.7.2.1 No permanent presence at points of entry	67
4.7.2.2 Records of consignments and examinations.....	67
4.7.3 Food not of animal origin	68
4.7.3.1 The Official Feed and Food Controls (Wales) Regulations 2009 ...	68
4.7.3.2 Other legislation	68
4.7.3.3 Early warning system (EWS).....	68

4.7.3.4 Non-GB country pre-export checks	69
4.7.4 Liaison/referrals	69
Chapter 5 Incidents, alerts, and food crime	71
5.1 <i>Introduction</i>	71
5.2 <i>Managing food incidents and alerts</i>	71
5.2.1 Food incidents contacts	71
5.2.2 Action by the Competent Authority - responses to pre-incident contact by FSA	71
5.2.3 Food Incident notifications to the FSA	71
5.2.4 Information received locally that may indicate a wider problem	72
5.2.5 Root Cause Analysis	72
5.3 <i>Liaison with countries outside the UK</i>	73
5.3.1 The European Commission's Rapid Alert System for Food and Feed ...	73
5.3.2 Communications with countries outside the UK	73
5.3.3 Disclosure of information to countries outside the UK	73
5.3.4 Use of overseas evidence in criminal proceedings	73
5.4 <i>National Food Crime Unit</i>	74
5.4.1 Reporting suspicions of food crime to the Unit	75
Chapter 6 Enforcement	76
6.1 <i>Introduction</i>	76
6.2 <i>Powers of entry</i>	76
6.2.1 Powers of Entry, Inspection and Seizure and the Human Rights Act 1998	76
6.2.2 Police and Criminal Evidence Act (PACE) Code B Notices	77
6.3 <i>Enforcement action</i>	77
6.3.1 Hierarchy of enforcement	78
6.3.2 Advice and education	78
6.3.3 Determining appropriate enforcement action	78
6.4 <i>Food hygiene and food standards notices</i>	79
6.4.1 Introduction	79
6.4.2 When to use a notice	79
6.4.2.1 When not to use a notice	79
6.4.3 Drafting of notices	80
6.4.4 Works of equivalent effect	80
6.4.5 Time limits	81
6.4.5.1 Extension of time limits	81
6.4.6 Methods of serving a notice	82
6.4.7 Appeals	83
6.4.8 Other discussions with the Competent Authority	86
6.4.9 Compensation	86

6.4.10	Compliance.....	86
6.4.11	Enforcement	86
6.4.12	Publication of notices.....	87
6.4.12.1	Template notices.....	88
6.4.12.2	Other guidance.....	88
6.5	<i>Remedial Action Notices</i>	88
6.5.1	When to use a Remedial Action Notice	88
6.5.2	When not to use a Remedial Action Notice	89
6.5.3	Drafting of Remedial Action Notices.....	89
6.5.4	Withdrawal of Remedial Action Notice	90
6.5.5	Appeals	90
6.5.6	Template Forms	90
6.6	<i>Prohibition procedures</i>	90
6.6.1	Introduction.....	90
6.6.2	Hygiene prohibition procedures and prohibition procedures.....	90
6.6.3	Hygiene emergency prohibition procedures and Emergency prohibition procedures	91
6.6.4	Health Risk Condition/Imminent Risk of Injury to Health	92
6.6.4.1	Health Risk Condition – HEPN/HEPO	92
6.6.4.2	Health Risk Condition – EPN/EPO	92
6.6.5	Criteria for action - hygiene prohibition procedures/prohibition procedures	93
6.6.5.1	Prohibition on use of premises	93
6.6.5.2	Prohibition on use of equipment.....	93
6.6.5.3	Prohibition on use of a process	94
6.6.6	Seeking additional advice.....	94
6.6.7	Deferring immediate action.....	94
6.6.8	Prohibition of a person	94
6.6.9	Court proceedings relating to prohibition procedures	95
6.6.9.1	Evidence required	95
6.6.9.2	Application to the Court	95
6.6.9.3	Action to be taken prior to the hearing.....	95
6.6.9.4	Information to be given to the Court	96
6.6.10	Service of prohibition notices and orders	96
6.6.10.1	Methods of serving the notice or order	96
6.6.10.2	Affixing the notice or order on the premises	97
6.6.11	Unauthorised removal or defacement of notices or orders	98
6.6.12	Breach of a prohibition notice or order	98
6.6.13	Lifting a notice or order	99
6.6.13.1	Lifting prohibition notices and orders.....	99
6.6.13.2	Lifting of prohibition orders against persons.....	100
6.6.13.3	Appeals – refusal to lift prohibition order	100
6.6.14	Compensation.....	100
6.7	<i>Detention and seizure</i>	101

6.7.1	Introduction.....	101
6.7.2	Food which fails to comply with food safety requirements.....	101
6.7.2.1	Food hygiene	101
6.7.2.2	Food standards	101
6.7.2.3	Presumption it is food.....	102
6.7.3	Dealing with batches, lots, or consignments of food.....	102
6.7.4	Taking action without inspecting.....	103
6.7.5	Detention of food	103
6.7.5.1	Location of detention	103
6.7.5.2	Detention of food notice	104
6.7.5.3	Withdrawal of detention of food notice	104
6.7.6	Seizure of food	104
6.7.6.1	Arrangements for treatment or processing	104
6.7.6.2	Seizure of food - Process	105
6.7.6.3	Food condemnation warning	106
6.7.7	Destruction or disposal of food	106
6.8	<i>Voluntary procedures</i>	107
6.8.1	General requirements.....	107
6.8.2	Voluntary prohibitions.....	107
6.8.3	Voluntary surrender/destruction	108
6.9	<i>Prosecution</i>	108
6.9.1	Introduction.....	108
6.9.2	Time limit for prosecution	109
6.10	<i>Follow-up checks</i>	109
6.11	<i>Enforcement in establishments subject to approval</i>	109
6.11.1	Introduction	109
6.11.2	Notifications of suspension or withdrawal of approval or conditional approval 110	
6.11.3	Appeals against suspension or withdrawal of approval or conditional approval 111	
6.11.4	Detention Notices	111
6.11.4.1	Detention Notices	111
6.11.5	Template forms	111
6.12	<i>Enforcement regarding imported food</i>	112
6.12.1	Enforcement powers for imported food not of animal origin.....	112
6.12.1.1	Detention.....	112
6.12.1.2	Food consignments which are injurious to human or animal health or are unsafe	112
6.12.1.3	Food consignments not complying with food law	113
6.12.1.4	Special treatments.....	113
6.12.1.5	Re-dispatch of consignments	113
6.12.1.6	Appeals against notices served under The Official Feed and Food Controls (Wales) Regulations 2009	114

6.12.1.7 Other provisions	114
6.12.2 Enforcement powers for imported Products of Animal Origin	114
6.12.3 Further guidance.....	115
6.13 Crown establishments.....	115
6.13.1 Introduction	115
6.13.2 Powers of entry and official controls	115
6.13.2.1 Food Safety Act 1990.....	115
6.13.2.2 Food Hygiene (Wales) Regulations 2006.....	115
6.13.2.3 Conduct and frequency of official controls.....	116
6.13.3 Categories of Crown premises.....	116
6.13.3.1 Photographs.....	117
6.13.4 Enforcement	117
6.13.4.1 Food Safety Act 1990.....	117
6.13.4.2 The Food Hygiene (Wales) Regulations 2006.....	118
6.13.4.3 Position of individual civil or government servants	118
6.13.4.4 Statutory Notices	118
6.13.4.5 Liaison with the Primary Authority/the FSA	119
Chapter 7 Matters relating to live bivalve molluscs (shellfish).....	120
7.1 <i>Introduction</i>	120
7.2 <i>The local market exemption (small quantities)</i>	120
7.3 <i>Production and relaying areas</i>	121
7.3.1 Classification and monitoring of production and relaying areas.....	121
7.3.2 Transfer of seed live bivalve molluscs to classified production areas...	121
7.4 <i>Shellfish liaison arrangements</i>	122
7.5 <i>Registration document for the movement of LBMs and exemptions</i>	122
7.5.1 Registration documents for the movement of LBMs.....	122
7.5.2 Examination of registration documents for the movement of LBMs.....	123
7.5.3 Verifying and monitoring registration documents	123
7.6 <i>Action following non-compliant official control sampling</i>	124
7.6.1 Notice of Temporary Closure of Production Area (Closure Notices)	124
7.7 <i>Reporting of illegal harvesting activity.....</i>	125
7.8 <i>Standards for purification centres</i>	125
7.9 <i>Shellfish identification marks.....</i>	126
7.10 <i>Template forms and additional guidance</i>	126
Chapter 8 Subject specific guidance	127
8.1 <i>Introduction</i>	127
8.2 <i>Matters relating to fishery products</i>	127
8.2.1 <i>Introduction.....</i>	127

8.2.2 Competent Authority	127
8.2.3 Scope of approval	127
8.2.4 Direct supply of small quantities of fish	128
8.2.5 Additional guidance	128
8.3 <i>Matters relating to meat</i>	128
8.3.1 Meat - Approval of establishments	128
8.3.2 Enforcement in meat establishments	128
8.3.2.1 Co-located establishments	128
8.3.2.2 Stand-alone establishments	129
8.3.2.3 Wild game	129
8.3.3 Exemptions from approval	129
8.3.3.1 On-farm slaughter and cutting of small quantities of poultry and lagomorphs	129
8.3.4 Meat products, minced meat, and meat preparations – Cutting of meat	
131	
8.3.5 Home slaughter of livestock	131
8.3.6 Less than thoroughly cooked (LTTC) burgers	131
8.3.7 Halal food guidance	131
8.4 <i>Matters relating to raw milk and dairy products</i>	131
8.4.1 Introduction	131
8.4.2 Enforcement	131
8.4.3 FBOs selling raw drinking milk and cream intended for direct human consumption	133
8.4.4 Reusable containers	133
8.4.5 Health requirements for raw milk production	133
8.4.6 Criteria and standards for raw milk	134
8.4.7 Temperature requirements for milk used for the manufacture of dairy products	134
8.4.8 Heat treatment of raw milk or dairy products	134
8.4.9 Phosphatase testing	134
8.4.10 Labelling of cheeses made from raw milk	134
8.4.11 Officially tuberculosis free status and dairy hygiene legislation	135
8.4.11.1 Scope	135
8.4.11.2 Introduction	135
8.4.11.3 Competent Authority enforcement issues	135
8.4.11.4 CCDC notification to Competent Authority of person with confirmed bovine TB	139
8.4.11.5 Further contacts and information	139
8.5 <i>Matters relating to egg packing centres</i>	139
8.5.1 Introduction	139
8.5.2 Scope of the regulations	139
8.5.3 Specific hygiene requirements for shell eggs	140
8.5.4 Egg marketing	141
8.6 <i>Matters relating to egg products and liquid egg</i>	141

8.6.1	Introduction.....	141
8.6.2	Scope of the regulations.....	142
8.6.3	Types of approved premises	142
8.6.4	Dirty eggs	142
8.6.5	Centrifuging or crushing	143
8.6.6	Labelling requirements	143
8.6.7	Pasteurisation and heat treatment.....	143
8.6.8	Analytical specifications.....	143
8.6.9	Temperature control	144
8.6.10	Storage and transport	144
8.7	<i>Small quantities.....</i>	144
8.7.1	Small quantities of primary products	144
8.8	<i>Food for specific groups.....</i>	145
8.8.1	Guidance	145
8.9	<i>Temperature control provisions.....</i>	145
8.9.1	Introduction.....	146
8.9.2	General approach to temperature checks	146
8.9.3	Taking temperature measurements.....	148
8.9.4	Tolerances.....	148
8.9.5	Checking and calibration of enforcement measuring thermometers.....	148
8.9.6	Pre-cooling of instruments.....	149
8.9.7	Preparation of samples for temperature measurement	149
8.9.8	Measurement of product temperature	150
8.9.9	Equipment used for chilled product temperature measurement	150
8.9.10	Food that is warmer than prescribed chill holding temperature.....	151
8.9.11	Food that is cooler than prescribed hot holding temperature	151
8.9.12	Temperature deviations	151
8.10	<i>Bottled waters</i>	152
8.10.1	Guidance	152
8.11	<i>Food waste and animal by-products</i>	152
8.11.1	Introduction	152
8.11.2	Catering waste	153
8.11.3	Official controls of food businesses	153
8.11.4	Disposal of animal by-products	153
8.11.5	Animal feed – former foodstuffs and co-products	154
8.11.6	Animal feed – animal by-product controls	154
8.11.7	Animal feed – catering waste	154
8.11.8	Major investigations	155
8.12	<i>Distance selling/mail order</i>	155
8.12.1	Introduction	155
8.12.2	Distance selling of food from the UK.....	156
8.12.3	Distance selling of food from outside the UK	156
8.12.4	Other guidance	156

8.13 Additional guidance notes to Competent Authorities.....	156
Glossary	157
Annex 1: Template service plan.....	172
Annex 2: Registration	178
A2.1 <i>Registration of food establishments</i>	178
A2.1.1 Who is a food business operator?	178
A2.1.2 Requirement to register a food business establishment	178
A2.1.3 Channels of registration	178
A2.1.4 Use of Information from other sources.....	179
A2.1.5 Primary production.....	179
A2.1.6 Fishing vessels	179
A2.2 <i>Exemptions from registration</i>	179
A2.2.1 Degree of organisation and continuity of activities	179
A2.2.2 Approved establishments.....	180
A2.2.3 Other exemptions	180
A2.2.4 Registration flow chart	181
A2.2.5 Action on receipt of a completed registration	182
A2.2.6 Acknowledgement of registration	183
A2.2.7 Changes to food establishment operations.....	183
A2.2.8 Change of ownership following registration	183
A2.3 <i>Multisite and satellite operations</i>	185
A2.3.1 Single registration for multiple linked establishments	185
A2.3.2 Enforcement and oversight of multi-sites operating under a single registration	186
A2.3.3 Examples of when single food establishment registration may apply	186
A2.3.4 Examples of when single food establishment registration may not apply	
187	
A2.4 <i>Movable food business establishments</i>	188
A2.4.1 Ships and vessels	188
A2.4.2 Aircraft	188
A2.4.3 Trains and coaches	188
A2.4.4 Markets	189
A2.5 <i>Mobile food establishments</i>	189
A2.5.1 Registration requirements.....	189
A2.5.2 Competent Authority responsibilities.....	189
A2.5.3 Transfer of responsibility between Competent Authorities	190
A2.5.4 Best practice arrangement for rating mobile food establishments ...	190
A2.5.5 Mobile food business with multiple units	191
A2.5.6 Risk rating of mobile establishments.....	191
A2.6 <i>Other types of establishments</i>	191

A2.6.1 Food businesses operating out of domestic premises such as home caterers and B&Bs	191

A3.3 <i>Confidence in management/control procedures</i>	204

Chapter 1 Introduction

In Wales, the Food Law Practice Guidance (the Practice Guidance) is:

- issued by the Food Standards Agency (FSA)
- directed at Competent Authorities (local authorities and port health authorities) responsible for the delivery of official controls other official activities and any other activities related to these, such as non-official controls
- aimed at assisting Competent Authorities with the discharge of their statutory duty to enforce food law
- aimed at supporting the quality, consistency, effectiveness and appropriateness of official controls, other official activities, and any other activities related to these

It complements the statutory Food Law Code of Practice (the Code) and provides general advice on the approach to enforcement of the law where its intention might be unclear.

The guidance contained in this document:

- is given in good faith and accords with the FSA's understanding of relevant legal requirements
- takes account of recommendations made by the Directorate-General for Health and Food Safety – Audit and Analysis (DGF) following any audit of the United Kingdom (UK) food control systems
- provides links to a range of guidance

All references to legislation in the Practice Guidance should be considered as potentially subject to amendment or revocation and unless stated otherwise regulatory references refer to assimilated law.

It is the Competent Authorities' responsibility to ensure that they correctly refer to the current versions of relevant legislation when carrying out official controls, other official activities, and any other activities related to these.

Unless stated otherwise, references to chapters and sections in the Code are to the relevant parts of the Practice Guidance. Additionally, there is a glossary with definitions of terms and abbreviations used throughout the Practice Guidance.

Guidance within the Practice Guidance is not statutory guidance, any examples are illustrative and not comprehensive.

Chapter 2 Administration, liaison, and co-ordination

2.1 Introduction

Chapter 2 deals with:

- the organisation of official controls, other official activities, and any other activities related to these, such as non-official controls
- the administrative arrangements, including designation of Competent Authorities, registration, and approval of food business establishments
- liaison arrangements to ensure the:
 - efficient and effective co-ordination between Competent Authorities, delegated bodies, and other government departments responsible for official controls, other official activities, and any activities related to these
 - consistency and effectiveness of official controls and other official activities across the UK
- avoidance of conflicts of interests
- control verification procedures

2.2 General requirements

2.2.1 Datasets

Competent Authorities must provide the FSA with relevant dataset lists, currently the list comprises:

- Food Hygiene
- Food Standards
- Imported Food
- Approved Food Premises
- Imported Food Safeguard Measures
- Food Hygiene Rating Scheme (FHRS)

2.3 Requirements relating to documented procedures, policies, plans and programmes

2.3.1 Approval of food business establishments procedure

The purpose of the approval of food business establishments procedure for food business operators (FBOs) is to ensure FBOs have a procedure to follow when applying for approval of their establishment. To support this, it is recommended that Competent Authorities refer to the [Approval of Establishments Guidance](#).

2.3.2 Control verification procedure

The purpose of the control verification procedure (often referred to as the internal monitoring procedure) is to ensure that official controls and other official activities are carried out consistently and effectively. To support this, it is recommended that Competent Authorities ensure the procedure:

- provides measures to establish:
 - that action taken by officers during and following an official control or other official activities, including at points of entry, is appropriate and consistent with, the Competent Authorities procedures and policies, and other relevant guidance
 - how the planned official control programme can be amended to allow for in-year changes, for example, new and closed food business establishments and food business establishments which have changed risk rating
 - that officers are aware of, and have access to, other published industry guides relevant to the businesses within the Competent Authority's area
 - that officers have due regard to published Guides to Good Practice
 - compliance with relevant legislation, due regard to the Code and the FSA 'Knowledge and skills for the effective delivery of official food and feed controls and other activities' (the Competency standard), and consideration of other relevant guidance
 - appropriate use of relevant proforma forms (including enforcement notices)

2.3.2.1 Monitoring of service delivery

Competent Authorities are required by Article 12(2) of Regulation (EU) 2017/625 to have control verification procedures. As part of these procedures, Competent Authorities will carry out checks to verify conformance with legal duties, official guidance and their own procedures, policies, plans and programmes. It is recommended that:

- monitoring is flexible, proportionate, varied, targeted, and tailored according to personnel and/or risks, eliminating unnecessary demands on managers
- consistency exercises, within and across Competent Authorities, are undertaken, to enable a comparison of officer assessments, these might include:
 - risk scores
 - enforcement decisions
- monitoring focuses on qualitative checks and improvements (rather than quantitative checks on the numbers of activities carried out), for example monitoring trends in business risk profiles and the quality of official controls undertaken by officers
- a 'risk-based' approach to monitoring is taken, for example, greater emphasis on known problem areas (such as issues with a particular officer or higher risk businesses) rather than an inflexible percentage check of all files

- some routine monitoring activities are delegated to encourage all staff to participate in self-monitoring and peer review of each other's work, for example, letters, notices and file updating.

Monitoring activities include:

- reviewing reports of recent risk-ratings, so managers can quickly identify and investigate the reasons for any businesses remaining high-risk over a series of official controls
- periodic accompanied official controls
- reviews of post official control paperwork
- routine caseload meetings
- participating in relevant and robust peer review and/or inter-authority audit (IAA) schemes, which can be used:
 - for enforcement consistency purposes
 - to identify good practice that can be adopted
 - to identify any areas for improvement

2.3.2.2 Monitoring of official controls

The Code provides that monitoring of official controls and other official activities is undertaken. It is recommended that Competent Authorities ensure that records are sufficiently detailed, accurate and retrievable, in order to:

- demonstrate the overall compliance level of food businesses with relevant food law
- enable subsequent officers undertaking official controls to be aware of a business' compliance history
- inform each step of a graduated enforcement approach
- provide the evidence base for formal enforcement action
- enable effective monitoring, for example checking that:
 - official controls are risk-based, so that lower risk business official controls are not prioritised ahead of those which are higher risk, and/or at the expense of following up and addressing persistent problems at higher risk businesses
 - repeated or lengthy non-compliance is being tackled effectively and monitored by line managers
 - official control records (electronic or hard copy) are sufficient to inform subsequent official controls and actions
 - the legibility of handwritten official control reports
 - legal requirements are clearly distinguished from advice
 - any written correspondence specifies, where relevant, the follow-up action and time allowed for remedial works
 - appropriate action has been taken in relation to imported food by inland Competent Authorities, including liaison between authorities

2.3.2.3 Monitoring of follow-up action and enforcement

Part of the control verification procedure includes the monitoring of follow-up action and enforcement. It is recommended Competent Authorities ensure that:

- any enforcement action taken, is in accordance with local enforcement policies, national guidance and appropriate to the severity and persistence of the offences
- any decisions to deviate from the approach prescribed in the enforcement policy are duly considered, and the reasons documented
- the respective due legal process for the range of formal enforcement options is strictly observed
- formal notices are followed up in a timely manner (that is immediately following the date of expiry), with a presumption that enforcement will ensue in the event of continuing non-compliance
- identified instances of serious non-compliance and repeated poor risk-ratings are addressed
- they identify failure to take a graduated approach to enforcement and/or use the full range of enforcement tools
- they identify where symptoms of non-compliance have been treated (for example, a short-term fix) rather than addressing the root cause, resulting in repeated and continuing problems

It is also recommended that Competent Authorities consider:

- regular case conferences between managers and staff, for example, to discuss the compliance progress of all high-risk businesses in each officer's area
- including an 'enforcement review' section on official control forms/files for officers to provide brief reasons for any action taken/not taken, to inform officers undertaking subsequent official controls and to facilitate manager checks of consistency against the local enforcement policy
- consulting with legal services early in formal enforcement actions to ensure that cases can meet all evidential and procedural criteria, and to avoid unnecessary technical challenge to well-founded cases
- developing formal enforcement checklists to ensure due process is checked prior to each step of formal enforcement action
- officers' schedule and diarise follow-up visits/compliance checks against notices/formal actions, to ensure they are carried out on time (and where appropriate, that these dates are notified to the business in the relevant official control report or notice covering letter)

2.3.2.4 Monitoring of Management Information Systems (MIS)

Complete, up-to-date, accurate and reliable databases of local food businesses are essential to enable Competent Authorities to know of all the relevant businesses located in their area and to provide the basis for comprehensive risk-based official control programmes. Part of the control verification procedure includes, monitoring of

databases to ensure that changes of business use and ownership, closures and new businesses can be tracked.

As part of this monitoring, it is recommended that Competent Authorities:

- have in place processes to monitor routinely both the accuracy of the premises database, and the action/information entries inputted for each business
- undertake occasional checks to identify any inconsistencies between file records and database entries of official control details, enforcement activities and actions
- routine cross-reference checks of businesses held on the premises database against other listings of local businesses, for example:
 - advertising on online search engines
 - social media pages
 - other internal Competent Authority databases for example, planning, business rates and building control
 - other relevant agencies, for example, the Veterinary Medicines Directorate (VMD) and the Animal and Plant Health Agency (APHA)
 - Red Tractor Assurance
 - other relevant assurance schemes operated by industry

2.3.3 Conflicts of interest procedure and/or arrangement

The purpose of the conflicts of interest procedure and/or arrangement is to ensure that the authorised officers performing official controls and other official activities are free from any conflict of interest. To support this, it is recommended that Competent Authorities ensure the procedure and/or arrangements:

- cover how authorised officers carrying out official controls and other official activities:
 - are free from any conflict of interest
 - are aware of the potential conflicts of interest that can arise through the promotion of the Competent Authorities services
- prevents authorised officers from providing their own private services, to businesses, in their own time, within the area of the Competent Authority that employs them or within the areas of other Competent Authorities who liaise with the employing authority on enforcement matters
- prevents the exclusive promotion of the Competent Authorities services, if other providers of those services exist in the area, or the services are offered by a different organisation from outside the area
- mean that potential or actual conflicts of interest do not arise as a result of Primary Authority responsibilities, chargeable discretionary services or the contracting-out of services
- includes processes so that enforcement decisions are free from any conflict of interest

- includes details on the action to take where a conflict of interest is identified or provide a reference to other documentation where these details can be found

2.3.4 Information procedure

The purpose of the information procedure is to ensure that any inaccuracies in published information are appropriately rectified. To support this, it is recommended that Competent Authorities ensure the procedure:

- covers the process for identifying inaccuracies and managing those that are brought to their attention
- covers the process for rectifying the inaccuracies and how consumers and businesses are made aware of this

2.3.5 Registration procedure

The purpose of the registration procedure is to ensure that there is a clear and consistent process for FBOs to follow. To support this, it is recommended that Competent Authorities ensure the procedure and/or arrangements:

- allow FBOs to submit a registration form that is complete and accurate at least 28 days before the business starts trading or food operations commence
- provide a registration form that is available to FBOs and enables them to give full details of all activities undertaken
- record the date of the receipt of the information form
- detail the actions to be taken on receipt of completed registration forms, including notifying other Competent Authorities where activities fall outside the receiving Competent Authorities enforcement remit or jurisdiction
- include details on how, where applicable, the Competent Authority obtains information omitted from a registration form, and the circumstances where registration forms are rejected or returned to FBOs

2.3.6 Food incidents and alerts procedure

When developing food incidents and food hazards procedures, it is recommended that Competent Authorities take into consideration the FSA guidance on [Food Safety, Traceability, Product Recall and Withdrawal](#).

2.3.7 Corporate complaints procedure

The purpose of the corporate complaint's procedure is to ensure that complaints about the official control provisions and associated activities of a Competent Authority are investigated and recorded. To support this, it is recommended that a Competent Authorities ensure the procedure:

- is readily available to the public and food businesses in its area
- leads to complaints received about the Competent Authority being investigated in accordance with relevant guidance

- requires a record to be made of all complaints received and actions taken in response to those complaints by the Competent Authority

2.3.8 Food complaints procedure

The purpose of the food complaints procedure is to ensure that complaints about food and food business establishments are assessed, investigated, and recorded. To support this, it is recommended that Competent Authorities ensure the procedure:

- details how persons reporting complaints will be protected from retaliation, discrimination, or other types of unfair treatment as a result of their complaint (for example, whistle-blowers)
- details how personal data of persons reporting complaints will be protected

2.3.9 Equipment procedure

The purpose of the equipment procedure is to ensure that equipment is properly maintained, calibrated, and is removed from service when found to be defective. To support this, it is recommended that Competent Authorities ensure the procedure provides evidence of maintenance and calibration.

2.3.10 Enforcement procedure

The purpose of the enforcement procedure is to ensure that any follow-up checks, or enforcement action taken by the Competent Authority is risk-based and proportionate. To support this, it is recommended that Competent Authorities ensure the procedure:

- leads to enforcement action being taken by their authorised officers which is reasonable, proportionate, risk based and consistent with good practice
- provides instructions for officers on how to undertake enforcement action for all of the available options
- takes into account the following when determining appropriate action to take:
 - the hierarchy of enforcement
 - the Code for Crown Prosecutors
 - the Competent Authorities enforcement policy
 - the Regulators' Code
 - level of risks to consumer safety resulting from non-compliance
 - whether formal action is in the public interest
 - consumer sensitivities around the issue, leading to loss of consumer confidence or economic loss to industry
 - potential for non-compliant foods being distributed widely with large numbers of consumers affected
 - previous history of compliance
 - Primary Authority partnerships
 - Home Authority partnerships

2.3.11 Control and investigation of cases and outbreaks of food related infectious disease procedure

The purpose of the control and investigation of outbreaks and food related infectious disease procedure is to ensure the control and investigation of notified and suspected cases and outbreaks of food related infectious disease. To support this, it is recommended that Competent Authorities ensure the procedure:

- covers the investigation of notifications of food related infectious disease
- is developed in association with all relevant organisations
- is developed in accordance with guidance
- requires all records relating to control and investigation of outbreaks and food related infectious disease to be retained for 6 years

2.3.12 IT security procedure

The purpose of the IT security procedure is to ensure that effective IT security measures are in place. To support this, it is recommended that Competent Authorities ensure the procedure(s) and/or arrangements:

- minimise the risk of corruption or loss of information held on databases
- provide for reasonable security measures to prevent access and amendment of data held on databases by unauthorised persons
- lead to good data practices being kept and data quality maintained

2.3.13 Sampling policy

The purpose of the sampling policy is to set out the Competent Authority's approach to food sampling. To support this, it is recommended that Competent Authorities ensure the policy:

- is published and readily available to businesses and consumers
- sets out the Competent Authority's approach in specific situations such as:
 - surveillance
 - imported food monitoring
 - businesses with an inspection plan issued by the primary authority
 - official controls
 - complaints
 - special investigations
 - national, regional, and local co-ordinated programmes
- covers all samples taken
- details the factors taken into account when formulating their sampling programme, including any national or local consumer issues that will influence the level of sampling to be undertaken
- outlines who will undertake the sampling

2.3.14 Enforcement policy

The purpose of the enforcement policy is to set out the Competent Authority's approach to enforcement, covering all areas of food law that they have a duty to

enforce, including criteria for using all available enforcement options. To support this, it is recommended that Competent Authorities ensure the policy:

- is readily available to FBOs and consumers
- details the approach to enforcement, when and in what circumstances enforcement action is likely to be taken by the Competent Authority, with respect to the range of enforcement actions that are available
- details the approach to revisits, except where this is already documented in another policy or procedure required under the Code
- has regard to any advice and guidance issued by the FSA and any other relevant agency
- does not use the number of improvement notices served or legal processes, such as prosecutions, as an indicator of performance
- addresses circumstances where the Competent Authority is itself the FBO of an establishment, and that where any serious breach of food law is detected in such an establishment. It is brought to the attention of the Competent Authority's Chief Executive without delay

A Competent Authority's food law enforcement policy may be part of a generic policy, or combined with other enforcement policies, providing the applicability of the policy to the enforcement of food law is clear.

The FSA may issue communications to Competent Authorities on:

- new and/or revised enforcement policies
- information on food safety matters
- other issues connected with the effective enforcement of food law

It is recommended that Competent Authorities have arrangements in place to determine what action is appropriate on receipt of such communications, and to bring them to the attention of their authorised officers, as necessary.

2.3.15 Complaints policy

The purpose of the complaints policy is to set out how complaints about food and food business establishments are handled. To support this, it is recommended that Competent Authorities ensure the policy leads to complaints received being investigated in accordance with the Code, relevant guidance and the Competent Authority's policies and procedures.

2.3.16 Contingency plan

The purpose of the contingency plan is to set out what the Competent Authority would do in an emergency. To support this, it is recommended that Competent Authorities ensure the plan:

- provides details of Competent Authorities and other agencies to be involved
- sets out the powers and responsibilities of those Competent Authorities and agencies

- details the channels and procedures for sharing information between the Competent Authorities and agencies involved
- covers arrangements for occasions where authorised officers are absent, for example, if only one officer is authorised to undertake particular controls, these arrangements could include officers in other Competent Authorities being authorised temporarily to undertake these functions

2.3.17 Training programme

The purpose of the training programme is to ensure that authorised officers undertaking official controls and other official activities receive appropriate training. To support this, it is recommended that Competent Authorities ensure the programme:

- sets out how authorised officers undertaking official controls and other official activities will receive appropriate training and ongoing continuing professional development (CPD), to allow them to carry out their duties competently and which is appropriate to their level of authorisation
- sets out the process for reviewing CPD and training needs, so that authorised officers keep their areas of competence up to date
- includes the process for identifying additional training needs
- is informed by, and addresses, any areas identified where an authorised officer's competence falls short of that required to perform their current role or to extend it to new areas of activity
- includes training on subject matters set out in chapter 1 of annex II of Regulation (EU) 2017/625
- includes, where appropriate, training for authorised officers carrying out physical checks on products of animal origin (POAO) at Border Control Posts (BCPs) on the subject matters as set out in chapter 3
- provides how records of qualifications, training and on-going CPD are maintained

This training programme may be included within the authorisation procedure.

2.3.18 Service plan

2.3.18.1 Introduction

Service plans are an important part of the process to ensure that national priorities and standards are addressed and delivered locally. Service plans also help Competent Authorities to:

- follow the principles of good regulation
- focus on key delivery issues and outcomes
- provide an essential link with corporate and financial planning
- set objectives for the future
- identify major issues that cross service boundaries
- provide a means of managing performance and making performance comparisons

- provide information on an authority's service delivery to stakeholders, including businesses and consumers

When developing a service plan, it is recommended that Competent Authorities make it clear what period the plan covers, and what arrangements have been put in place for the regular review and updating of the plan.

2.3.18.2 Format of service plan

Service plans are an expression of a Competent Authority's own commitment to the development of the food service. It is also used by the FSA to assess the Competent Authorities' delivery of the service. Due to this, it is recommended that Competent Authorities provide information about official control activities in a common format, set out in Annex 1.

Service plans may also be of use to other Competent Authorities who will find analysis and comparison of their relative performance greatly facilitated by a common format.

Annex 1 provides a structure in terms of a common format with chapter and subject headings specified, and a general description of the content of each. However, there is no intention to remove Competent Authority flexibility to include additional items under specific headings.

It is recognised that Competent Authorities have had service plans for many years and may have corporate styles or templates that they wish to maintain. It is also recognised that some Competent Authorities undertake the planning and review processes at separate times and issue the results of the review as a separate document. Some include their plans for the food service as part of a larger plan of authority services. Where food service plans form part of broader corporate plans, it is recommended that the food details are separately identifiable in their planning documents.

In cases where several authorities are unifying as a single authority, it is recommended that they ensure that the details set out in annex 1 are included and separately identifiable in the planning documents for the new unitary authority.

Where an enforcement service is shared between authorities, it is recommended that the details set out in Annex 1 are identifiable in the planning documents for each authority.

2.3.18.3 Development of the service plan

The purpose of the service plan is to set out how the Competent Authority intends to deliver and resource official controls and other official activities in its area in relation to food law that they have a duty to enforce. To support this, it is recommended that the plan:

- is subject to qualitative and quantitative performance reviews of delivery at least once per year, which is documented

- is tailored to suit the audience (for example a summary report for members), but also have a version that aligns with the common format in annex 1
- sets out how and at what level official controls will be provided, in accordance with the Code
- reflects the requirements detailed in paragraph six of [the Regulators' Code](#), which ensures that their approach to regulatory activities is transparent
- has regard to any advice issued by the FSA and other relevant agencies
- covers all stages of the food chain and sectors of the food industry, where relevant
- is readily available to FBOs and consumers
- is drafted in accordance with the guidance set out in annex 1, taking account of, and making reference to, where relevant, the following:
 - all food law enforcement issues (including import controls) and consider resource demands and availability (including any shortfall) to deliver the planned official control programme, including out of hours capacity and provision
 - how new food business establishments are identified and how they are to be included in the Competent Authority's planned official control programme
 - how the quality of the Competent Authority's service is assessed and monitored, including identification of database inaccuracies, review of annual targets, and identification of issues with consistency and competency
 - details of any variances in meeting the plan, from previous years, and how this is proposed to be addressed
 - a statement in relation to the Competent Authority's sampling policy, including the basis of the sampling programme
 - details how sampling/official control programmes and enforcement activities are developed and implemented, with due consideration of the National Enforcement Priorities where relevant, including information on any specific activities undertaken to implement them (this may be a simple bullet point list of planned activities)
 - what local and/or regional intelligence sources have the Competent Authority considered when planning their official controls
 - details of the Competent Authority's plans for continuous improvement
 - details of what arrangements have been put in place for the regular review and updating of the plan
 - what, if any, grant money, available from the FSA, the Competent Authority has been allocated and used

The FSA may recommend that Competent Authorities review their service plan, for example, to accommodate the work of approved feasibility studies, pilots, or

pathfinder projects. The FSA will communicate any relevant work that may impact on service plans to Competent Authorities so that they may be reviewed.

2.3.19 Official Controls Programme

The purpose of the official controls programme is to set out the Competent Authority's risk-based programme of official controls, which includes all food business establishments for which the Competent Authority has responsibility. To support this, it is recommended that the Competent Authority ensures the programme:

- includes all registered and approved food business establishments
- is based on the relevant risk rating schemes (food hygiene and food standards) determined in accordance with chapter 4 of the Code
- has regard to the Farm Regulators' Charter, where applicable
- provides mechanisms for authorised officers to:
 - have regard to primary authorities' assured advice
 - follow inspection plans
- makes use of information supplied to them by FBOs in connection with the registration or application for approval of their food business establishments in order to determine when to carry out official controls
- is adequately resourced

Single-tier Competent Authority areas may opt to base their planned official control programme on either the food hygiene or food standards risk rating scheme under the Code. It is recommended that Competent Authorities exercising this option ensure that:

- official controls consider both food hygiene and food standards
- official controls occur no less frequently than would have been the case had both schemes been used
- a food hygiene and food standards risk assessment are completed and recorded

2.3.20 Sampling programme

The purpose of the sampling programme is to set out the details of the Competent Authority's risk-based food sampling activities. To support this, it is recommended that Competent Authorities ensure the programme:

- takes into account the main objectives of food sampling:
 - protecting health
 - detecting deceptive and fraudulent activities
 - compliance with labelling requirements
 - providing advice to FBOs
 - promoting fair trade and deterring bad practice
- is risk based and takes account of:

- the procedures adopted by the food business to ensure compliance and their history of compliance
- the Competent Authority's primary authority, home authority or originating authority responsibilities
- the need to ensure that the provisions of food law are enforced
- whether there are food manufacturers in the area and the degree of control and monitoring exercised by manufacturers for all potential faults
- whether any distribution centres deliver food to a wide area
- the type of food additives FBOs (for example, food manufacturers, and importers) use in the area
- whether national sampling programmes highlight any food types which relate to specific premises in the area
- national or regional imported food priorities/surveys and the UK's National Control Plan
- emerging national and international concerns
- local consumer and business concerns
- the severity of the effect of any given fault with the food, including the likelihood of the occurrence of the fault, the consumption pattern applicable to the food, the degree and distribution and the stage in the production and distribution chain at which the problem can occur or could be more easily detected
- takes account of imported food, in particular:
 - any statutory requirements for sampling laid down in assimilated law
 - any agreed UK Health Security Agency (UKHSA)/FSA sampling programmes
 - any sampling required following a Food Alert, Early Warning System (EWS) or relevant notification
 - information from any regional liaison group, local or other sampling survey
 - any imported food where there is no known history or information on the product
 - local priorities, including consumer complaints relating to imported food
- is planned to avoid foods that are already being looked at on a wider basis, for example, those sampled as part of imported food controls at BCPs

2.4 Delegation of official controls and other official activities

2.4.1 Delegation to authorising officers

The power to authorise officers needs to be properly delegated to the authorising officer. It is recommended that Competent Authorities satisfy themselves powers have been appropriately delegated, and that this delegation has been recorded, for example, in the constitution of the Competent Authority.

2.4.2 Delegation to other Competent Authorities

Competent Authorities may be able to use authorised officers from other Competent Authorities to carry out their official controls and/or other official activities using the provisions provided by the Local Government Act 1972.

It is also recommended that Competent Authorities seek advice from their legal teams before delegating any functions to another Competent Authority.

2.5 Local, regional, and national liaison

2.5.1 Liaison arrangements

The Code provides that Competent Authorities respond to requests from other Competent Authorities or the FSA for information or assistance. Examples of when Competent Authorities may request information or assistance may include:

- referrals of cross-boundary enforcement issues or concerns
- referrals of food complaints reported to a Competent Authority
- information to help coordinate enforcement/infectious disease control activities
- information to help Competent Authorities responsible for delivery of official feed controls ensure registers of feed business establishments are complete and accurate in respect of businesses who manufacture or place on the market products for use in feed

Upon receipt of a request or referral, it is recommended that a Competent Authority take the following action:

- acknowledge receipt of the communication and advise the originating Competent Authority that the matter is being dealt with
- investigate and/or take appropriate enforcement action, if necessary
- inform the originating Competent Authority of any action taken
- ensure that responses to requests are open, transparent, and provided without undue delay
- keep the originating Competent Authority updated on progress, particularly when action is ongoing, and the outcome will not be known for some time

2.5.2 Liaison with the FSA

Local authorities (LAs) and port health authorities (PHAs) are designated as Competent Authorities to deliver official controls, and other official activities for food, on those matters that are not the remit of the FSA.

The FSA is responsible for:

- approval of establishments under Regulation (EC) No 853/2004 laying down specific hygiene rules on the hygiene of foodstuffs (including wholesale meat markets), where control falls to an official veterinarian, and enforcement in such establishments approvable activities that are conducted in establishments where controls fall to an official veterinarian, but which don't themselves require official veterinarian oversight. For

example, minced meat, meat preparations, mechanically separated meat, meat products, rendered animal fats and greaves, treated stomachs, bladders and intestines, gelatine and/or collagen

- delivery of dairy hygiene official controls on milk production holdings
- enforcement in relation to the matters regulated by Schedule 6 of The Food Hygiene (Wales) Regulations 2006, in so far as it applies in relation to raw cows' milk intended for direct human consumption
- delivery of food hygiene official controls for egg producers, housing over 350 *Gallus gallus* hens
- the authenticity, traceability and labelling of wine sector products and enforcement in the wholesale market and wine sector products produced in the UK (including vineyards and wineries)

The Code provides that Competent Authorities liaise with the FSA in relation to establishments subject to approval by the FSA.

2.5.2.1 Escalating technical queries to the FSA or other Government Agency

The following approach for the escalation of queries has been endorsed by the Food Hygiene Focus Group and Food Standards and Information Group for Competent Authorities to follow before escalating a query to the FSA, which is to liaise:

- within your Competent Authority
- with your regional food liaison groups
- to the Directors of Public Protection Wales, Food Hygiene Expert Panel, Food Standards and Labelling Group or the Regional Lead Feed Officer Group
- with the FSA by emailing lasupportwales@food.gov.uk

The relevant group will form an opinion, however, if a consensus view is not achieved it will be referred to the FSA.

For consistency, it is also recommended that queries or requests are posted for information on the [Knowledge Hub](#).

2.5.3 Liaison at points of entry

The Code provides that Competent Authorities with points of entry or external temporary storage facilities (ETSF) liaise with relevant local organisations. These organisations include, where appropriate:

- neighbouring Competent Authorities (particularly for joint boards and ports, which fall under the jurisdiction of more than one Competent Authority, including county councils for certain Trading Standards responsibilities)
- His Majesty's Revenue and Customs (HMRC)
- Border Force
- Convention on International Trade in Endangered Species (CITES) teams
- APHA

- Public Health Wales (PHW)
- Food and Environment Research Agency (FERA)
- port operator
- import agents
- Internal Temporary Storage Facilities operators
- ETSF operators
- Maritime and Coastguard Agency (MCA)
- Medicines and Healthcare products Regulatory Agency (MHRA)
- relevant primary authorities

2.5.4 Regional and local liaison groups

It is recommended that regional and local liaison groups:

- discuss matters of legal interpretation and consistency with colleagues in the appropriate regional or local food liaison group and the Primary, Home or Originating Authority if appropriate
- avoid taking unilateral decisions on interpretations without seeking the views of other Competent Authorities
- undertake regular liaison to ensure that the advice given by groups of Primary or Home Authorities serving food businesses trading in the same sector of the industry is consistent
- request representation from a Competent Authority's Public Analyst and/or Food Examiner
- request representation from the FSA, PHAs, the Consultant in Communicable Disease Control (CCDC), Consultant in Public Health Medicine (Communicable Disease/Environmental Health) (CPHM (CD/EH)), and other experts or specialists as the need arises
- request representation from other delegated bodies

2.6 Registration of Food Business Establishments

Guidance on registration of food business establishments can be found in annex 2.

2.6.1 Freedom of Information and Data Protection

The Data Protection Act 2018 and the Freedom of Information Act 2000 would apply in relation to food business records. It is recommended that Competent Authorities ensure their data protection policies consider food business registrations and approvals, including their reasons for holding data and the supply of data to other agencies for the purposes of ensuring public health and the effective enforcement of food law.

If Competent Authorities have any doubts about releasing data or information, they may seek legal advice and/or contact the [Information Commissioner's Office](#).

2.6.2 Establishment record files

It is recommended that these records include:

- information on any special equipment, processes, or features undertaken by the business for their food activities
- copies of any correspondence with the business,
- copies of food sample analysis/examination results
- a system for highlighting significant issues, including details of any non-compliance to be reviewed at future official controls
- in respect of establishments inspected for food hygiene purposes, an assessment of the businesses compliance with procedures based on Hazard Analysis Critical Control Points (HACCP) principles, where appropriate
- information on hygiene training undertaken and qualifications held by employees, including any training on the implementation and operation of the food safety management system
- information as to whether the business imports food and/or is the first destination inland after import
- in respect of premises inspected for food standards purposes:
 - the existence and assessment of any documented quality system
 - details of other businesses that produce or import for the business

2.6.3 Retention of records

The Code provides that records relating to food business establishments, including those that have ceased trading, are retained for at least six years, unless they are required for longer retention. Examples of reasons why records may be retained for longer include:

- where they are subject to litigation
- where they are subject to review by Local Government Ombudsman
- where document management policy of the Competent Authority specifies a longer period
- where the establishment's next intervention being due beyond the minimum six-year retention period, in which case it is recommended that records continue to be retained and include:
 - the information necessary to meet the Food Hygiene Rating Scheme (FHRS) data standard
 - the information necessary for the FSA to fulfil its duty to keep national lists
 - details on the type of activities undertaken by the business, including any special equipment, processes, or features, where relevant
 - details of any significant issues, including details of any non-compliance, to be reviewed at future official controls

2.6.3.1 Retention of HACCP plans

The public inquiry into the 2005 outbreak of E. coli O157 in South Wales recommended that officers obtain a copy of a business' HACCP/food safety

management plan at each inspection, which is held on the business' establishment file.

The primary concern with this recommendation was the retention of the plan's core elements. Retention of the critical control points from a business' HACCP plan, rather than the entire plan, is considered sufficient to ensure that authorised officers looked at the performance of a business over time and did not miss danger signs from previous official controls.

2.7 Approval of establishments

Guidance on the approval of food business establishments is provided in the [Approval of establishments - Guidance for local authority authorised officers](#).

2.7.1 Applications for Approval

Under the Provision of Services Regulations 2009, Competent Authorities are required to have an electronic means for FBOs to seek approval for food establishments.

Applications for approval may be electronically completed and submitted to the relevant Competent Authority online using the [GOV.UK website](#).

2.7.2 Competent Authority files

To ensure consistency in the content and structure of files produced for establishments which require approval, it is recommended that Competent Authorities have a properly structured file, in hard copy or held electronically, containing all the relevant information about the establishment.

An example of what an approval file may contain, as relevant and appropriate for the establishment, includes:

- the application form
- a plan(s) of the establishment indicating:
 - layout of the establishment
 - location of equipment
 - workflows for each product line
 - water distribution system within the establishment including all outlets and sampling points
 - drainage layout
 - pest control - baiting and/or trapping points within the establishment and external areas
- a synopsis of the establishment (no more than one side of an A4 sheet) which briefly describes what type of establishment it is, products produced, volume of product, type of trade, number of employees, approval number, what it is approved for, details of other businesses that produce or import for the business
- a record of decision making, for example on selected categories of approval and approval exemptions considerations, where applicable

- a planned programme of work(s) to achieve approval
- an approval notification document specifying:
 - details of activities to which the approval relates
 - approval number
 - classification
 - special hygiene direction(s)
 - any establishment-specific derogations that have been granted
 - any other conditions or limitations specified by the Competent Authority
- any arrangements acceptable to the Competent Authority
- all relevant information and documentation, including
 - labels and commercial documents bearing the identification mark
 - letter indicating the Competent Authority's involvement in the planning and implementation of the establishment's hygiene training of staff
 - intervention reports in chronological order
 - correspondence with establishment in chronological order
 - copies of notices or other formal action taken, in chronological order
 - a copy of company's emergency recall and withdrawal plan and traceability system including names, telephone numbers, of key personnel within the company
- results of all samples taken by the Competent Authority
- location of any off-site facilities
- copies of any other documents that have been provided by, or copied at, the approved premises, including:
 - HACCP documentation
 - supplier information
 - product list
 - process records
 - management and key contact names and contact details
 - photographs and digital images, as appropriate
 - raw material, product and water sampling plans and test results*
 - other sampling plans and results, for example, environmental sampling*

* Where FBOs are using alternative sampling plans or methods in accordance with Article 5 of Regulation (EC) No 2073/2005 on the microbiological criteria for foodstuffs, it is recommended that the Competent Authorities verification of the proposed alternative approach is held on file.

2.8 Primary Authority and Home Authority

2.8.1 Primary Authority Scheme

The principles of Primary Authority are set out in parts 1 and 2 of the Regulatory Enforcement and Sanctions Act (RESA) 2008. It is a statutory scheme administered

by the Office for Product Safety and Standards (OPSS) on behalf of the Welsh Ministers and links to relevant guidance are below:

- [Primary Authority Statutory Guidance](#)
- [Guide for enforcement officers](#)
- [Guide for national regulators](#)

The [Primary Authority Register](#) can be used to identify if businesses have a Primary Authority partnership.

The FSA became a Primary Authority supporting regulator on 1 October 2017 following changes introduced by the [Enterprise Act 2016](#). Primary authorities may seek support from supporting regulators in relation to the provision of Primary Authority Advice or the development and management of an inspection plan.

2.8.2 Home Authority

The FSA endorses the Home Authority Principle, which is governed by a Joint Statement of Commitment, signed by the OPSS, the Chartered Trading Standards Institute (CTSI) and the Chartered Institute of Environmental Health (CIEH), in June 2011.

The Home Authority Principle seeks to maintain and support the essential elements of the regulatory landscape and to rationalise and streamline existing systems of professional support and network communication, enabling a coherent framework of business engagement to be developed.

Home Authorities operate in situations when a business does not have a Primary Authority partnership in place, but where there remains a clear need for regulatory activity in relation to that business to be co-ordinated.

The Home Authority Principle places emphasis on goods and services originating from a business based within a Competent Authorities own area, in an effort to regulate the business at source, thus giving rise to efficiencies in the regulatory system as a whole.

It is recommended that Competent Authorities considering giving advice or taking enforcement action in relation to food businesses that have a Home Authority, consider whether they need to contact the Home Authority before doing so.

2.9 Provision of discretionary services

Competent Authorities may charge for the provision of discretionary services¹, such as the provision of training or business advice, otherwise than for commercial purposes.

It is recommended that Competent Authorities providing these services ensure:

- they make readily available:

¹ Section 93(1)(a) of the Local Government Act 2003

- their fees and charges²
- details of how their fees and charges were calculated and an explanation of whether compliance will affect fees and charges, where appropriate³
- what the main features of the service(s) are⁴
- any terms and conditions applicable to the provision of the service⁵
- details on how to complain about the service provided⁶
- their conflict-of-interest procedure and/or arrangements, sets out how authorised officers will remain free of conflicts of interest when delivering chargeable discretionary services
- they make clear wherever details of these services are provided, that other providers of these services are available
- the FBO agrees to the provision of the service before it is provided, and is aware that it is voluntary
- they make clear to the FBO verbally, and in writing, if appropriate, that these services are separate to an official control or other official activities

² Regulation 8(1)(l) of The Provision of Services Regulations 2009

³ Paragraph 6.2 of the Regulators' Code

⁴ Regulation 8(1)(m) of The Provision of Services Regulations 2009

⁵ Regulation 8(1)(i) of The Provision of Services Regulations 2009

⁶ Paragraph 6.2 of the Regulators' Code

Chapter 3 Authorisation, qualifications, and competency

3.1 Introduction

Chapter 3 deals with:

- the qualifications and competency of officers undertaking official controls, other official activities, and any other activities related to these, such as non-official controls
- provisions relating to officers' training in official controls and other official activities

3.2 Appointment of officers

Article 5(1)(e) of Regulation (EU) 2017/625 requires Competent Authorities to have, or have access to, a sufficient number of suitably qualified and experienced officers so that official controls and other official activities can be performed efficiently and effectively.

To support this, Competent Authorities may:

- establish regional or cross-regional arrangements so other Competent Authorities undertake official controls and/or official activities on behalf of the Competent Authority
- employ temporary staff or contractors

The advantage of regional or cross-regional arrangements is that they support resilience and sustainability with respect to knowledge transfer between and within Competent Authorities and regions.

3.2.1 Lead food officer

The Code provides for the appointment of one or more, appropriately qualified and competent lead food officers.

To support this, Competent Authorities may appoint separate lead food officers with responsibility for food hygiene, food standards, food import controls, food hygiene at the level of primary production and/or for specific tasks, for example:

- developing, implementing, monitoring, and reviewing documented policies, procedures, and plans
- management of the response to an incident and alert
- collating and reporting data

Additionally, a Competent Authority's lead food officer may be employed by another Competent Authority, provided they are competent for the role and the activities they will be authorised to undertake.

The FSA can be notified of the lead food officer's name and contact details (telephone number and email address) by emailing lasupportwales@food.gov.uk and recording the information on [FSA LINK](#). The details can also be updated on this platform if the lead food officer details change.

3.2.2 Authorisation of officers

3.2.2.1 Appropriate supervision

The Code provides that officers have appropriate supervision based on their experience, competency and qualifications held. This will mean that certain officers, such as those who are new to the Competent Authority or undertaking new activities, are subject to greater supervision than other officers.

For example, where an officer, who does not hold an suitable qualification, is initially authorised to undertake official controls at category E risk rated establishments, the outcome of the official controls they undertake and the risk rating provided may be reviewed by an officer, who holds an suitable qualification and is competent, to ensure it is appropriate.

3.2.2.2 Legislation

The Code provides that officers, based on the activities they undertake, are specifically authorised under all relevant legislation.

The Food Safety Act 1990 allows for the authorisation of officers, in writing, either generally or specially to act in matters arising under the act or regulations made under it. However, some legislation, for example, The Food Hygiene (Wales) Regulations 2006 and The Official Feed and Food Controls (Wales) Regulations 2009, are not made under the Food Safety Act 1990 and contain specific enforcement powers, which officers would need to be specifically authorised under, and referred to in authorisation documents, including officers' credentials.

3.2.3 Qualifications

The Code provides that where an officer does not hold a suitable qualification (as listed in sections 3.2.3.1, 3.2.3.2 and 3.2.3.3 of the Code) they can be authorised to undertake the activities, in table 1 below, if the officer can demonstrate that they are competent to undertake those activities.

To support Competent Authorities in determining whether officers are competent, table 1 also sets out the relevant activities within the Competency standard.

Table 1: Relevant activities for officers who do not hold suitable qualification within the Competency standard

Activity	Relevant activities within the Competency standard
Sampling	<ul style="list-style-type: none"> Activity A: Common activities Activity C3: Sampling Sub-activity C3.1: Taking informal samples Sub-activity C3.2: Taking formal samples
Education, advice and coaching	<ul style="list-style-type: none"> Activity A: Common competencies

Activity	Relevant activities within the Competency standard
	<ul style="list-style-type: none"> Activity C1: Education, advice and coaching

Informal action	<ul style="list-style-type: none"> Activity A: Common activities Activity E1: Informal action
<p>Due official food hygiene controls at broadly compliant category D risk rated establishments and category E risk rated establishments which are:</p> <ul style="list-style-type: none"> not subject to approval under Regulation (EC) No 853/2004 or the requirements of Regulation (EU) No 210/2013 on the approval of establishments producing sprouts rated 10 or less for 'type of food and method of handling' rated 0 for 'method of processing' 	<ul style="list-style-type: none"> Activity A: Common activities, plus the activities relevant to the method and techniques of official control being undertaken, which may include: <ul style="list-style-type: none"> Activity B1: Food hygiene specific activities Activity C2: Inspecting and auditing businesses
<p>Initial official food hygiene controls at establishments, other than those operating at the level of primary production, which:</p> <ul style="list-style-type: none"> from an initial desktop assessment are, in accordance with section 4.2.4.2 of the Code, not subject to initial official controls within 28 days are not subject to approval under Regulation (EC) No 853/2004 or the requirements of Regulation 	<ul style="list-style-type: none"> Activity A: Common activities, plus the activities relevant to the method and techniques of official control being undertaken, which may include: <ul style="list-style-type: none"> Activity B1: Food hygiene specific activities Activity C2: Inspecting and auditing businesses

Activity	Relevant activities within the Competency standard
(EU) No 210/2013 on the approval of establishments producing sprouts	
Due official food standards controls at establishments which have an inherent risk score of at least 4 and a compliance assessment score of at least 3	<ul style="list-style-type: none"> • Activity A: Common competencies, plus the activities relevant to the method and techniques of official control being undertaken, which may include: <ul style="list-style-type: none"> - Activity B2: Food standards specific activities - Activity C.2: Inspecting and auditing businesses - Activity C6: Assessing products, labelling and other information - Sub-activity C6.3: Assessing product labelling and information
Initial official food standards controls at establishments which from the initial desktop assessment, are anticipated to have an inherent risk score of 5	<ul style="list-style-type: none"> • Activity A: Common activities, plus the activities relevant to the method and techniques of official control being undertaken, which may include: <ul style="list-style-type: none"> - Activity B2: Food standards inspections - Activity C2: Inspecting and auditing businesses - Activity C6: Assessing products, labelling and other information - Sub-activity C6.3: Assessing product labelling and information

3.2.3.1 Qualifications with restrictions

The Code provides that where an officer holds a qualification with a restriction, their authorisation of legal powers and duties is restricted until the officer can demonstrate that they are competent to undertake the relevant restricted activities.

3.2.3.2 Qualifications with restrictions - food hygiene

To support Competent Authorities in determining whether officers are competent to undertake the restricted activities, table 2 sets out the relevant activities within the Competency standard.

Table 2: Relevant activities within the Competency standard for restricted activities

Restricted activity	Relevant activities within the Competency standard
Undertake inspection of food to determine fitness	Activity A: Common activities. Activity C6: Assessing products, labelling and other information. Sub-activity C6.1: Assessing whether food products are safe and fit for human consumption.
Seize and detain food	Activity A: Common activities. Activity E2: Formal enforcement action. Sub-activity E2.3 Detaining, seizing and voluntary surrender of food.
Undertake import control functions for fishery products	Activity A: Common activities. Activity F1: Import controls. Sub-activity F1.1: Import Controls for fishery products.
Serve RAN	Activity A: Common activities. Activity E2: Formal enforcement action.
Serve Hygiene Emergency Prohibition Notices (HEPN)	Activity A: Common activities. Activity E2: Formal enforcement action. Sub-activity E2.2: Prohibition procedures.

3.2.3.3 Qualifications with restrictions - food standards

The Code provides that officers, holding one or more of the following qualifications, awarded by Environmental Health Registration Board (EHRB), Institute of Food Science and Technology (IFST) or Scottish Food Safety Officers' Registration Board (SFSORB), may, if competent, be authorised to enforce the provisions of regulation 9 of The Food Information (Wales) Regulations 2014 in relation to the provision of allergen information in non-prepacked foods and food which is packed on the sales premises at the consumer's request:

- Higher Certificate in Food Premises Inspection
- Higher Certificate in Food Premises Inspection with Food Inspection Endorsement
- Ordinary Certificate in Food Premises Inspection

To support Competent Authorities in determining whether officers are competent to enforce the provisions of regulation 9 of The Food Information (Wales) Regulations 2014, the list below sets out the relevant activities within the Competency standard

as far as they relate to the provision of allergen information in non-prepacked food and food which is packed on the sales premises at the consumer's request:

- Activity A: Common activities
- Activity C6: Assessing products, labelling and other information
- Sub-activity C6.3: Assessing product labelling and information

3.2.3.4 Equivalency of qualifications

The Code provides that where prospective officers hold qualifications which are not included in the list of suitable qualifications, including those obtained from non-UK countries, the Competent Authority is to ensure equivalency of those qualifications before authorising the officer.

In these circumstances, it is recommended that either the Competent Authority employer or prospective officer directly approach the relevant awarding bodies for an assessment of equivalence against the relevant suitable qualification (fees may be payable).

The relevant awarding bodies include:

- CIEH
- CTSI
- IFST
- Royal Environmental Health Institute of Scotland (REHIS)
- SFSORB

These bodies are to inform the FSA of any determination concerning the assessment of qualification equivalency.

Existing and prospective officers may also hold qualifications and/or experience obtained in a country outside the UK, which are of a substantially similar standard to UK qualifications and provide individuals with substantially the same knowledge and skills (competency). For example, an individual seeks employment in the UK as a Public Analyst, Food Examiner, or an authorised officer, having acquired relevant qualifications and work experience in their home country.

In these circumstances, non-UK qualifications and experience can be considered, and enquiries may be made with the relevant professional and/or awarding bodies if they have any questions about this area before confirming an appointment.

The equivalence of non-UK qualifications can also be determined by the United Kingdom National Information Centre for the recognition and evaluation of international qualifications and skills.

3.2.4 Competency

Competency recognises that an officer's authorisation can be extended as they gain knowledge and develop new skills.

The Code provides that, before being authorised, officers and lead food officers are to demonstrate that they are competent for the activities relevant to their role and those they will be authorised to undertake.

To support Competent Authorities in determining whether an officer is competent, the FSA has published a [competency standard](#) which sets out the knowledge and skills for relevant activities that officers may be authorised to undertake. Any alternative competency standard is to be equivalent.

3.2.4.1 Competency assessment

The Code provides that competency is determined by lead officers through an appropriate assessment.

Officers, other than the lead food officer, may, if competent, assess competency and make recommendations to the lead food officer. However, the determination as to whether an officer is competent remains with the lead food officer.

Competent Authorities may use any of the following as evidence of how officers demonstrate that they are competent to undertake the activities relevant to their authorisation:

- academic and professional qualifications
- details of employment history, including functions undertaken, responsibility exercised, and experience gained
- details of official controls and other official activities carried out under the supervision of a competent officer
- successful completion of training courses, including short courses and e-learning, for example, on matters related to official controls, HACCP, or enforcement sanctions
- accompanied inspections/visits under the supervision of a competent officer
- having conducted a specific piece of work, for example, drafting of notices, production of witness statements, gathering evidence, building elements of a prosecution file, or conducting sampling to a specified protocol
- satisfactory performance of activities as part of internal performance appraisal/monitoring procedures
- doing any of the things suggested in section 3.3.1.2

3.2.4.2 Lead food officer competency assessment

The Code provides that the competency of lead food officers is determined through appropriate assessment.

The assessment of lead food officer competency may be undertaken by an appropriate manager, such as a service manager or senior officer responsible for the Competent Authority's food service.

The lead food officer competency assessment may also be undertaken by a competent lead food officer from another Competent Authority.

To support Competent Authorities in determining the competency of lead food officers, the Competency standard provides competencies for activities they may be authorised to undertake in their role, including specific lead officer activities. These specific activities include:

- D1.3: Investigating, reporting and management of incidents and receipt of alerts
- F6.1: Developing, implementing, monitoring, and reviewing documented policies, procedures, and plans
- F6.2: Collation/overseeing and reporting data

The Code recognises that more than one person may perform the lead food officer role. Due to this, not all lead food officers may necessarily demonstrate the competencies for all of the above activities.

To provide further assurances in lead food officer competency assessments, it is recommended that lead food officers participate in inter-authority audit and peer review. This will help with the development of consistent approaches to competency assessment.

3.2.4.3 Officers moving from one Competent Authority to another

Where an officer moves from one Competent Authority to another, it is recommended that the Competent Authorities cooperate and assist in the verification and transfer of relevant information and evidence with respect to qualifications, competency assessment, training and CPD records.

Additionally, when an officer has moved from one Competent Authority to another, it is recommended that the new Competent Authority provides a formal induction, including familiarisation of its policies and procedures.

3.3 Training and other Continuing Professional Development

The FSA recognises the need for all officers to update or refresh their knowledge and competency to adapt to the changing circumstances they work in, and for officers starting out in food law enforcement for the first time, or officers returning to food law enforcement after a break, to develop their knowledge and competency.

Training materials and e-learning courses are available via [FSA's communication platform](#) and on [Regulators' Companion](#).

3.3.1 Continuing Professional Development

CPD is how officers, including lead food officers, maintain, improve, and broaden their knowledge and skills, and develop the personal qualities and competencies to undertake their role. Many professions define CPD as a structured approach to learning to help ensure competence to practice, taking in knowledge, skills, and practical experience. CPD can involve any relevant learning activity, whether formal and structured or informal and self-directed.

Fundamental to a CPD scheme is the need for individuals to take ownership of their career progression.

3.3.1.1 Types of CPD

Regulation (EU) 2017/625 requires officers to receive training on subject matters set out in chapter 1 of annex II and on the obligations of the Competent Authority resulting from this Regulations.

The Code provides that those carrying out official food controls and other official activities undertake a minimum of 20 hours CPD each year. A CPD year could be a calendar year or a rolling 12-month period.

While the Code provides a minimum number of hours, extra hours may be required depending on the experience of individual officers and their area(s) of authorisation, any specific training needs or deficiency in competency identified at their annual reviews.

The Code provides for at least 10 hours CPD is spent on subject matters set out in chapters 1 of annex II of Regulation (EU) 2017/625 and on the obligations of the Competent Authority resulting from this regulation, relevant to the activities officers are authorised to undertake.

Examples of training and CPD on subject matters set out in chapter 1 of annex II of Regulation (EU) 2017/625, may include, but are not limited to:

- risk rating consistency exercises
- different control techniques, such as inspection, verification, screening, targeted screening, sampling, laboratory analysis, testing, and diagnosis
- control procedures
- requirements of food law
- assessment of non-compliance with food law
- hazards in production, processing, and distribution of food
- different stages of production, processing and distribution and the possible risks to human health, and where appropriate for the health of animals and plants, the welfare of animals and the environment
- the evaluation of the application of HACCP procedures
- management systems such as quality assurance programmes that FBOs manage and their assessment insofar as these are relevant to food law requirements
- official certification systems
- contingency arrangements for emergencies
- legal proceedings and the implication of official controls
- examination of written, documentary material and other records, including those related to inter-laboratory comparative testing, accreditation, and risk assessment, which may be relevant to the assessment of compliance with food law; this may include financial and commercial aspects
- control procedures and requirements for food entering the UK
- any other area necessary to ensure that official controls are carried out in accordance with Regulation (EU) 2017/625

The remaining 10 hours may include non-food related matters to support officers and lead officers in maintaining, improving or broadening their competency. Examples of relevant training and CPD may include, but are not limited to:

- attending training courses/conferences not linked to official controls but supporting professional development, for example, those related to investigatory skills
- attendance at court
- undertaking relevant distance learning or e-learning activities, for example, those related to evidence gathering

3.3.1.2 Ways of attaining CPD

The examples below are all ways in which officers can attain CPD, and include, but are not limited to:

- attending relevant training courses, including distance learning or e-learning activities
- coaching from other experienced, competent officers
- reviewing case studies and literature
- attending conferences or meetings which involve an element of learning
- reading to understand relevant legal and regulatory frameworks
- maintaining or developing specialist skills
- shadowing an officer who has demonstrated the relevant competencies
- taking part in a DGF audit or fact-finding mission
- shadowing experienced (internal or external) colleagues to develop knowledge of a specialist process, such as cheese-making; meat products; shellfish/fishery products
- participation in scenario-based case studies, such as notice drafting or risk-rating
- authoring relevant articles for peer-reviewed journals/papers
- writing guidance on food law or other legislative requirements
- preparing and delivering presentations to colleagues or businesses on legislative requirements, particularly new changes to legislation
- appropriate discussions with colleagues and/or FBOs on legal requirements/enforcement action which involve an element of learning

3.3.1.3 Evidencing and recording CPD

Most CPD is likely to be evidenced by the established practice of certification from a training provider. However, other means of supportive evidence may also demonstrate CPD, for example, publication in a peer-reviewed journal.

The Code provides that a record is kept of training and CPD. These records could be used as part of their annual review of training and CPD needs. Such reviews may be combined, where appropriate, with annual appraisals.

It is recommended that training and CPD records include, as a minimum, the following information:

- date of activity
- type of activity/activity description
- hours spent on an activity
- copy of certification or countersignature from a lead food officer, or another officer who can demonstrate the relevant competencies for the stated activity which took place

3.4 Officers undertaking import controls at Border Control Posts

The Code provides a range of activities that officers, if competent, can undertake at BCPs.

To support this, it is recommended that, as a minimum, the following activities and sub-activities within the Competency standard are relevant to official controls and tasks related to other official activities:

- Activity A: Common competencies
- Activity E2: Import controls
- Sub-activity E2.1: Import controls at point of entry
- Activity B5 Sampling
- Sub-activity B5.1 Taking formal samples
- Sub-activity B5.2 Taking informal samples
- Sub-activity E2.2: Import Controls for fishery products (only for official fish inspectors)

Where a Competent Authority authorises an officer to undertake enforcement, the enforcement activities within the Competency standard would also be relevant, for example:

- Activity D1: Informal enforcement action
- Activity D2: Formal enforcement action
- Sub-activity D2.2: Detaining, seizing and voluntary surrender of products

3.4.1 Official Fish Inspectors

The Code provides that where a BCP is approved for the importation of any fishery products, aquatic invertebrates, live bivalve molluscs (LBMs), live echinoderms, live tunicates, and live marine gastropods intended for human consumption, the Competent Authority may appoint suitably trained environmental health officers or other persons who are appropriately trained to perform official controls or certain tasks related to other official activities, to be official fish inspectors.

Any such official fish inspector would then have all the powers of an official veterinary surgeon in relation to those products⁷.

⁷ Regulation 12(4) of The Trade in Animals and Related Products Regulations 2011

Chapter 4 Delivery of official controls

4.1 Introduction

Chapter 4 deals with:

- the delivery of official controls, other official activities and activities related to these, such as non-official controls

4.2 Frequency of official controls

4.2.1 Food hygiene and food standards

Where a Competent Authority is responsible for undertaking official controls and enforcement of food hygiene, food standards and/or feed in an establishment, they may decide whether it is appropriate for officers to cover one or more of these areas during a single visit of an establishment, even though an official control is not due under the relevant planned official control programme.

4.2.1.1 Sources of information and intelligence

The Code provides that officers consider information and intelligence supplied by third parties when determining intervention ratings, both for food hygiene and food standards. Examples of sources of information may include:

- other Competent Authorities
- primary authorities or home authorities
- third party audits
- other sources, such as trade bodies

Further guidance on the role of intelligence in the food standards delivery model is provided in the Food Standards Delivery Model Guide.

Chapter 5 provides guidance on the FSA's National Food Crime Unit (NFCU) and how to share information with them should any intelligence received indicate potential food fraud.

4.2.2 Food Hygiene Rating Scheme and the intervention rating scheme

The food hygiene intervention rating scheme, set out in the Code, is the basis of the FTRS, which is operated by all Competent Authorities in Wales responsible for undertaking official controls in relation to food hygiene. Guidance on this is given in the FTRS [statutory guidance](#)

The elements of the food hygiene intervention rating scheme relevant to calculating the FTRS rating are:

- the level of (current) compliance with food hygiene and safety procedures
- the level of (current) compliance with structural requirements
- confidence in management/control procedures

Additional guidance on scoring each of the above three elements is provided in the annex 3.

Consideration of the control of cross-contamination, including any allergen-related contamination identified in preparing food specifically for consumers with a food allergy or intolerance, should be part of a business's food safety management system and comply with relevant allergen management legislation. Regulation 5 on allergens in the Food Information (Wales) Regulations 2014 relate to food labelling and information and as these are food standards requirements, they should not form part of an FGRS assessment. While risk rated as part of the food standards rating, the risk of allergen-related contamination should still be considered as part of a hygiene inspection and any non-compliances identified with the FBO (or representative).

4.2.2.1 Vulnerable risk groups

The food hygiene intervention rating scheme provides that an additional score of 22 is applied where establishments are involved in the production or service of high-risk foods intended specifically for consumption by consumers which are likely to include a vulnerable risk group of more than 20 persons.

The use of this additional score is considered on a case-by-case basis and is based on an officer's professional judgement as to whether high-risk foods are 'intended specifically' for a vulnerable risk group and whether it is for consumption by more than 20 persons.

In this context, 'vulnerable risk groups' are those that include people likely to be more susceptible to the effects of poor food hygiene such as those who are under 5 or over 65, and people who are sick or immuno-compromised.

A non-exhaustive list of establishments which could, depending on the circumstances, be considered within this category include hospitals, residential/nursing homes, overnight caring facilities, and children's nurseries/pre-school day care facilities.

Examples where this additional score would not be applied include:

- a restaurant, which, on occasion, serve a group of over 20 pensioners, as it is unlikely the business would be producing food specifically intended for a vulnerable risk group, so not included within this category
- a school, that serves the same lunch to all year groups, including those children under five, as it is unlikely that they are producing food specifically intended for a vulnerable risk group, so not included within this category
- a soft play centre designed for children aged from 1 to 10 years old, that serves the same food to all children, as it is unlikely that the business would be producing food specifically intended for a vulnerable risk group, so not included within this category

4.2.3 Primary production

The Code provides that the frequency of official controls at establishments operating at the level of primary production is determined by making best use of any information or intelligence that might indicate:

- consumers are being misled
- non-compliance with relevant food law

Examples of local or other intelligence are provided in the [primary production for hygiene inspection guidance](#).

4.2.4 Initial official controls

4.2.4.1 Initial desktop assessment

The Code provides that, when undertaking initial desktop assessments of new food business establishments, information supplied by the FBO when registering, and any other information deemed relevant, can be used to determine the potential hazard (food hygiene) or likely level of inherent risk (food standards).

In relation to food hygiene, the 'potential hazard' relates to part 1 of the food hygiene scoring system, in annex 1 of the Code. The potential hazard score considers the:

- type of food and method of handling
- method of processing
- consumers at risk, including consideration of vulnerable risk groups

The scores from these three elements in part 1 of the food hygiene scoring system are added together to give the overall 'potential hazard' score.

In relation to food standards, further guidance on determining the likely level of inherent risk is provided in the Food Standards Delivery Model Guide.

To support the initial desktop assessment, Competent Authorities may also consider information collected through communication with the FBO, as well as other information or intelligence available, including a review of the business' online presence.

4.2.4.2 Deciding when to undertake the initial official control

The Code provides that initial official controls of new food businesses are planned so that those with a lower potential hazard (food hygiene) or lower inherent risk (food standards) do not cause undue delays to the delivery of initial and/or due official controls at higher risk and/or non-compliant establishments. This does not apply to establishments subject to approval under Regulation (EC) No 853/2004 or the requirements of Regulation (EU) No 210/2013 on the approval of establishments producing sprouts, which receive an initial on-site visit as soon as practicable.

If, as part of the initial desktop assessment, information is received which indicates potential non-compliance at an establishment, this information may be used to prioritise the initial official control at that establishment, even though this would not necessarily impact the establishment's potential hazard score (food hygiene) or inherent risk profile (food standards).

Competent Authorities may also consider undertaking an initial official control as a priority where the business is unable to trade until the official control has been undertaken. This could include, for example, where the business is unable to trade on a market without an initial official control being undertaken.

Additionally, where an establishment has registered 28 days before the commencement of operations, the initial official control may be delayed until operations within the establishment have begun.

4.2.4.3 Appropriate methods and techniques for initial official controls

The Code provides that, in relation to food hygiene, establishments receive a physical inspection or audit for their initial official control. However, the following establishments, if an initial desktop assessment provides a potential hazard score of between 5 and 29, can receive any method and technique of official control (individually or a combination thereof), whether undertaken physically or remotely⁸:

- establishments which do not take or hold physical possession of food for resale to other businesses (for example, food brokers)
- establishments which are not generally recognised by consumers as being food businesses because the main business or activity is not food related
- certain establishments operating from private addresses

When determining the method and techniques of official control to use, including whether to undertake it physically or remotely, the Code provides that Competent Authorities consider whether the methods and techniques used:

- are effective and appropriate in the circumstances
- verify compliance with relevant food law
- enable validation of the desktop assessment

This does not apply to establishments subject to approval under Regulation (EC) No 853/2004 or the requirements of Regulation (EU) No 210/2013 on the approval of establishments producing sprouts, which receive an initial on-site visit as soon as practicable.

When considering the effective and appropriate methods and techniques to use in the circumstances, Competent Authorities should take other relevant guidance, such as the FHRs [Statutory Guidance](#) and the [Food Broker Guidance for Local Authorities into account](#). Consideration of other guidance may determine the methods and techniques of official controls that are effective and appropriate in the circumstances.

4.2.5 Due official controls

The Code provides that, based on the frequencies in the food hygiene and food standards scoring systems, official controls of existing businesses are undertaken within 28 days of their due date. The Code also provides that official controls at

⁸ Official controls should not be conducted remotely where a competent authority is legally required to provide a food hygiene rating to an establishment.

higher risk and/or non-compliant businesses, or those that are likely to be high risk, take priority over official controls at those which are lower risk and/or compliant.

This means that Competent Authorities prioritise official controls, so that those due at higher risk and/or non-compliant establishments are undertaken before those which are lower risk and compliant. However, official controls at all establishments would be undertaken within 28 days of them being due.

It is recognised that there may be circumstances outside the control of the Competent Authority, such as seasonal business closures, which means that the due official control can't be undertaken within 28 days of the due date. In these circumstances, it is recommended that Competent Authorities defer the due official control but undertake it as soon as possible.

4.3 Methods and techniques of official controls

The Code provides that Competent Authorities when determining the methods and techniques to use consider a range of factors, including which would be most effective and appropriate in the circumstances. To support this, it is recommended that Competent Authorities take other relevant guidance, such as the [FHRS statutory guidance](#), into account. Consideration of relevant guidance may determine the methods and techniques of official controls that are effective and appropriate in the circumstances.

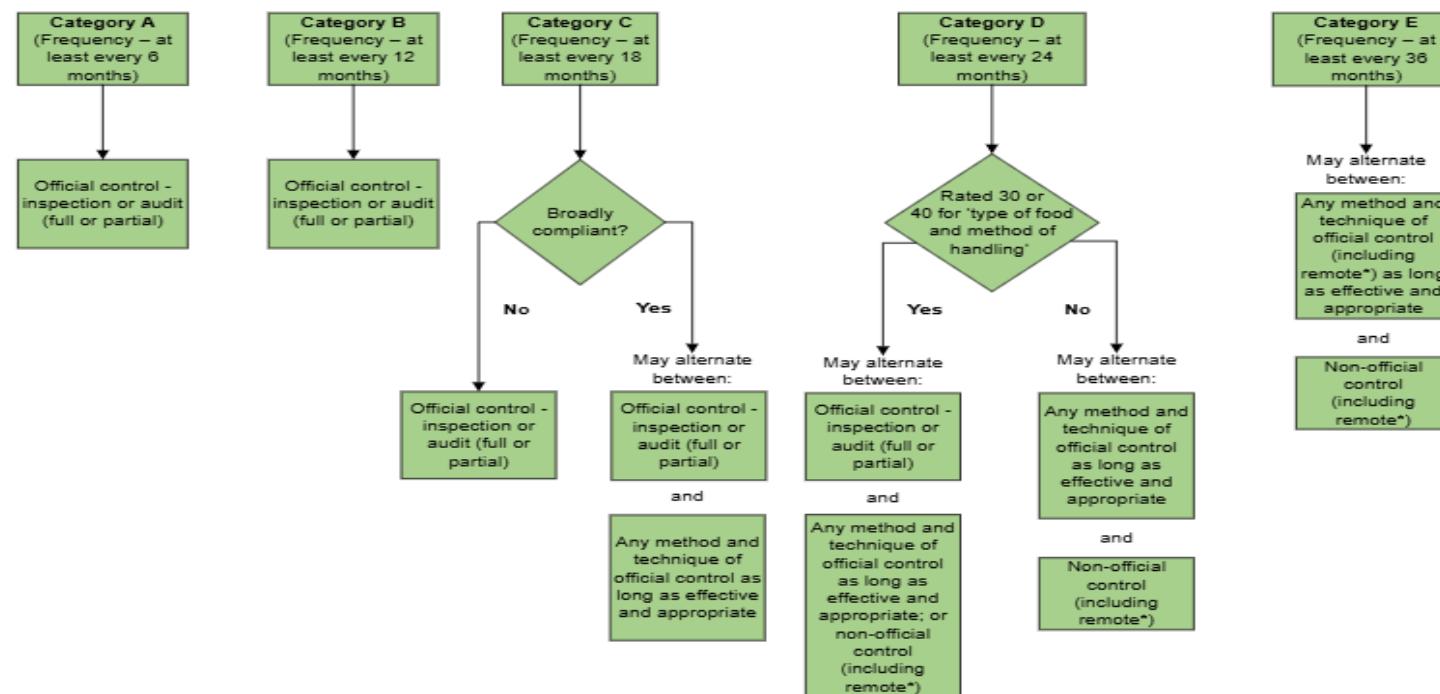

The methods and techniques of official controls set out in the Code relate to undertaking initial and due official controls. This would not prevent other methods and techniques of official controls and non-official controls being undertaken at other times and being recorded against the establishment, such as, for the purpose of monitoring enforcement.

Official controls should not be conducted remotely where a Competent Authority is legally required to provide a food hygiene rating to an establishment.

4.3.1 Food hygiene methods and techniques

The flowchart in Figure 1 sets out the methods and techniques of official controls that are effective and appropriate based on the risk rating of an establishment, as provided in chapter 4 of the Code.

Figure 1 – Food hygiene methods and techniques flowchart for establishments (other than those subject to approval under Regulation (EC) No 853/2004, those subject to the requirements of Regulation (EU) No 210/2013 on the approval of establishments producing sprouts (which should receive a physical inspection or audit (whether full or partial) irrespective of the intervention rating) and establishments operating at the level of primary production)

* A remote intervention is not appropriate if the establishment is subject to the provision of a FGRS rating

4.3.2 Remote official controls and non-official controls

The Code provides that, where appropriate, remote methods and techniques of official controls can be used, as long as they are effective and appropriate in the circumstances.

A remote official control is defined as an activity undertaken away from a food business establishment, that enables evidence to be gathered to verify the establishment's compliance with relevant food law. This could include:

- a desk-based examination of relevant documentation, which could include, for example reviewing completed survey responses, food safety management systems or monitoring records
- reviewing video and/or photographic evidence
- video - conferencing
- examination of websites, which could include, for example, reviewing the food information provided and any claims made
- any other digital tools which enable compliance to be verified away from an establishment

The Code also provides that, where non-official controls can be used, they may be undertaken remotely. Examples of remote non-official controls could include:

- providing advice, education, and/or training using remote technology, such as webinars
- gathering information and intelligence about a business through remote technology

Further guidance on non-official controls is provided in section 4.5 of this guidance.

4.3.2.1 Questionnaires

Questionnaires, if sent by post or email, may be considered a remote activity.

If the purpose of the questionnaire is to gather up-to-date information on the establishment, and does not verify compliance, then it could be considered a non-official control.

Conversely, if the questionnaire enables Competent Authorities to verify an establishment's compliance with relevant food law, then it could be considered an official control.

For a questionnaire to verify compliance, it would need to provide Competent Authorities with objective evidence, such as a copy of a food safety management system or other records, which they can examine and consider, to check an establishment's compliance with applicable food law.

If a questionnaire does not enable Competent Authorities to verify compliance with applicable food law, the information they provide may be used to support and inform official controls. For example, information provided through a questionnaire may inform the need for a partial inspection which could, depending on the risk rating of the establishment, be undertaken remotely.

4.3.3 Sampling, analysis and examination

Food sampling and subsequent analysis or examination performs an essential function by:

- providing intelligence and evidence on the safety and authenticity of food on the UK market
- supporting enforcement action to protect consumers
- enabling the FSA to meet its statutory obligations as a Central Competent Authority

The legislation (The Food Hygiene (Wales) Regulations 2006, the Food Safety Act 1990 and The Food Safety (Sampling and Qualifications) (Wales) Regulations 2013 The Food Safety (Sampling and Qualifications) (Wales) Regulations 2013) provides a framework for Competent Authority sampling, which is carried out with a view to taking formal enforcement action if results are unsatisfactory.

4.3.3.1 Procurement of samples

The Food Hygiene (Wales) Regulations 2006 and the Food Safety Act 1990 provide that samples may be procured either by 'purchasing' or 'taking'. The choice is at the discretion of the authorised officer, having regard to the policy of the Competent Authority.

Where the quantity or frequency of sampling gives rise to significant financial consequences for the owner of the food, the Competent Authority may offer an ex-gratia payment if samples are not purchased.

4.3.3.2 Avoiding contamination

The Code provides that contamination of samples is to be prevented. To support this, it is recommended that, when procuring samples, instruments and containers used are clean and dry. It is also advised that the use of cleaning and sterilising methods that might leave residues on instruments or containers (for example, alcohol) is avoided, as this could affect the results of the analysis or examination.

4.3.3.3 Continuity of evidence/traceability by Competent Authorities

The Code provides that continuity of evidence and traceability of samples is to be maintained and recorded at all stages, including the handling, storage and transport of the sample to the laboratory. To support this, it is advised that the following details are recorded at all stages:

- dates and times of transport
- identity of custodians
- date and time of receipt in the laboratory
- identity of the person receiving sample
- sample details (for example, temperature, batch number)

4.3.3.4 Continuity of evidence/traceability at the laboratory

Food samples are normally dealt with in a food laboratory, while specimens, such as faecal specimens, may be dealt with in a clinical laboratory, operating independently of the Competent Authority.

It is recommended that the Public Analyst, Food Examiner or Clinical Microbiologist is made aware that the results of their analysis or examination may be used as evidence in Court and they might have to give oral sworn testimony in court.

Other laboratory personnel might also be required to give evidence in a criminal prosecution in relation to the handling of food samples and faecal specimens and the testing and examination thereof. As such, it is recommended that individuals in laboratories are:

- reminded of the possibility of legal action, and in particular, the need to treat food samples and other specimens as evidence, to ensure the continuity of such evidence
- capable of making a sworn statement and providing sworn oral testimony on handling, testing and examination

Continuity preservation at the laboratory is vital so that there is certainty that the result relates to the sample/specimen submitted. It is recommended that full traceability in the laboratory is ensured, including recording the identity of everybody who has been involved in handling and examining the sample or specimen, and the action they took. To support this, it is advised that there is a system at the laboratory for logging the sample or specimen's arrival, and its storage, which is secure. For certain food samples, the temperature of transport may also need to be monitored and recorded on receipt at the laboratory.

4.3.3.5 Certificate issued by Public Analyst or Food Examiner

A Public Analyst or Food Examiner is required to give the officer who submitted the sample a certificate specifying the result⁹.

It is recommended that Competent Authorities discuss with the Public Analyst or Food Examiner how these requirements are to be met, including the means by which results that indicate a significant risk to public health, or where legislative deadlines apply, such as water in poultry, can be notified without delay.

The Certificates of Analysis or Examination (as specified in schedule 3 of The Food Safety (Sampling and Qualifications) (Wales) Regulation 2013) are available for formal samples on request from either a Public Analyst or Food Examiner.

⁹ Regulation 13(6) of The Food Hygiene (Wales) Regulations 2006 and section 30(6) of the Food Safety Act 1990

The laboratory issuing the test report and Certificate of Analysis or Examination are required to use test methods that are accredited to ISO/IEC 17025:2017 (General requirements for the competence of testing and calibration laboratories standard)¹⁰.

The test report and Certificate of Analysis or Examination are the only authoritative versions of the test results.

4.3.3.6 Requests for information from manufacturers or importers

The Code provides that Competent Authorities are to meet all reasonable requests from manufacturers or importers to provide information on the selection of the sample, sampling method and method of microbiological examination or chemical analysis. The reason for this is to enable the manufacturer or importer of the food to assess the result and/or repeat the examination or analysis.

4.3.3.7 Right to second opinion

Article 35(1) of Regulation (EU) 2017/625 requires Competent Authorities to ensure that operators, whose animals, or goods are subject to sampling, analysis, test, or diagnosis, in the context of official controls, have the right to a second expert opinion.

Guidance on [submitting a sample for a second expert opinion](#) and [submitting a referee sample to the Government Chemist](#) is available online.

4.3.3.8 Samples for analysis

The Code provides that the laboratory of the appointed public analyst is to be accredited for the purposes of analysis. Accredited laboratories appear on the [list of official laboratories](#).

4.3.3.9 Samples for analysis – division of samples

Regulation 7(1) of The Food Safety (Sampling and Qualifications) (Wales) Regulations 2013 requires samples for analysis to be divided into three parts, unless:

- the sample consists of sealed containers and opening them would, in the opinion of the officer, impede a proper analysis
- the officer is of the opinion that division of the parts is not reasonably practicable or likely to impede a proper analysis

The resultant parts of the sample are referred to as final parts.

Regulation 7(4) of The Food (Sampling and Qualifications) Regulations (Wales) 2013 allows for the sample to be submitted for analysis complete without division into three parts. Circumstances where this procedure may be used will depend on the analysis to be carried out, but could include the following:

¹⁰ Article 37(4) of Regulation (EU) 2017/625

- where there is insufficient product available to comply with the procedures in regulations 7(1) or 7(2) of The Food Safety (Sampling and Qualifications) (Wales) Regulations 2013
- there is no way of storing a final part for further analysis, for example, when testing for previously frozen meat
- where foods are not pre-packed and not homogeneous, meaning it is difficult to divide the food into three parts, so that each part contains the same proportion of each ingredient, such as meat products with lumps of meat

Additionally, regulation 7(2) of The Food (Sampling and Qualifications) (Wales) Regulations 2013 provides that where the sample consists of unopened containers and opening them would, in the opinion of the authorised officer, impede proper analysis, the sample may be divided by putting containers into three lots, with each lot being treated as a final part.

The sampling of imported foods at the point of entry may also pose difficulties. In these circumstances a sample need not be divided on the premises or in the presence of any representative of the seller/owner or importer, unless the legislation under which the sample is taken specifically requires otherwise.

The sampling of foods procured through distance sales, such as online or mail order, need not be divided in the presence of the FBO or any representative of the FBO, unless the legislation under which the sample is taken specifically requires otherwise.

Where any doubt exists as to how to sample a food, it is recommended that the Public Analyst is consulted.

4.3.3.10 Samples for analysis – sample quantity

The Code provides that the nature and quantity of any sample taken for analysis is such that, after it is divided into three parts, it would still be sufficient to enable the required analysis to be made.

The nature of the samples will depend on the purpose for which the analysis is being undertaken, and the quantity will vary according to the product and type of analysis to be carried out. It is recommended that the Public Analyst is consulted in case of doubt as to the quantity required.

The Code also provides that national sampling protocols are to be considered, where they exist. However, it is advised that some modification to the protocols may be necessary in the case of large consignments of imported foods.

4.3.3.11 Samples for analysis – containers for samples

Regulation 7(3) of The Food Sampling and Qualifications Regulations (Wales) 2013 provides that, if necessary, each part of the sample is placed in a suitable container and that each container is sealed.

To ensure the integrity of samples, it is recommended that samples of non-prepacked food or opened cans or packets, are placed in clean, dry, leak-proof containers such as:

- wide-mouth glass or food quality plastic jars
- stainless metal cans
- disposable food quality plastic bags

It is also recommended that samples of alcoholic drinks are placed in glass bottles.

These containers are then sealed securely after filling, so that they cannot leak or become contaminated during normal handling.

Where necessary, the samples may then be placed in a second container, such as a plastic bag, which is sealed in such a way as to ensure that the sample cannot be tampered with.

4.3.3.12 Samples for analysis – storage and transport of samples

The Code provides that parts of the sample are to be stored and transported appropriately to ensure their integrity.

To support this, it is recommended that final parts of food samples, which are perishable, are kept refrigerated or in a frozen state, as appropriate. The method of storage used will differ, depending on whether the final part is to be submitted to the Public Analyst, or retained for possible submission to the Laboratory of the Government Chemist in accordance with regulation 8(2) of The Food Safety (Sampling and Qualifications) (Wales) Regulations 2013.

Since retained final parts might need to be stored for several months, prior to submission to the Laboratory of the Government Chemist, it is important that they are appropriately stored.

Where doubt exists about suitable storage or transport arrangements for samples for analysis, it is recommended that the Public Analyst is consulted.

The Code also provides that the final part is submitted to the Public Analyst as soon as practicable after sampling. This is particularly important where tests are for substances which might deteriorate or change with time, for example, certain pesticides or sulphur dioxide.

4.3.3.13 Samples for analysis – notification of results

The Code provides that, if following the results, it is suspected that an offence is related to the manufacturer, they are to be informed of the results as soon as possible through the most effective means.

Notification through the most effective means may mean that notification is initially done by telephone, with the results then subsequently confirmed in writing.

The Code also provides that other relevant Competent Authorities are notified of the results as well. This could include the Competent Authority where the manufacturer is based, or the businesses Primary Authority (where relevant).

Other interested parties, such as the packer or, in the case of imported food, the importer, or their agent, may also be notified of the results.

4.3.3.14 Samples for examination

Regulation 13 of The Food Hygiene (Wales) Regulations 2006 requires samples procured under regulation 12 of those Regulations, which an authorised officer considers should be examined, are to be submitted to a Food Examiner.

The Food Safety (Sampling and Qualifications) (Wales) Regulations 2013 apply in relation to samples procured by an authorised officer under regulation 13 of The Food Hygiene (Wales) Regulations 2006, as if it were a sample procured under section 29 of the Food Safety Act 1990.

The Code provides that the laboratory of the Food Examiner is to be accredited for the purposes of examination. Accredited laboratories appear on the [list of official laboratories](#).

4.3.3.15 Samples for examination – organisation

Samples for examination are not required to be divided into three parts, since the non-homogeneous distribution of bacterial contaminants means that no two samples will be the same. It is not appropriate to retain a part for examination later in the event of a dispute, as bacteria might not survive prolonged storage or conversely, might greatly multiply.

4.3.3.16 Samples for examination – quantity of samples

The Code provides that the quantity of any sample procured is to be such as to enable a satisfactory examination to be made.

The quantity will vary according to circumstances but normally be at least 100 grams would be necessary.

It is recommended that the Food Examiner is consulted in case of doubt as to the quantity required.

4.3.3.17 Samples for examination – handling, transport, and storage

Regulation 9(a) of The Food (Sampling and Qualifications) (Wales) Regulations 2013 provides that, if necessary, the sample is placed in a suitable container and that the container is sealed.

To ensure the integrity of the sample, it is recommended that samples of non-prepacked food, or from opened cans or packets of food, are first placed in sterile leak-proof containers, or disposable sterile plastic bags. Containers would then be sealed securely after filling, so that they cannot leak or become contaminated during normal handling.

It is recommended that containers which might be easily damaged, or that cannot themselves be made tamper-evident, are placed in a second container, such as a plastic bag, which is then sealed in such a way as to ensure that the sample cannot be tampered with.

The Code provides that a copy of the food label (if available) and any other relevant details are to be given to the Food Examiner when submitting the sample. Examples of relevant details could include, food handling techniques and/or storage methods observed in respect of the food sampled.

The Code also provides that samples are to be handled, stored and transported appropriately to ensure their integrity.

To support this, it is recommended that advice is sought from the Food Examiner in case of doubt as to the handling, transport and/or storage of samples. Liaison with the Food Examiner, before samples are submitted to the laboratory, will ensure correct procedures are followed.

4.3.3.18 Samples for examination – notification of results

The Code provides that, if following the results, it is suspected that an offence is related to the manufacturer, they are also to be informed of the results as soon as possible through the most effective means.

Notification through the most effective means may mean notification is initially done by telephone, with results then subsequently confirmed in writing.

The Code also provides that other relevant Competent Authorities are notified of the results as well. This could include the Competent Authority where the manufacturer is based, or the businesses Primary Authority (where relevant).

Other interested parties, such as the packer or, in the case of imported food, the importer, or their agent, may also be notified of the results.

4.3.3.19 Faecal specimens

The Code provides that when investigating reported or suspected cases of foodborne illness and obtaining faecal specimens, the specimens are collected and transported to the laboratory as soon as possible after the onset of symptoms, with relevant individual's details included on the container and on any accompanying documentation.

It is important that faecal specimens are transported to the laboratory as soon as possible. The reason for this is that some important pathogens might not survive the pH changes that occur in stool specimens which are not promptly delivered to the laboratory, even if transported in a refrigerated state. Liaison with the laboratory will help ensure that the specimens receive prompt attention on their arrival.

It is also recommended that officers have a supply of appropriate leak-proof containers.

4.3.3.20 Scientific investigation of food complaint samples

It is recommended that authorised officers consider whether food that is the subject of a complaint needs any scientific investigation. Advice may be sought from the Public Analyst and/or Food Examiner who will be able to advise on the form of scientific investigation, particularly where a combination of analysis and examination is required.

If the authorised officer decides that a food complaint sample requires analysis or examination, it would be sent to the Public Analyst or Food Examiner, as appropriate. If any other investigation is necessary, the food would be sent to a suitably qualified expert who is able to give evidence in the event of prosecution.

The subject of a complaint, or other interested parties, might ask for a food complaint sample to be made available to aid in internal investigations. It is recommended that the Competent Authority complies with any reasonable request provided it does not compromise the proper storage, analysis, examination, or evidential value of the sample.

4.3.4 Inspections

The Code provides that when undertaking official controls, such as inspections, officers use professional judgement to determine what activities are examined to provide assurances that the relevant requirements of food law are being met.

4.3.4.1 Food hygiene inspections

When undertaking food hygiene inspections, it is recommended that Competent Authorities ensure officers, where appropriate:

- establish whether food is being handled and produced hygienically, and is safe to eat, having regard to any subsequent processing
- assess the hazards posed by the activities of the business and the FBO's understanding of those hazards, including, where appropriate, a discussion regarding any hazards that have been identified by the officer, which are not covered by the business' systems
- in respect of primary production, establish that FBOs and their employees have an understanding of the hazards posed by the activities of the business, and assess and verify that preventative/corrective actions necessary to protect the safety of food entering the human food chain take place
- confirm that the FBO is carrying out their own controls and checks, based on HACCP principles (other than in the case of primary production) and these are being operated effectively with appropriate corrective action being taken where necessary, this may include:
 - a physical inspection to determine whether critical controls have been identified and whether the controls are in place
 - a discussion with any staff responsible for monitoring and corrective action at critical control points to confirm that control is effective
 - a discussion regarding any failure to implement or monitor any critical controls that have been identified by the business
- assess the efficacy of the controls in place to manage the risk of cross-contamination between ready-to-eat foods and foods requiring further processing, including, where relevant, those relating to allergen-related contamination when preparing food specifically for consumers with a food allergy or intolerance
- assess the risk of the food business failing to meet food hygiene requirements

- assess compliance with the traceability requirements in article 18 of Regulation (EC) No 178/2002
- check the source and any health or identification marking of raw materials, and the identification marking and destination of finished products
- check compliance with product specific legislation
- recommend good food hygiene practices in accordance with relevant:
 - good practice guidance
 - recognised UK industry guides
 - industry codes of practice
 - sector specific codes
 - technical standards
- promote continued improvements in hygiene standards through the adoption of good practice
- draw the good food hygiene practices guidance (listed above) to the attention of FBOs

4.3.4.2 Food standards inspections

When undertaking food standards inspections, it is recommended that Competent Authorities ensure officers:

- consider the existence and effectiveness of management systems designed to ensure that food standards requirements are met and, where they exist, test their effectiveness
- assess compliance with composition, presentation, and food information requirements, including allergens, by examining advertisements, labels, descriptions, menus, claims, recipes, and other records
- assess compliance with the traceability requirements of article 18 of Regulation (EC) No 178/2002, as read with Regulation (EU) No 931/2011 on the traceability requirements for food of animal origin
- assess compliance with supplier specifications
- assess the risk of the food business failing to meet food standards requirements
- recommend good practice in accordance with relevant industry codes and other relevant technical standards

4.3.4.3 Concluding an inspection

The Code provides that officers discuss any non-compliances identified with the FBO or a representative. To support this, it is recommended that Competent Authorities ensure officers:

- on request, advise and discuss with the FBO the risk rating applied to the business
- consider whether further methods and techniques of official controls, or non-official controls, would be appropriate, for example education or training

4.4 Delivery of official controls and other official activities

Article 9 of Regulation (EU) 2017/625 requires official controls to be performed without prior notice, except where notice is necessary and duly justified for the control to be undertaken.

Examples where prior notification may be necessary and duly justified are, but not limited to:

- when the purpose of the official control is to see a specific process in operation, and that process cannot be seen without giving notice
- where the FBO or another person needs to be available, and they are not normally present
- where the nature of the official controls requires prior notification, for example, audit activities which go beyond the auditing of documentation that is readily available at the establishment
- when remote method and techniques are used, and the official control cannot be effectively undertaken without giving notice

It is recommended that officers exercise discretion when considering whether prior notification is necessary and duly justified, and that justification is recorded in accordance with the requirements of chapter 2 of the Code, guided by the overriding aim of ensuring compliance with food law.

4.4.1 Official controls of ships and aircraft

This section is intended to provide further guidance to enable officers to consider additional aspects relating to official controls of ships and aircraft. This section does not apply to:

- fishing vessels operating at the level of primary production – specific primary production [guidance](#) is available for these vessels
- vessels which are subject to approval under Regulation (EC) No 853/2004 – specific [guidance](#) on approval of establishments is available

4.4.1.1 General

The Food Hygiene (Wales) Regulations 2006 include any ship or aircraft in the definition of premises. However, schedule 4 of these regulations, which sets out specific temperature control requirements, does not apply to these means of transport. The relevant temperature requirements for ships and aircraft are stated in chapter IV of annex II of Regulation (EC) No 852/2004.

4.4.1.2 Hazards

The types of hazards that may be present in the shipboard/aircraft environment could be considerably different to those that might be found in fixed premises. For example, it could include hazards resulting from the:

- various sources of water and its storage in onboard tanks
- 24-hour nature of operations onboard ships and aircraft
- availability of provisions only when the vessel/aircraft is in port

- restricted storage space available for provisions (dry, chilled, and frozen)
- age of the ship/aircraft and the conditions on board
- fixed layout of food production facilities which cannot be expanded or changed due to structural and safety issues

The shipboard environment is essentially a closed community, sometimes for long periods of time during voyages, which presents particular problems in relation to the hazards associated with food production and the potential results of contamination. In large passenger ships, for example, the presence of food contaminated by food poisoning bacteria or toxins could be devastating, amongst both passengers and crew. Even on smaller vessels, or vessels with smaller crews, an outbreak of food poisoning could have a significant impact on the ability to sail the vessel safely because critical members of the crew may be incapacitated.

The scale of food production on board vessels varies greatly from large passenger vessels and cargo vessels with large crew and passenger numbers (for example, some cruise liners have over 3,000 passengers and 1,200 crew) to smaller vessels crewed by 10 to 15 personnel.

4.4.1.3 International catering waste

The disposal of international catering waste to landfill is regulated by The Animal By-Products (Enforcement) (Wales) Regulations 2014. WG has identified significant risks to animal health if this waste is not dealt with effectively at landfill.

4.4.1.4 Relevant information

The Code provides that Competent Authorities obtain all relevant information from other relevant parties. Examples of relevant information may include:

- food specifications/suppliers
- water sample results
- hazard analysis (HACCP)
- food temperature records
- food handler training records

4.4.1.5 Official controls and enforcement

In addition to the provisions of the Code in relation to undertaking official controls of ships and aircraft, it is recommended that reports of official control are also copied to any food safety advisers employed by the shipping operator or airline.

The Code also provides that when serving notices, in relation to ships and aircraft, officers contact the management company or the handling/shipping agent.

To support this, it is advised that when the service of notices is considered, officers are reminded that through case law, 'food business operator' does not necessarily mean 'owner', as it is the person who carries on the food business. It might be the company running a shipping operator or it could be a company hired to operate the food business. Authorised officers will need to establish who the FBO is in each case.

4.4.1.6 Craft registered outside the UK

Communications with other countries outside the UK regarding incidents is done via the FSA. If the ship or aircraft is registered in a non-UK country, it is recommended that the FSA are provided with full details of the incident to allow it to be raised with Competent Authorities in the relevant country. Further guidance on reporting incidents is provided in chapter 5.

4.4.1.7 UK military ships and aircraft

The Code provides that only military aircraft used for 'air trooping' are included in official control programmes. Additionally, no food business activities take place on 'armed forces' yachts.

When undertaking official controls on UK military ships and aircraft, authorised officers are advised to:

- refer to chapter 6 in relation to security considerations, as military ships and aircraft are regarded as Group 3 premises
- give prior notification before a proposed visit
- report safety issues identified during the official control, which concern UK military ships and aircraft, to single service environmental health leads and the relevant primary authority
- consider the purpose of military ships and aircraft, and recognise that the galley design may have been constrained for operational reasons
- give due consideration to military policy, procedures, and practices
- take account of the relevant parts of Joint Service Publication 456 – Defence Catering Manual

It is recommended that authorised officers contact the relevant primary authority for the Royal Navy, Royal Air Force and the Army, in relation to procedural guidance and prior to any proposed visit to a military vessel, aircraft or base. Details of the relevant primary authority can be found on the Primary Authority [register](#).

4.4.1.8 Official controls of ships

Ships or other vessels comprise a wide number of different types and have a wide variety of food operations on board. Some vessels serve members of the public, for example, ferries and cruise ships, whereas others operate with a permanent or semi-permanent crew on board and the food operation is purely for their own consumption.

In addition to the planned official control programme of land-based establishments, Competent Authorities also undertake official controls of vessels. Such official controls would normally be carried out whilst vessels are in port.

Official controls of vessels whilst at sea are not normally undertaken by officers of Competent Authorities. However, there might be circumstances when official controls can only be carried out when the factory vessels are moored offshore.

While a vessel can be approved by one Competent Authority, there is nothing to prevent an authorised officer of another Competent Authority from undertaking an official control of the vessel, as long as they are satisfied that:

- they have the appropriate legal authority
- they have contacted the Competent Authority that has approved the vessel
- the approving Competent Authority considers the official control to be necessary

Vessels engaged on international voyages require a Ship Sanitation Certificate under the International Health Regulations 2005, issued by the World Health Organization (WHO). Inspection for these certificates includes inspection of the food operations against a set of technical standards that are intended to apply globally (the [WHO Technical Handbook](#)), but the primary purpose of these is protection against diseases and conditions of public health concern.

For clarity, official controls referred to in this section are for food safety purposes rather than ship sanitation. However, where there is a potential crossover between the two, reference is made to accord with best practice under both.

Nothing in the Code or this guidance overrides or compromises the duties of Competent Authorities to inspect and ensure compliance by vessels with their duties under the International Health Regulations 2005, their related technical standards, and The Public Health (Ships) Regulations 1979.

4.4.1.9 Official controls of ships - decision to undertake controls and their frequency

The Code provides that the decision to undertake official controls of vessels for food safety purposes is based upon the following criteria:

- whether the food operation serves members of the public (whether paying or not)
- whether the vessel has its home port in the UK

When considering these questions, if the answer to both is yes:

- the vessel would be subject to an official control in a manner commensurate with inland food premises
- the frequency of official controls would be based on the intervention ratings set out in the Code
- the official control would be recorded on the Competent Authority's MIS and form part of their returns to the FSA

If the answer to either one of these questions is no:

- it will be the decision of each Competent Authority as to whether they deem an official control in relation to food safety appropriate, at any particular time, based upon the following criteria:

- type and size of vessel, for example general cargo, passenger vessel, passenger ferries, cruise vessels
- port of registration
- age, condition and history of vessel
- crew and passenger numbers, profile and turnover
- vessels trading pattern, schedule and previous ports of call
- confidence in food and water safety management systems
- available documentation
- recent significant reports of food related problems on the vessel
- certificates from previous official controls and previous level of compliance - these could include inspection certificates issued by Competent Authorities outside the UK
- the official controls may be recorded on the Competent Authority's MIS and form part of their returns to the FSA

If the answer to both questions is no:

- it would not normally be appropriate to carry out official controls in relation to food safety
- inspections may still be carried out for ship sanitation purposes, as per the three scenarios set out in annex 2 of the WHO [Technical Handbook](#), but would not form part of the Competent Authority's returns to the FSA

Visits to other vessels, such as training yachts, based at specific ports would be decided on the basis of number of vessels, local conditions and knowledge gained through previous official controls.

Ships may also be inspected for training purposes so long as the purpose of the visit is made clear to the master, and they agree to such an inspection taking place.

It is also recommended that shipping operators are made aware of their responsibilities in relation to providing information to the Competent Authorities.

4.4.1.10 Official controls of ships - undertaking official controls of vessels

The Code provides that when undertaking official controls of vessels, officers determine the scope of the food business activities taking place on the vessel and then use professional judgement to determine what activities are examined to provide assurances that the relevant requirements of food law are being met.

To support this, it is recommended that initial discussions with the ship's master, or representative, include consideration of any documentation that is available.

When undertaking official controls of vessels, authorised officers may consider the following:

- specifications and sourcing of food and water
- transport to the vessel, loading and subsequent storage
- the type of vessel

- the facilities, including equipment, used for food preparation, production, and storage
- the storage, distribution and quality of water used in the food areas or available for drinking purposes
- adequacy of procedures based on the HACCP principles, which will be dependent on the type of vessel
- food temperature requirements in annex II of Regulation (EC) No 852/2004
- the food handling activities being undertaken
- the food handlers' knowledge of food hygiene/own health status
- food and water sampling
- arrangements for international catering waste disposal
- pest control procedures
- any known adverse reports or cases/outbreaks of gastric illness

When there is evidence or suspicion of non-compliance, officers may need to focus the official control to relevant parts of the vessel.

4.4.1.11 Official controls of ships - action on conclusion of the official control

The Code provides that following an official control the ship's owner, as well as other relevant Competent Authorities and agencies are notified of the outcome of the control.

The recipient Competent Authority uses this information to ensure that, if necessary, follow-up action is taken, and that official controls are not undertaken more than once a year, unless there is a clear justification for doing so.

It is also good practice to send a copy of the report to the Competent Authority, in the UK, which had carried out any previous official control, in order that they may see what action, if any, had taken place as a result of their previous official control of the vessel.

4.4.1.12 Official controls of ships - liaison with the Maritime and Coastguard

If serious shortcomings relating to the existence of a health risk condition concerning food and water safety are identified whilst a vessel is in port (for example, there is a risk/imminent risk of injury to health as defined by regulation 7(2) and regulation 8(4) of The Food Hygiene (Wales) Regulations 2006), then it is advised that consideration is given to liaising with Welsh Government for the instigation of action to detain the vessel. Such deficiencies would also be reported to the Competent Authority of the state of registration of the vessel.

4.4.1.13 Official controls of ships – Food Hygiene Rating Scheme

Vessels, such as passenger ferries, which operate from, or are based in UK Ports, and are registered food businesses, may be within scope of FTRS. It is advised that

Competent Authorities consider whether it is appropriate to issue an FHRs rating, in particular, where the FBO (of the vessel) requests inclusion.

Vessels, such as passenger ferries, which operate from or are based in UK Ports, and are registered as a food business in Wales, will fall under the requirements of the Food Hygiene Rating (Wales) Act 2013 and related regulations.

In order to do this, vessels would need to be registered with the relevant Competent Authority as a food business and given an intervention rating in according with chapter 4 of the Code

4.4.1.14 Official controls of ships - primary authority and home authority

If appointed, the primary authority or home authority for the shipping operator (other than for military ships, which is covered in section 4.4.1.7) is advised to ensure that all relevant documentation is made available for liaison with, and the information of, other relevant Competent Authorities.

4.4.1.15 Official controls of aircraft - preparation

The Code provides that Competent Authorities are to obtain relevant information about the airline and aircraft to determine whether to undertake an official control.

To support this, it is recommended that the following information is obtained:

- named contact and contact details for an airline to deal with enquiries - this might be a food safety advisor employed by the airline
- number of aircraft, their type and registration numbers, where appropriate
- routes flown – long haul, short haul, and countries of destination
- airline food safety policy/procedure documents or manual
- type of catering menus and the service of high-risk foods
- food handler (cabin staff) knowledge, which may include up-to-date guidance notes/explanatory sheets and/or training commensurate with the food handling activity covering:
 - personal hygiene
 - handling of food
 - cross contamination issues arising from other duties
 - pest awareness
 - food temperature control (as required by annex II of Regulation (EC) No 852/2004) and monitoring
 - own health status and exclusion from work policy
- training records and standard of training, including re-training, when appropriate
- whether cabin crew prepare food on board the aircraft
- flight caterers, and/or nominated companies assembling and/or transporting meals to the aircraft, used by each airline

- in-flight menus – to assist in the assessment of whether high-risk foods are handled and/or prepared on board
- specifications in place with the caterer for the supply of food to aircraft and the accepted temperature for delivery, including for high-risk foods
- details of food and water safety arrangements when supplied to an aircraft in a non-UK location
- potable water supply, including details on:
 - the source
 - use of bowsers
 - cleaning/disinfection of storage tanks – with consideration as to frequency and effectiveness
- flights or routes with return catering including multiple sector catering, and from which airports
- pest control contract and monitoring
- cleaning contractor, with details of contracts, including cleaning schedules, and monitoring of the effectiveness of the cleaning regime
- reports of analysis/examination of food and potable water on aircraft by the airline
- any available reports of audits the airline undertakes of itself

Airlines are encouraged, where appropriate, to:

- adopt approved codes of practice, for example, the International Flight Services Association (IFSA) [World Food Safety Guidelines](#)
- develop in-house supplier and aircraft audits
- make any audit reports available to Competent Authorities

Such reports, where available, may form part of the Competent Authorities initial checks, and consideration given to the IFSA guidelines.

4.4.1.16 Official controls of aircraft - decision to undertake official controls

The Code provides that the decision to board an aircraft is based on:

- any information provided by the airline
- confirmation of the authenticity of the information
- the receipt of any food or food hygiene related complaints from passengers or crew
- whether there have been reported outbreaks of foodborne illness affecting the crew of the aircraft

In many cases, it would not be necessary to undertake official controls of aircraft on a regular basis if sufficient information has been obtained from the airline and/or relevant primary authority, which has been verified.

Initially authorised officers would satisfy themselves that any information provided by the airline regarding its food and water suppliers and supplies is satisfactory.

If such information is satisfactory, there might be no need to board an aircraft, particularly if the information shows that specific types of aircraft and food safety practices meet relevant requirements.

However, it is recommended that verification of on-board conditions and practices is undertaken on a regular basis by the most appropriate Competent Authority, with annual checks being made on the information provided by the airline concerning food hygiene issues.

The most appropriate Competent Authority to undertake these checks would either be the primary authority for the airline, or the relevant enforcing Competent Authority if no primary authority relationship exists.

It is advised that checks undertaken confirm that:

- there have been no changes to in-flight caterers or the source of water supply
- the in-flight caterer's HACCP plan is being implemented on board
- systems are in place after food and drink has left the flight catering establishment to establish if risks of contamination (including microbiological, physical, chemical, and allergenic) are controlled up to the point of service to the passenger

4.4.1.17 Official controls of aircraft - undertaking official controls of aircraft

It is recommended that official controls are undertaken:

- before passenger's board the aircraft
- after the aircraft has been cleaned
- when food is on board
- when airline staff are able to provide assistance and information

However, this would not prevent official controls being undertaken at other times, as necessary.

Official controls of aircraft may also be undertaken at the maintenance base, taking account of any documentation such as, food supply specifications, cabin crew training and food temperature control, that is supplied by the airline or their primary authority.

The Code provides that, if flights are in transit, official controls are only undertaken if necessary. The reason for this is that delays to aircraft are costly, and unless there is an imminent risk to the health of passengers or crew aircraft, operations are not to be interrupted. Competent Authorities are advised to consider the practicalities of their official control programme and endeavour to work with the relevant crew/ground staff to avoid unnecessary difficulties, taking into account that the primary objective of an airline is the safety of the aircraft, passengers, and crew.

When it is necessary for an authorised officer to board an aircraft, it is advised that the actual time spent on board is as short as possible, as most standard operating procedures would be included within the airline's documentation.

The Code also provides that if documentary checks cause any concerns, the relevant head office and/or relevant Competent Authority, such as the airlines primary authority, are notified, and that increased surveillance is considered. Examples of the increased surveillance could include, assessment of galley cleanliness or increased water sampling for analysis/examination.

Aircraft meals are mainly, but not exclusively, prepared prior to departure, some of which might be for return flights. Flight caterers or secondary food suppliers make details of meal ingredients available to their airline customers and relevant cabin crew will have access to this information so they can inform passengers who have allergies or food intolerances.

Where cabin crew do prepare food on board an aircraft, it is anticipated that their training would cover potential cross-contamination issues related to their other duties on board, such as handling sick bags and cleaning lavatories in-flight.

The Code provides that, when undertaking official controls on board aircraft, officers use professional judgement to determine what activities are examined to provide assurances that the relevant requirements of food law are being met.

To support this, when undertaking official controls on board aircraft, following a documentary check, authorised officers may consider/confirm the following matters:

- flight caterers – confirmation of the information obtained, regarding source of meals
- transport and loading of aircraft, including the means of temperature control of the food in the delivery vehicle
- food storage facilities on the aircraft, including the:
 - provision of insulated containers and/or icepacks
 - maximum stated time period until serving and/or re-heating
 - type of aircraft and whether it is intended for long or short haul flights
 - food served
- whether food is prepared on the aircraft and the facilities available for such operations, for example:
 - personal hygiene
 - avoidance of cross-contamination
 - provision of disposable gloves for certain duties and disinfectant wipes
- return flight meals, taking account of the shelf-life of the food
- temperature control (as required by annex II of Regulation (EC) No 852/2004) and monitoring during flights
- reheating/cooking
- pest control
- water supply – source and potability of water, cleanliness of tanks

- procedures for cleaning food handling areas, such as trolleys and carts
- food and water sampling

Further guidance is available on the Association of Port Health Authorities [website](#).

Additionally, a template form for airlines (the 'Airline Food Safety Questionnaire') is available through the Port Health at Airport Group on the [Knowledge Hub](#). This form may be adapted, where appropriate, as long as regard is also had to the Code.

4.4.1.18 Official controls of aircraft - primary authority and home authority

Where arrangements are in place, it is advised that the relevant primary authority or home authority provides relevant information to other Competent Authorities, when requested.

It is also recommended that the primary authority or home authority ensure that airlines are aware of their responsibilities in providing information.

4.4.2 Requirement for food safety management procedures based on HACCP principles

Regulation 5 of Regulation (EC) No 852/2004 requires food businesses (except primary producers, unless they are approved for sprouts) to put in place, implement and maintain food safety management procedures based on HACCP principles.

A food safety management system provides assurances that the business knows how to produce safe food, has procedures in place to ensure this, repeatedly produces safe food, and is capable of taking appropriate corrective actions when things go wrong.

4.4.2.1 HACCP flexibility

Article 5(4) of Regulation (EC) No 852/2004 provides that Competent Authorities, when considering procedures based on HACCP principles and the evidence required to demonstrate compliance, take account of the nature and size of the business. Additionally, article 5(1) requires FBOs to establish documents and records commensurate with the nature and size of the food business.

Recital 15 of the regulation allows for a degree of flexibility in the application of these principles and implementation of such procedures, particularly in small businesses, where traditional HACCP might be difficult to apply. The reason for the flexibility is that, in certain food businesses, it is not possible to identify critical control points and that, in some cases, good hygienic practices can replace the monitoring of critical control points'.

The European Commission has published a [Commission Notice](#) on the implementation of food safety management systems based on HACCP and flexibility in certain businesses. Commission guidance on flexibility, in particular, for traditional products/methods and other specific manufacturing, is also available on the Commission [guidance platform](#).

4.4.2.2 Food safety management systems

Larger businesses and manufacturers may develop and use traditional HACCP systems. While for small businesses, such as caterers, the [Safer Food Better Business](#) (SFBB) approach may be considered suitable.

Small food manufacturers may fall between those businesses where a SFBB type approach is suitable and larger manufacturing businesses with technical competence on the traditional HACCP approach. To support small food manufacturing businesses, the FSA has developed [MyHACCP](#), a free interactive web tool, that guides food businesses through the process of identifying food safety hazards and controls and the production of a documented food safety management system, based on HACCP principles. [Guidance](#) on using MyHACCP is also available.

Proper implementation of the appropriate support model constitutes compliance with the HACCP requirements of article 5 of Regulation (EC) No 852/2004.

4.4.2.3 Enforcement

Businesses are required to have in place effective food safety management systems. However, some businesses may be making progress towards having effective food safety management systems in place. In these circumstances, for businesses that are not a threat to public health, it is anticipated that formal enforcement action is only taken where the business has been:

- given reasonable opportunity to implement food safety management
- directed to appropriate training, if needed
- provided with appropriate guidance

The graduated approach seeks to educate businesses and improve their standards in realisable steps. Guidance material may be broken down in such a way, that the Competent Authority and business can agree how much progress is to have been made by their next visit.

Where fundamental skills are missing, it is recommended that Competent Authorities point businesses to appropriate sources where they can gain the necessary knowledge and skills, for example, signposting guidance materials, books, and courses.

4.5 Non-official controls

4.5.1 Advice, education, and coaching

The purpose of advice, education, and coaching is to provide guidance to businesses on achieving compliance with food law requirements and can be a key part of a Competent Authority's strategy to change behaviour and increase compliance in food businesses. The use of advice, education and coaching is encouraged whenever resources allow.

Advice, education and coaching may be delivered at the business establishment, remotely, or away from the food establishment, for example, through a business

forum or seminar. Advice, education, and coaching may also be targeted at specific types of food businesses or around specific food safety topics.

4.6 Records of official controls and non-official controls

The Code provides that records of official controls include:

- details of the officer undertaking the official control
- Competent Authority details
- food business details
- details of official control undertaken
- administrative details

To support this, it is recommended that, in addition to the details provided for in section 4.6 of the Code, the following information is included in the written records under each of these headings:

- details of the officer undertaking the official control, including:
 - name and designation
 - contact details
- Competent Authority details, including:
 - Competent Authority name and address
 - contact details of lead food officer or appropriate manager in case of dispute
- food business details, including:
 - trading name and address of the business, and registered address if different
 - name of the FBO/food business proprietor
 - type of business
- details of official control undertaken, including:
 - a description of the purpose of the official control
 - the control methods (methods and techniques) applied
 - specific food law under which the official control conducted
 - areas covered during the official control
 - documents and/or records examined
 - samples taken (where relevant)
 - key points discussed during the official control
 - the outcome of the official control and non-compliances identified, with a clear distinction between legal requirements and recommendations
 - where appropriate, action that the Competent Authority requires the FBO to take
 - timescales for addressing any non-compliances
 - where appropriate, the action to be taken by the Competent Authority
- administrative details, including:

- name of person (or persons) seen and/or interviewed
- date and time of official control
- signature of the officer undertaking the official control

4.6.1 Communication with multi-site businesses

When undertaking official controls at multi-site food businesses, the existence of primary authority partnerships or home authority relationships are also considered, and communications with the business undertaken accordingly. For example, the inspection plan issued by a primary authority may necessitate feedback from Competent Authorities.

Direct communications between Competent Authorities and multi-site food businesses would normally be with the head office unless the business has given a different address for communications to be sent.

4.6.2 Template forms

The Code provides that officers use professional judgement to determine what activities, at food business establishments, are examined during an official control. It is not necessary to consider every aspect of a food business at every official control. For example, a supermarket's in-store bakery or restaurant operated by that supermarket might not always need to be included during an official control of the supermarket. Although consideration should be given when awarding an FGRS score regarding the scope of inspection.

Forms, such as inspection forms, are intended to assist officers and businesses by introducing a structured approach to the official control process and is consistent with quality assurance practice.

4.7 Import controls

Significant volumes of food are routinely imported into Great Britain (GB), and it is important that effective arrangements are in place for Competent Authorities to check imported food both at BCPs and inland. All Competent Authorities have responsibilities for imported food controls.

The scope of the Practice Guidance extends to imported foods not of animal origin (FNAO) and illegally imported POAO but does not cover control activities for POAO at BCPs.

BCPs may be situated at seaports, airports, or international rail links, and are for POAO and certain high-risk FNAO from outside GB.

Except where a specific distinction is made, the Practice Guidance applies to all Competent Authorities, both inland and at points of entry, including PHAs. For the purpose of the Practice Guidance 'imported food' means food imported into GB; and 'point of entry' means a seaport, airport, or international rail link at which imported food is introduced into GB.

Competent Authorities with a point of entry provide the first line of control on imported food to ensure it is safe and complies with GB requirements. However, it is

important that controls are also in place at ETSF ships suppliers, international rail terminals, and other premises inland. The reason for this is that significant amounts of FNAO are not required to undergo checks at points of entry (specifically non-restricted FNAO, as all restricted FNAO would be subject to controls) and there is also the possibility that POAO may have entered GB illegally.

Further details of the roles and responsibilities of Competent Authorities and other Government Agencies and Departments can be found in the FSA's Resource Pack for [Inland Enforcement of Imported Food Controls](#). This resource pack also provides guidance for inland authorities on the effective monitoring of imported food.

A BCP Manual is produced by Defra for Competent Authorities that are responsible for imported POAO at BCPs. Defra has also provided [guidance on importing and exporting live animals or animal products](#).

4.7.1 Imported food procedures

The Code provides that official control programmes include imported food and considers all food businesses within their area that routinely import or sell food from outside GB.

To support this, it is recommended that Competent Authorities do not only focus on food businesses that specialise in the supply of food to specific minority groups, but also other businesses that routinely import or sell food from outside GB, particularly those that are the first destination after import. Such premises are likely to include:

- specialist supermarkets/retailers
- manufacturers
- warehouses

4.7.1.1 Identifying and recording inland food importers

The Code provides that Competent Authorities identify and record details of all food businesses in their area which import food.

To help identify food importers, Competent Authorities may:

- use details from food premises registration forms
- conduct desktop exercises using information sources such as local knowledge, telephone directories or internet searches
- use information from PHAs

Competent Authorities records may be refined further following visits to food business establishments, and/or communications with FBOs and other Competent Authorities.

4.7.1.2 Identifying imported food at points of entry

The Code provides that Competent Authorities with a point of entry are to be aware of the volume and nature of foods entering the port.

To identify imported food, Competent Authorities may:

- liaise with HMRC regarding food imported directly from outside GB or ports under T1 arrangements (a transit declaration made to HMRC, with T1 signifying that those goods that are not in free circulation, meaning they are still subject to Customs control)
- liaise with Internal Temporary Storage Facilities (ITSF) operators to obtain copies of cargo manifests
- undertake random checks of ITSF
- utilise informal notification systems in co-operation with importers, their agents, or airlines and ITSF operators

4.7.1.3 Points of entry details

The Code provides that Competent Authorities with points of entry maintain up to date information about points of entry in their area.

To support this, it is recommended that Competent Authorities ensure details on the following are reviewed and updated regularly:

- the port operator
- stakeholders, including importers and import agents in addition to airlines/shipping operators
- ITSF and ETSF
- trade type (volume, nature, frequency, and trade routes)
- port health and safety requirements
- security requirements including access to port/customs areas

4.7.1.4 Nominated officer for imported food

To ensure effective communication with Competent Authorities that have a BCP, details of the nominated officer(s) for imported food matters are notified to the FSA's Imported Food Team, by e-mail to lasupportwales@food.gov.uk.

The details to be provided include the name and contact details (telephone number and email address) of the nominated officer(s). It is also recommended that a general e-mail address for the Competent Authority is also provided.

If any details change, these can be notified using the same email address, and it is recommended that this is done as soon as practicable.

4.7.1.5 Data returns

The Code provides that Competent Authorities provide the FSA, such information or datasets as it may request.

In relation to imported food, this may relate to information:

- about the import of specific food or food products from certain countries
- required by the Welsh Ministers in connection with emerging animal/public health issues

- for inclusion in the Multi-Annual National Control Plan¹¹ or annual reports that GB produces

4.7.2 Monitoring of consignments

The Code provides that, where BCPs are authorised for certain higher risk commodities, Competent Authorities have access to facilities where imported food inspection can be carried out. Defra have issued further specific advice on operating procedures for sharing facilities at BCPs in their BCP Manual.

It is also recommended that Competent Authorities consider whether their officers have access to secure areas under the Aviation and Maritime Security Act 1990. Information on this can be obtained from the port operator.

Competent Authorities with points of entry which are not designated to handle certain higher risk FNAO products subject to safeguard measures are advised to ensure relevant port operators, local HMRC, or agents/importers are aware of any restrictions. It is also advised that arrangements are in place to deal with any such consignments which arrive at the point of entry.

4.7.2.1 No permanent presence at points of entry

The Code provides that Competent Authorities carry out checks at points of entry where there is no permanent Competent Authority presence, and it is not considered to be a point of entry for food, at least once every three months.

To support this, it is recommended that Competent Authorities contact the following to ensure they have updated information on food being imported:

- the port operator
- other relevant agencies
- HMRC
- other commercial operators

This may include a visit or questionnaire being sent.

4.7.2.2 Records of consignments and examinations

The Code provides that, where available, information relating to the number and type of food consignments is maintained, together with relevant information on the checks made to determine compliance with legal requirements. The reason for this is to enable consignment traceability and effective internal monitoring.

Where information is recorded, it is advised that the level of detail about food examinations (including those undertaken at ETSF or international rail terminals) and deferred examinations include:

- any identifying reference for the consignment examined
- country of origin

¹¹ Articles 110 and 111 of Regulation (EU) 2017/625

- information on the nature of the food
- information on the checks carried out and, where relevant, any enforcement action or sampling that has been undertaken
- the details of the agent and/or consignor/consignee.

4.7.3 Food not of animal origin

This section applies to Competent Authorities with a point of entry, checks undertaken at ETSF or international rail terminals, and deferred examinations under The Official Feed and Food Controls (Wales) Regulations 2009.

4.7.3.1 The Official Feed and Food Controls (Wales) Regulations 2009

FNAO import controls were harmonised by Regulation (EU) 2017/625 and Regulation (EU) 2019/1793 which sets out the FNAO products that are subject to increased levels of official controls.

The enforcement arrangements for these import provisions are provided by The Official Feed and Food Controls (Wales) Regulations 2009, and parallel legislation in Scotland, England, and Northern Ireland.

4.7.3.2 Other legislation

For certain areas, for example, contaminants, there are specific requirements for foods which can be applied at points of entry as well as inland. These requirements are implemented through separate legislation, but the powers to deal with non-conforming food at import are those contained in The Official Feed and Food Controls (Wales) Regulations 2009. [Guidance](#) on the contaminant's legislation is available.

4.7.3.3 Early warning system (EWS)

The UK has an EWS for risks associated with imported FNAO. This is an emerging risk detection tool which aims to protect UK consumers from the risks that may be associated with imported foods. It does this in two main ways:

- by predicting hazards (including salmonella, mycotoxins, pesticide residues, and sulphites), for specific food and feed from specific third countries for inclusion in legislation, such as annex I of Regulation (EU) 2019/1793 or other safeguard measures
- alerts Port Health Authorities and inland Competent Authorities to newly identified imported food issues, primarily FNAO but increasingly POAO

Intelligence from the EWS is disseminated monthly to facilitate local targeted enforcement and Competent Authorities who deal with imported food are recommended to take note of its proposals.

4.7.3.4 Non-GB country pre-export checks

The Welsh Ministers may grant reduced import checks on certain imported goods from specific non-GB countries¹². Such arrangements will be restricted to those countries where the Welsh Minister is satisfied that effective official controls are in place to carry out the appropriate pre-export checks immediately prior to export to the UK. Details of relevant products and countries outside GB will be notified to Competent Authorities, as appropriate.

This status can be repealed by the Welsh Minister in the light of information or experience. Where such arrangements are in place, Competent Authorities at points of entry would check relevant certification to validate such assurances. Particular consideration is given to consignments accompanied by certification from non-accredited laboratories. Where Competent Authorities have concerns relating to any such arrangements based on checks carried out, the FSA would be notified as soon as possible.

4.7.4 Liaison/referrals

The Code provides that, where points of entry identify situations where inland supervision of consignments is necessary and where checks at the point of entry reveal food safety or food standards concerns, they are referred to the appropriate inland Competent Authority.

Examples of the types of situations which may lead to a referral include where:

- a consignment of FNAO, which is subject to emergency controls or other restrictions, has been illegally imported, for example without being presented to the Competent Authority at the point of entry for the required checks to be carried out
- the Competent Authority at the point of entry is aware that illegal imports of POAO might have been distributed
- checks on imported food reveal labelling issues which cannot be enforced at time of import
- examination under The Official Feed and Food Controls (Wales) Regulations 2009 has been deferred
- unsatisfactory test results are received for samples taken for routine surveillance but meanwhile the consignment has been released from the port
- analysis indicates that foods, such as nuts, are not suitable for human consumption but are referred for feed use
- 'higher risk' FNAO transferred under detention to an inland ETSF facility to be supervised pending the outcome of laboratory tests

The Code also provides that referrals to inland Competent Authorities may be made by the FSA in relation to illegally imported POAO. This information will normally be

¹² Articles 73(1), 73(2) and 74 of Regulation (EU) 2017/625

received by the FSA from Border Force where they have intercepted illegal imports destined for commercial premises. Competent Authorities receiving these referrals are advised to provide feedback directly to Border Force, where requested.

Chapter 5 Incidents, alerts, and food crime

5.1 Introduction

Chapter 5 deals with:

- food incidents, hazards, and alerts
- how Competent Authorities are expected to respond and liaise with other Competent Authorities, government departments, delegated bodies, FBOs, the FSA, other relevant agencies and countries outside the UK
- the FSA's NFCU

5.2 Managing food incidents and alerts

5.2.1 Food incidents contacts

Guidance on incident reporting is available to Competent Authorities. Food incidents, where appropriate, can be reported by:

- using the [online report an incident form](#) or via [the FSA's communications platform](#)
- emailing an incident report form to FSA's Food Incidents Team at fsa.incidentswales@food.gov.uk
- Tel: 07789 926573 (also covers out-of-hours)

5.2.2 Action by the Competent Authority - responses to pre-incident contact by FSA

Potential food safety incidents may require the FSA to carry out scoping and assessment by contacting food businesses directly. At this stage of the process, these issues are not classed as food safety incidents: instead, they are potential food safety incidents.

Before contacting the business, the FSA will email the relevant Competent Authority to check if they are content for the FSA to contact the business directly. The FSA will use the contacts lists on the FSA's communications platform.

It is recommended that Competent Authorities provide a response within two hours, so that potential food safety issues can be acted on promptly. If a response is not received within this timeframe, the FSA will contact the food business, copying in the relevant Competent Authority on the email message.

If the Competent Authority does not consider it is appropriate for the FSA to email the business directly, perhaps because of ongoing investigations or pending legal action, the FSA will ask the Competent Authority to contact the business to establish if the business is in receipt of any affected product.

5.2.3 Food Incident notifications to the FSA

The Codes provides that Competent Authorities notify the FSA Incidents Team as soon as they become aware of a:

- serious localised food hazard

- non-localised food hazard
- withdrawal or recall of food by a FBO due to non-compliance with the food safety requirements of article 19 of Regulation (EC) No 178/2002
- significant 'non-hazardous' food incidents
- serious localised outbreak of foodborne illness in conjunction with notifying the Public Health Wales Communicable Disease Surveillance Centre
- suspected cases of food fraud/food crime (notification to the FSA's NFCU)

On receipt of a notification of a serious localised hazard, the FSA may request for additional information to enable and inform a scientific risk assessment for development of risk management advice or for the publication of a timely FSA alert notification.

It is recommended that the Competent Authority responds to the FSA, where possible within 48 hours of the request or indicate the estimated time necessary to provide an informed response. FSA requests for information in relation to an outbreak investigation may require a site visit to be arranged.

5.2.4 Information received locally that may indicate a wider problem

Competent Authorities are responsible for investigating and dealing with food that fails to comply with food safety requirements in their areas. Competent Authorities may identify potential problems in a number of ways such as:

- following microbiological examination or chemical analysis of samples submitted to a Food Examiner or Public Analyst respectively
- as a result of complaints from members of the public, either directly or through a third party, for example, the police, citizens advice
- through notifications from a manufacturing company, trade association, wholesaler, retailer, importer, or caterer
- information from enforcement agencies in other countries
- as a result of a notification from a general practitioner of one or more cases of communicable diseases, including food borne illness, or from the CCDC, or PHW – Centre of Infectious Disease, Surveillance and Control

Following consultation with the Food Examiner and/or Public Analyst, samples of relevant foods or ingredients and appropriate samples (for example, vomit and/or stool) from any persons affected are obtained where possible and sent for examination/analysis. These items can be critical in identifying the cause of the illness and may even save lives.

5.2.5 Root Cause Analysis

The Code provides that Competent Authorities undertake root cause analysis when they become aware that an FBO has withdrawn or recalled food from the market.

The root cause analysis may identify the initiating cause, in a causal chain, which led to the withdrawal or recall; and also, the stage at which intervention could reasonably

be implemented to mitigate risk and prevent future reoccurrence of the non-compliance.

A root cause analysis reporting form and e-learning course for FBOs are available on the [FSA website](#).

5.3 Liaison with countries outside the UK

5.3.1 The European Commission's Rapid Alert System for Food and Feed

The Rapid Alert System for Food and Feed is a network managed by the European Commission to facilitate communications between members of the network in responding rapidly to serious direct or indirect risks to human health relating to food and feed.

5.3.2 Communications with countries outside the UK

Subsequent communications to enquiries from countries outside the UK should be sent to the FSA via the appropriate mailbox:

- Imports: imported.food@food.gov.uk
- Exports: thirdcountryexports@food.gov.uk
- Incidents: fsa.incidentswales@food.gov.uk

5.3.3 Disclosure of information to countries outside the UK

If circumstances arise where this is required, then confidentiality, data protection and human rights issues will need to be considered. The Competent Authority are to take account of the contents of its own publication scheme under the Freedom of Information Act 2000 and apply the law and general principles set out in relevant legislation and case law. This is best done at a local level, with local administrators consulting their own legal department.

Competent Authorities are to ensure that any release of information complies with national legislation including, that relating to Freedom of Information and Data Protection laws.

5.3.4 Use of overseas evidence in criminal proceedings

Evidence can be obtained from other countries for use in criminal proceedings in the UK. The primary method of obtaining overseas evidence for use in UK criminal investigations/proceedings is through Mutual Legal Assistance (MLA).

The UK has entered into a number of international bilateral agreements in relation to [MLA](#). The UK has also ratified the 1959 Convention on Mutual Legal Assistance in Criminal Matters. Additionally, the EU-UK Trade and Cooperation Agreement includes provisions regarding MLA, which expand upon the provisions of the 1959 Convention.

Where the UK has entered into a bilateral agreement with another country in relation to MLA, the procedures laid down in that agreement are to be followed. The UK can provide MLA to any country in the world whether or not such an agreement is in place.

Requests for evidence from another country are called 'International Letters of Request' (ILOR) and UK requests are made in accordance with the Crime (International Co-Operation) Act 2003 (CICA 2003). Under domestic legislation, such requests need to be made by either a judicial authority or, in certain circumstances, a designated prosecuting authority.

A number of authorities have been designated by virtue of Designation Orders under CICA 2003, for example Crown Prosecutors. Requests may generally be sent directly to the appropriate overseas authority, however, there are circumstances where the request will need to be transmitted via a central authority. The primary central authority which deals with MLA for Wales, England, and Northern Ireland is the UK Central Authority (UKCA).

The UK Central Authority address is:

[UK Central Authority](#)

Public Safety Group
Home Office
6th Floor, Fry Building
2 Marsham Street
London
SW1P 4DF
Tel: 0207 035 4040

Email: UKCA-ILOR@homeoffice.gov.uk

Evidence obtained through MLA can only be used for the purposes it has been provided. Therefore, should a UK authority, wish to use information already obtained for a different purpose, the sending country's further consent would need to be sought. Similarly, if the UK has received information from another country outside of the MLA process which it now wishes to use as evidence in proceedings, the sending states specific consent will be required to use the information in this way, and it may be necessary for an ILOR to be issued.

Further [guidance regarding MLA](#) can be found on the [GOV.UK website](#) or if there are specific enquiries contact should be made with UKCA.

5.4 National Food Crime Unit

The FSA's NFCU works with partners to protect consumers from serious food / feed fraud and related criminality within the food and feed supply chain. Food crime can impact the safety or authenticity of food and drink, which is harmful to consumers, food businesses and the wider food industry.

Competent Authorities can investigate fraud within the food supply chain. Intelligence from Competent Authorities, including that logged via the Intelligence Database (IDB) system, enriches NFCU food crime intelligence assessments. The NFCU's Outreach and Prevention team also provide a focal point for engagement with Competent Authorities via Regional Intelligence Officers, including supporting the dissemination of relevant intelligence to Competent Authorities.

The NFCU investigation command will investigate the most serious and complex cases of food fraud. When determining whether to commence or adopt an investigation, relevant factors which will be considered by NFCU will include the scale of offending, the degree of planning and co-ordination, the impact of the fraud across geographical regions and boundaries, and the financial loss and other harm to the public and industry.

More details on the NFCU are available on the [FSA website](#).

5.4.1 Reporting suspicions of food crime to the Unit

Competent Authorities can share information with the NFCU by:

- emailing foodcrime@food.gov.uk
- contacting the Unit on 0800 028 1180
- using the [online form for the reporting of intelligence](#)
- logging an intelligence report on IDB

Chapter 6 Enforcement

6.1 Introduction

Chapter 6 deals with:

- powers of entry
- actions available to Competent Authorities when dealing with suspected or established non-compliance
- approach to enforcement when dealing with established non-compliance

6.2 Powers of entry

6.2.1 Powers of Entry, Inspection and Seizure and the Human Rights Act 1998

The right to privacy and respect for personal property are key principles of the European Convention on Human Rights, which the Human Rights Act 1998 gives further effect to.

Powers of entry, inspection and seizure need to be fully and clearly justified before use because they could significantly interfere with the occupier's privacy, and consideration given as to whether the necessary objectives can be met by less intrusive means. It is recommended that authorised officers:

- exercise their powers courteously and with respect for persons and property
- in circumstances where a warrant has been obtained and is appropriate, only use reasonable force when this is considered necessary and proportionate to the circumstances

Examples of some food legislation which contain powers of entry can be found in Table 3, below.

Table 3 – Examples of provisions containing powers of entry

Food legislation	Provisions
The Food Hygiene (Wales) Regulations 2006	Regulation 14 of these regulations permits an authorised officer to enter premises to undertake official controls.
The Official Feed and Food Controls (Wales) Regulations 2009	Regulation 39 of the regulations may be used by authorised officers to enter a premises for the purpose of ascertaining whether there has been any contravention of the import provisions of these regulations in relation to food.
The Trade in Animals and Related Products Regulations 2011	Regulation 33 of these regulations provides powers of entry to authorised officers for the purpose of enforcing the provisions of the regulations, including requirements on the importation of POAO.

Food Safety Act 1990	Section 32 of this Act permits an authorised officer to enter premises to undertake official controls.
----------------------	--

Where food legislation provides powers of entry, they generally enable authorised officers to take with them such other persons as they consider necessary, for example, section 32(4) of the Food Safety Act 1990. This would include, for example, any officer assisting the authorised officer, or suitably qualified or skilled person. This could also include an expert in a particular field whose presence is needed to accurately identify the material sought or to advise where certain evidence is most likely to be found and how to appropriately deal with it. These provisions do not confer on the accompanying person any of the powers of an authorised officer, but they do give that person the right to be on the premises during the authorised officer's official control without the occupier's permission.

However, regulation 33 of The Trade in Animals and Related Products (Wales) Regulations 2011 limits the number of other persons that can accompany an authorised officer, up to a maximum of three.

Powers of entry may also provide an authorised officer with powers to seize and detain any records which the authorised officer has reason to believe may be required as evidence in proceedings, for example, section 32(6) of the Food Safety Act 1990 and regulation 16(7) of The Food Hygiene (Wales) Regulations 2006.

6.2.2 Police and Criminal Evidence Act (PACE) Code B Notices

There is no obligation on authorised officers to issue routinely a PACE Code B Notice when undertaking their statutory duties in a food establishment to verify compliance with food law.

A PACE Code B Notice, which sets out the powers of authorised officers and rights of occupiers, is used in those circumstances where authorised officers are carrying out a directed search.

A directed search can be defined as looking for something predetermined as relevant to a suspected or alleged offence and may be appropriate as part of an ongoing investigation, for example, in response to a complaint where evidence of suspected offences may already exist.

Ultimately a decision to serve a PACE Code B Notice will depend on the individual circumstance of the matter under investigation. Authorised officers are recommended to seek further guidance from their Competent Authority's own legal counsel if further clarification is needed.

PACE Codes of Practice including PACE Code of Practice B can be found on the [Home Office website](#).

6.3 Enforcement action

6.3.1 Hierarchy of enforcement

The primary objective of any enforcement action is to achieve compliance in the most effective way and the approach taken is to be in line with the 'hierarchy of enforcement'.

The Code provides that Competent Authorities take account of the full range of enforcement options, which would include:

- educating and providing advice to FBOs
- informal action
- detention and seizure
- Hygiene Improvement Notices/Improvement Notices
- RANs
- Fixed Penalty Notices
- HEPNs/Emergency Prohibition Notices (EPN)
- prosecution

6.3.2 Advice and education

The practice of giving advice, and communicating by letter about enforcement issues, are well-established approaches. Such measures are therefore encouraged whenever they are likely to secure compliance with the requirements of food law within a time that is reasonable in the circumstances.

6.3.3 Determining appropriate enforcement action

The Code provides factors to be considered when determining appropriate enforcement action. It is recommended that consideration is also given to:

- sensitivities around an issue, which could lead to:
 - loss of consumer confidence
 - economic loss to industry
- whether formal action is in the public interest
- the potential for non-compliant foods being distributed widely with large numbers of consumers affected
- an assessment of the FBOs willingness to undertake the work identified by the officer
- collaboration with the primary authority or home authority, if applicable
- any Primary Authority Advice issued by the primary authority
- the Code for Crown Prosecutors
- the Regulators' Code

When determining appropriate enforcement action, it is recommended that the Competent Authority consider whether a Primary Authority Partnership or Home Authority is in place.

If a partnership is in place, any intention to carry out such action needs to be communicated to the FBO, Primary Authority and/or Home Authority, where there is one. Where there is a Primary Authority, notification of the proposed enforcement

action would be in accordance with [statutory requirements](#) of the Primary Authority scheme.

Directions issued by a Primary Authority would also need to be considered by the Competent Authority, where relevant.

Competent Authorities are recommended to consult their own legal departments when considering formal enforcement action.

Having determined the appropriate method(s) of enforcement action, it is recommended that authorised officers be prepared to discuss advice, decisions and correspondence with the FBO.

6.4 Food hygiene and food standards notices

6.4.1 Introduction

This section provides information regarding the use of:

- Hygiene Improvement Notices
- Improvement Notices
- Fixed Monetary Penalty Notices
- Warning Notices
- Enforcement Notices
- Prohibition Notices (served under The Wine Regulations 2011)
- Non-compliance Penalty Notices
- Enforcement Cost Recovery Notices

6.4.2 When to use a notice

Provisions for the use of notices are set out in legislation and may be appropriate in any of the following circumstances, or a combination thereof, where:

- formal action is proportionate to the risk to public health
- there is a record of non-compliance with breaches of the food legislation
- the authorised officer has reason to believe that an informal approach will not be successful

6.4.2.1 When not to use a notice

Provisions for the use of notices are set out in legislation and the Code, and may not be appropriate in the following circumstances, where:

- the contravention may be a continuing one and a notice would only secure an improvement at one point in time, for example, personal cleanliness of staff
- in transient situations where swift enforcement action is needed, for example, a one-day festival or sporting event (a HEPN may be more appropriate to achieve an immediate effect)
- there is a breach of good practice but no failure to comply with an appropriate regulation
- the legislation does not provide for a notice in that particular situation

In circumstances where the FBO would have no obligation to withdraw products under article 19 of Regulation (EC) No 178/2002, a notice cannot be used to require withdrawal.

6.4.3 Drafting of notices

It is recommended that notices are clear and easy to understand.

An authorised officer who has decided to serve a notice may need to consider whether a single notice with a single time limit is appropriate.

It may be possible to cite more than one non-compliance in a notice provided the:

- issues are of the same theme
- action required of the FBO can rectify all the failures cited on the notice
- time frames for compliance are all the same

Simplicity is often better and the FBO needs to be able to understand the notice. Any time frames for compliance need to reflect the escalation of each issue.

Using multiple notices, each with a different time limit, may be more appropriate where there are multiple contraventions. Separate notices with separate time limits may also be easier to handle if there is an appeal.

An appeal against a single notice concerning multiple contraventions would result in the suspension of the whole notice until the appeal had been dealt with. Additionally, if one contravention on the notice is complied with while others remain outstanding, there is a question about whether the notice has been complied with or not.

It is recommended that before a notice requiring structural work is issued, the authorised officer discusses and agrees the detail of any such work with the FBO or a person, acting on the FBO's behalf, who is in a position to authorise the work. However, the issuing of a notice is not to be unduly delayed if agreement cannot be reached or a responsible person cannot be contacted.

It is the FBO's responsibility to obtain any necessary planning permission and/or building control approval to undertake building works to improve the structure of the establishment.

6.4.4 Works of equivalent effect

Where notices allow an FBO to carry out equivalent measures to those set out in the notice, for example, Improvement Notices, it is recommended that any equivalent measures are first discussed with the authorised officer who served the notice.

It is recommended that the Competent Authority respond in writing to any request from a FBO to vary the work, and any agreed alternative measures be confirmed in writing. Ultimately, it is for the FBO to decide how they will comply with the objectives of the legislation.

Disputes are advised to be considered by the Competent Authority's:

- lead food officer
- head of service

- another appropriate senior manager

Where notices do not state that works of equivalent effect may be taken, it is recommended that Competent Authorities still take into consideration any alternative measures suggested by the FBO to remedy the contravention.

6.4.5 Time limits

Notices are required to clearly state the time limit by which the measures are required to be completed or the penalty paid. The time limit can vary depending on the type of notice being served

Notices may require:

- a minimum time period, for example, a Hygiene Improvement Notice under The Food Hygiene (Wales) Regulations 2006 requires a minimum 14-day period to be given
- the time to be no less than the time for appeal, for example, Compliance Notices under The Quality Schemes (Agricultural Products and Foodstuffs) Regulations 2018 require the time limit to not expire within the 28-day appeal period
- no minimum period of time, for example, Improvement Notices under The Food Information (Wales) Regulations 2014, which if reasonable, allows for the immediate rectification of the non-compliance

As an appeal can be lodged against the time limit, it is advised that they be realistic, justifiable, and have regard to the extent and complexity of the measures required.

It is good practice to discuss and agree the time limit with the FBO or with a person acting on the FBO's behalf who is in a position to agree a time limit, before a notice is issued. The authorised officer may, however, set a time limit without such agreement if agreement cannot be reached or a responsible person cannot be contacted.

Factors to consider when setting a time limit include the:

- risk to public health
- nature of the problem
- availability of solutions

6.4.5.1 Extension of time limits

Although notices are to be complied within the stipulated time limit, Competent Authorities may consider giving due regard to any genuine difficulties that may occur in achieving compliance by that deadline.

There are no specific provisions in the regulations to extend the time limit for compliance with a notice. However, it may be reasonable to allow an extension if the FBO has provided a genuine reason for needing more time. If the FBO requests an extension to the time limit specified in the notice, it is recommended this be made in writing and be received prior to the expiry of the notice.

Before issuing a new notice, consideration as to whether the conditions prevailing at the premises still warrant the issuing of another notice is required. If the authorised officer is satisfied that there is a genuine reason for an extension, it is recommended they record the reasons for their decision on the relevant establishment file. The existing notice is to be withdrawn, and a new notice issued reflecting the new time limit by which compliance is to be achieved.

It is recommended that the authorised officer never issue such a notice automatically. When deliberating a request for an extension, the authorised officer may consider whether the facts justify such an extension, taking account of:

- the reason for the request
- the remedy involved
- the risk to public health associated with the fault if an extension was granted
- past record of co-operation of the FBO
- any temporary action which the FBO proposes to take to rectify the non-compliance
- demonstrable evidence of steps taken to address the requirements contained in the notice

The following provisions allow authorised officers to serve further notices amending the original notice:

- Improvement Notices under The Food Additives, Flavourings, Enzymes and Extraction Solvents (Wales) Regulations 2013
- Warning Notices, Enforcement Notices and Prohibition Notices under The Wine Regulations 2011
- Compliance Notices, Non-Compliance Penalty Notices and Enforcement Costs Recovery Notices under The Quality Schemes (Agricultural Products and Foodstuffs) Regulations 2018

6.4.6 Methods of serving a notice

Notices are required to be served according to the requirements of the specific legislation, for example, Hygiene Improvement Notices are to be served in accordance with regulation 28 of The Food Hygiene (Wales) Regulations 2006.

Generally, notices can be served:

- by delivering it to that person
- in the case of an incorporated company or body - by delivering it to their secretary or clerk at their registered or principal office, or by sending it in a prepaid letter addressed to them at that office
- in the case of any other person - by leaving it, or sending it in a prepaid letter addressed to them, at their usual or last known residence

It is important to identify the person (FBO) where possible. However, under some legislation, such as section 50 of the Food Safety Act 1990, if it is not practicable after reasonable inquiry to identify the person to serve the notice on, the notice may be addressed to the 'owner' or 'occupier' and left at the named premises.

It is recommended that the authorised officer serving a notice ensures that the person who is responsible for taking action also receives a copy, especially where the local manager is not the FBO.

A notice can be served on a person outside of the Competent Authority area provided there is a contravention inside the Competent Authority area.

It is recommended that notices are served on the FBO by the authorised officer who signed the notice. However, notices may be served by a different authorised officer who is competent to explain the purpose of the notice and any steps to be taken and be able to deal with obstruction.

The document can be sent electronically to the operator/proprietor for information in advance of its formal service. However, a hard copy also needs to be provided for it to be properly served. It is recommended to record the time of service, even when the postal service is used, and to keep proof of postage.

6.4.7 Appeals

The legislation that provides for notices include appeal mechanisms so that a person who is aggrieved by the service of a notice can appeal it.

All notices are required to clearly indicate that there is a right of appeal and provide details of how that appeal can be made, including the name and address of the relevant local court or body the appeal can be made to.

It is recommended that the recipient be asked to notify the Competent Authority if an appeal is lodged.

Although all notices can be appealed, the mechanisms for appeals differ, and authorised officers need to be aware of the different appeal mechanisms. An overview of these mechanisms can be found in Table 4 below.

The time limit to apply to the First-tier Tribunal (General Regulatory Chamber) and/or Magistrates' Court varies depending on the specific legislation that a notice has been served under. It is recommended that Competent Authorities review the specific rules governing the type of appeal, and associated timescales, before serving a notice.

Further information on [appeals to the First-tier tribunal](#) and [appealing an Improvement Notice](#) under The Food Information (Wales) Regulations 2014 can be found on www.gov.uk.

Table 4 – Appeals

Type of notice	Legislation	Appeal heard by	Time to appeal	Notice suspended until appeal heard?
Hygiene Improvement Notices	The Food Hygiene (Wales) Regulations 2006	Magistrates' Court	1 Month or time specified in notice, whichever is shorter	Yes
Improvement Notices	The Food Safety Act 1990	Magistrates' Court or First-tier Tribunal (General Regulatory Chamber) - depending on the specific legislation which enables improvement notices to be served under section 10 of the Food Safety Act 1990.	1 Month or time specified in notice, whichever is shorter	Yes
Improvement Notices made under specific legislation	The Spirit Drinks Regulations 2008 The Scotch Whisky Regulations 2009	Magistrates' Court	28 days	No, unless Court directs otherwise
Improvement Notices	The Food Additives, Flavourings, Enzymes and Extraction Solvents (Wales) Regulations 2013	Magistrates' Court	1 Month	No, unless Officer or Court suspends it

Type of notice	Legislation	Appeal heard by	Time to appeal	Notice suspended until appeal heard?
Compliance Notices	The Quality Schemes (Agricultural Products and Foodstuffs) Regulations 2018	First-tier Tribunal (General Regulatory Chamber)	28 days	No, unless Tribunal directs otherwise
Improvement Notice	The Novel Foods (Wales) Regulations 2017	Magistrates' Court	1 Month or time specified in notice, whichever is shorter	Yes
Non-compliance Penalty Notices	The Quality Schemes (Agricultural Products and Foodstuffs) Regulations 2018	First-tier Tribunal (General Regulatory Chamber)	28 days	Yes
Enforcement Cost Recovery Notices	The Quality Schemes (Agricultural Products and Foodstuffs) Regulations 2018	First-tier Tribunal (General Regulatory Chamber)	28 days	Yes
Warning Notices	The Wine Regulations 2011	Person nominated by the FSA	28 days	No, unless person nominated decides otherwise
Enforcement Notices	The Wine Regulations 2011	Person nominated by the FSA	28 days	No, unless person nominated decides otherwise
Prohibition Notices	The Wine Regulations 2011	Person nominated by the FSA	28 days	No, unless person nominated decides otherwise

6.4.8 Other discussions with the Competent Authority

Although an FBO has a right of appeal against all notices, it is recommended that the Competent Authority be prepared to discuss the:

- notice and its requirements informally with the FBO, if they wish to do so
- requirements of any letter or other enforcement action

If an FBO raises that the requirements of a notice are inconsistent with the interpretation or practice of other Competent Authorities, it is recommended that the Competent Authority review and have regard to these views.

It is recommended that Competent Authorities have internal processes to consider requests for further discussion and make these arrangements known to FBOs.

Disputes are recommended to be referred to the lead food officer, or an appropriate senior manager nominated by the lead food officer to come to a decision.

6.4.9 Compensation

Generally, there is no provision for compensation in relation to notices issued by Competent Authorities. If a food business suffers financial loss as a result of a notice served in error, they may pursue compensation through a civil negligence claim against the Competent Authority. For example, an FBO who is unable to sell perishable food.

An example of where compensation provisions are provided include Improvement Notices issued under The Novel Foods (Wales) Regulations 2017. Competent Authorities are required to compensate a person for loss suffered where it was unreasonable for a Stop Notice to be served or for a Completion Certificate to be refused.

The recipient of the Improvement Notices may also appeal the decision to withhold compensation or the amount of compensation. This appeal is to the Magistrates' Court who may award compensation, increase, or decrease the amount of compensation or order repayment of compensation (in whole or in part) back to the Competent Authority.

6.4.10 Compliance

It is recommended that the authorised officer who served the notice:

- liaise with the FBO and monitor the work being undertaken
- encourage the FBO to notify the authorised officer when the work has been completed
- confirm in writing to the FBO that the works have been satisfactorily completed

However, another authorised officer may monitor the work if the authorised officer who served the notice is unable to do so.

6.4.11 Enforcement

Non-compliance with notices may lead to criminal proceedings being brought by Competent Authorities.

Non-compliance with the following notices are criminal offences:

- Hygiene Improvement Notices
- Improvement Notices
- Enforcement Notices
- Prohibition Notices

Non-compliance with the following notices, are not criminal offences, but a Competent Authority may take criminal proceedings for the matter specified in the notice:

- Non-compliance Penalty Notice
- Warning Notice

Before commencing criminal proceedings for these offences, the Competent Authority would consider its own enforcement policy and the Code for Crown Prosecutors.

The Quality Schemes (Agricultural Products and Foodstuffs) Regulations 2018 do not provide any criminal offences for non-compliance with a Compliance Notice served under it. However, if the notice is not complied with then a Non-Compliance Penalty Notice may be served imposing a penalty of up to £40,000 on the person that has failed to comply with the Compliance Notice. If this penalty is unpaid, it can be recovered as a civil debt or on order of the court.

Legislation may also provide criminal sanctions for breaches where a notice could be used. For example, regulation 10 of The Food Information (Wales) Regulations 2014 provides criminal offences in relation to certain allergen labelling/information requirements. Authorised officers will have the choice of taking a criminal prosecution in relation to the contravention or serving a notice, or both.

When deciding whether to issue a notice, take a criminal prosecution or doing both, considerations may include:

- the public health risk
- the evidence available
- the circumstances of the contravention
- what they believe is the most effective enforcement strategy

If a Fixed Monetary Penalty Notice or a Compliance Notice relating to novel foods is served, they prevent criminal proceedings being initiated. If the FBO subsequently fails to comply with the notice, criminal proceedings may then be initiated.

6.4.12 Publication of notices

The Spirits Drinks Regulations 2008 and The Scotch Whisky Regulations 2009 provide that where an Improvement Notice is issued under these regulations, the Competent Authority will publicise that it has been issued, in such a manner as they see fit.

The Regulations also provide that the notice is not to be publicised:

- until the appeal period has elapsed
- an appeal against the notice has been heard
- where the Competent Authority considers that it would be inappropriate to do so

If a Competent Authority decides against publishing a notice, it is recommended that they keep records of why that decision was taken.

6.4.12.1 Template notices

The Food Safety (Improvement and Prohibition - Prescribed Forms) Regulations 1991 provide prescribed forms for enforcement notices issued under the Food Safety Act 1990, for example, Improvement Notices under section 10 of the Act.

Other template [notices](#) can be found on the FSA's communications platform.

6.4.12.2 Other guidance

Further guidance on the drafting and use of Hygiene Improvement Notices has been issued by the WLGA and can be found on the [Knowledge Hub](#).

The Competent Authority may want to discuss enforcement issues on a regional level or via the Knowledge Hub with other Competent Authorities to see if there is other established practice that should be considered. An opinion may be sought from the National Food Hygiene Focus Group or the Food Standards and Information Focus Group with cases submitted via the Regional Liaison Groups

6.5 Remedial Action Notices

This section deals with the use of Remedial Action Notices (RANs) in relation to any food business establishment under Regulation 9 of the Food Hygiene (Wales) Regulations 2006.

Authorised officers should seek to remedy non-compliance in establishments by a graduated approach to enforcement. When necessary, the Hygiene Improvement Notice provisions in Regulation 6 may be considered. Authorised officers should consider these options before commencing any other enforcement action. However, RANs as provided for by Regulation 9 of these Regulations can be used, when appropriate.

If an authorised officer considers it necessary to serve a RAN owing to the conditions or practices found the authorised officer must also consider whether food at the establishment should be detained for the purposes of examination or seized. Further information relating to the seizing and detaining of food can be found below.

6.5.1 When to use a Remedial Action Notice

Regulation 9 of the Food Hygiene (Wales) Regulations 2006 provides for authorised officers to serve a Remedial Action Notice where it appears to them that the requirements of the "Hygiene Regulations", as defined by Regulation 2 of the 2006 Regulations, are being breached or an inspection under the "Hygiene Regulations" is being hampered. More specifically, this provision provides, through the service of a RAN:

- for the prohibition of the use of any equipment or any part of the establishment
- the imposition of conditions upon, or prohibiting, any process

- allows for the rate of an operation to be reduced or stopped completely

Circumstances which may lead to the issue of a RAN in respect of an establishment include:

- the failure of any equipment or part of an establishment to comply with the requirements of the “Hygiene Regulations” as defined by Regulation 2 of the Food Hygiene (Wales) Regulations 2006
- the need to impose conditions upon or the prohibition of the carrying on of any process breaching the requirements of the Regulations or hampering adequate health inspection in accordance with the Regulations
- where the rate of operation of the business is detrimental to its ability to comply with the Regulations

Such action must be proportionate to the risk to public health and where immediate action is required to ensure food safety. A RAN can be used if a continuing offence requires urgent action owing to a risk to food safety.

6.5.2 When not to use a Remedial Action Notice

Remedial Action Notices may not be appropriate in the following circumstances where:

- In the case of maintenance/structural problems that can be rectified as a non-urgent matter where informal action or a Hygiene Improvement Notice would be more appropriate
- The operation of an entire establishment needs to be prohibited and the most appropriate course of action is the service of a Hygiene Emergency Prohibition Notice
- Suspension of an approval on an establishment approved under Regulation (EC) No 853/2004 is required

6.5.3 Drafting of Remedial Action Notices

A remedial action notice should be served as soon as practicable and state why it is being served i.e. the requirements of the Hygiene Regulations are not being met and/or that an inspection under the Hygiene Regulations is being hampered.

It must be clear and easy to understand from the notice:

- the grounds for serving the notice
- the measures (or equivalent measures) the recipient is required to take
- the actions required to remedy the situation

If the RAN is served under Regulation 9(1)(a) of the Food Hygiene (Wales) Regulations 2006, such as when requirements of the Hygiene Regulations are being breached, the notice must also specify the breach

6.5.4 Withdrawal of Remedial Action Notice

As soon as the authorised officer who served the RAN is satisfied that the action specified in a RAN has been taken, the notice must be withdrawn by means of a further notice in writing.

6.5.5 Appeals

Regulation 20(1)(c) of the Food Hygiene (Wales) Regulations 2006 allows any person who is aggrieved by an authorised officer's decision to serve a RAN can appeal to the Magistrates' Court. The time limit for such an appeal is 1 month from when the authorised officer served the notice. The notice remains in force until the appeal decision is determined. The court may cancel or affirm the notice. If affirmed it, may do so either in its original form or with modifications.

6.5.6 Template Forms

The following templates can be found on FSA's communication platform:

- Remedial Action Notices
- Notice of Withdrawal of a Remedial Action Notice

6.6 Prohibition procedures

6.6.1 Introduction

This section provides information regarding the use of:

- hygiene emergency prohibition procedures and Hygiene Prohibition Orders (HPOs), under regulations 7 and 8 of The Food Hygiene (Wales) Regulations 2006
- emergency prohibition procedures and Prohibition Orders (POs) under sections 11 and 12 of the Food Safety Act 1990

6.6.2 Hygiene prohibition procedures and prohibition procedures

HPO¹³ and POs¹⁴ are made by a Magistrates' Court following the conviction of an FBO for an offence, to prohibit the use of:

- a process or treatment for the purposes of the business
- the premises or equipment for the purposes of the food business or any similar food business
- the premises or equipment for the purposes of any food business

The authorised officer may bring to the attention of the Court regulation 7 of The Food Hygiene (Wales) Regulations 2006 or section 11 of the Act so that an HPO/PO against a FBO may be considered.

¹³ Regulation 7 of The Food Hygiene (Wales) Regulations 2006

¹⁴ Section 11 of the Food Safety Act 1990

The Court will make an order if it is satisfied that the premises, equipment, treatment and/or process fulfil the health risk condition.

The Court may also make an order prohibiting an FBO from managing any food business, or a particular type of food business provided the FBO has been convicted of an offence and the Court thinks it appropriate in the circumstances of the case.

The sentencing guidelines covering food safety and hygiene offences includes considering this prohibition as part of the sentencing process. Further information can be found on the [Sentencing Council website](#).

6.6.3 Hygiene emergency prohibition procedures and Emergency prohibition procedures

If the health risk condition is fulfilled in respect of a food business and there is an imminent risk of injury to health, an authorised officer may serve an HEPN¹⁵ or EPN¹⁶ on the FBO. Depending on the circumstances, the use of voluntary procedures may be more appropriate.

If the appropriate evidence is found, an HEPN/EPN may be served on the FBO, followed by an application to a Magistrates' Court for a Hygiene Emergency Prohibition Order (HEPO)/Emergency Prohibition Order (EPO).

The effect of the notice is the immediate closure of the premises, or to prevent the use of equipment, a process, or a treatment.

The HEPN/EPN legislation requires the authorised officer to apply to a Magistrates' Court for an HEPO/EPO within three days of an HEPN/EPN being served, the day of service of the notice being day one, or the HEPN/EPN ceases to have effect.

The HEPN/EPN legislation also requires the authorised officer to serve notice on the FBO at least one day (24 hours) before the day the authorised officer intends to make the application to Court.

There is no legal requirement for the application to be heard within the three days, but it is recommended that the Court be asked to list the application for hearing at the earliest opportunity. Compensation may be payable to the FBO for loss of business if the Court refuses to grant the order.

The burden of proof falls to the Competent Authority that made the application. An authorised officer would, using their professional judgement, decide whether a premises, process, treatment, a piece of equipment or its use involves an imminent risk of injury to health.

Once made, an HEPO/EPO supersedes an HEPN/EPN.

¹⁵ Regulation 8 of The Food Safety and Hygiene (Wales) Regulations 2006

¹⁶ Section 12 of the Food Safety Act 1990

6.6.4 Health Risk Condition/Imminent Risk of Injury to Health

Prohibition and emergency prohibition procedures under The Food Hygiene (Wales) Regulations 2006 and the Food Safety Act 1990 can only be used if the 'health risk condition' is fulfilled.

For prohibition procedures to be invoked, there needs to be a risk of injury to health, while in respect of emergency prohibition procedures there needs to be an imminent risk of injury to health.

In relation to an 'imminent risk of injury to health', the injury itself may occur sometime in the future, but it is essential to show that it could occur for the action to succeed. Not everyone exposed to the risk of injury would need to suffer the injury for it to be an imminent risk. It is the exposure to the risk of injury that enables action to be taken.

6.6.4.1 Health Risk Condition – HEPN/HEPO

In relation to food hygiene, the 'health risk condition' under The Food Hygiene (Wales) Regulations 2006 may exist if, for example:

- conditions in premises, or a defective process or treatment, carry a high risk of causing food borne infection
- the premises are in very poor structural condition
- poor equipment and/or poor maintenance or routine cleaning and/or serious accumulations of refuse, filth, or other extraneous matter, resulted in contamination of food or a significant risk of food contamination

Foods containing potentially harmful levels of pathogenic micro-organisms represent an imminent risk and may be seized or detained under regulation 23 of The Food Hygiene (Wales) Regulations 2006. This would be done by using the powers in section 9 of the Food Safety Act 1990 (see also regulation 9 of The Food Hygiene (Wales) Regulations 2006 in this regard).

The process or treatment which exposed the food to this microbiological contamination would be dealt with under regulation 8 of The Food Hygiene (Wales) Regulations 2006, where appropriate.

6.6.4.2 Health Risk Condition – EPN/EPO

The 'health risk condition' applies specifically in the context of seeking either a PO under section 11 of the Food Safety Act 1990 or an EPN/EPO for the purposes of section 12 of the Act.

The following are examples of circumstances that could involve an imminent risk of injury to health where an authorised officer may consider the use of prohibition powers:

- a process or treatment that introduces a teratogenic chemical (one that damages a developing foetus in the womb) into food, which might cause injury to the developing foetus, but the damage will not be apparent until the baby is born
- a process or treatment that introduces a genotoxic chemical (one that damages genes or chromosomes) into food, the effects of which might not manifest

themselves until an affected child, as yet unborn, of a mother who has consumed the food, develops a malignant tumour sometime in the future

Foods containing potentially damaging levels of such chemicals represent an imminent risk and may be seized or detained under section 9 of the Food Safety Act 1990. The process or treatment which exposed the food to this chemical contamination would be dealt with under section 12 of the Food Safety Act 1990, where appropriate.

6.6.5 Criteria for action - hygiene prohibition procedures/prohibition procedures

The following sections provide examples of circumstances that may show that the health risk condition exists as defined by regulation 7(2) of The Food Hygiene (Wales) Regulations 2006 or section 11(2) of the Food Safety Act 1990, i.e. there is an imminent risk of injury to health, and where an authorised officer may consider the use of prohibition powers. POs can only be made by the Courts.

6.6.5.1 Prohibition on use of premises

Health risk conditions where prohibition on use of premises may be appropriate include:

- infestation by rats, mice, cockroaches, birds, or other vermin, serious enough to result in the contamination of food or a significant risk of contamination
- very poor structural condition and poor equipment and/or poor maintenance, or routine cleaning and/or serious accumulations of refuse, filth, or other extraneous matter, resulting in the actual contamination of food or a significant risk of contamination
- drainage defects or flooding of the establishment, serious enough to result in the contamination of food, or a significant risk of food contamination
- premises or practices which seriously contravene food law and have been, or are implicated, in an outbreak of food poisoning.
- any combination of the above, or the cumulative effect of contraventions which, taken together, represent the fulfilment of the health risk condition

6.6.5.2 Prohibition on use of equipment

Health risk conditions where the prohibition on use of equipment may be appropriate include:

- use of equipment for the processing of high-risk foods that has been inadequately cleaned or disinfected or which is grossly contaminated and can no longer be properly cleaned
- dual use of complex equipment, such as vacuum packers for raw and ready-to-eat foods. However, dual use of less complex equipment such as weighing scales may be appropriate subject to the business being able to demonstrate that such equipment will be effectively cleaned and disinfected between use for raw and ready-to-eat foods
- use of storage facilities or transport vehicles for primary produce where the storage facilities or transport vehicles have been inadequately cleaned or disinfected

6.6.5.3 Prohibition on use of a process

Health risk conditions where prohibition on use of a process may be appropriate include:

- serious risk of cross contamination
- failure to achieve sufficiently high processing temperatures
- operation outside critical control criteria, for example, incorrect pH of a product which may allow Clostridium botulinum to multiply
- the use of a process for a product for which it is inappropriate

6.6.6 Seeking additional advice

Authorised officers may look to seek expert medical or other professional advice if a process or treatment is producing food that appears to contain chemicals or other substances that might pose an imminent risk of injury to health, or where the process or treatment in question itself requires other specialist knowledge or expertise. The IFST maintains a [Consultant Directory](#) of experts in particular fields.

An authorised officer exercising a right of entry under regulation 14 of The Food Hygiene (Wales) Regulations 2006 or section 32 of the Food Safety Act 1990 can be accompanied by any other necessary persons, including experts.

If serving an HEPN/EPN, it is the authorised officer who needs to be satisfied that the health risk condition is fulfilled with respect to the food business.

6.6.7 Deferring immediate action

There may be circumstances where immediate closure is not necessary, even though there might be an imminent risk to health. For example, the condition of a retail food premises that might pose an imminent risk but would not necessarily warrant immediate closure if the condition was only discovered at the end of trading hours.

In such a case, the authorised officer may decide not to impose an emergency prohibition if the FBO undertook the necessary measures to clean the premises overnight.

The risk in such circumstances might be minimal, as the premises would not be open to the public. The authorised officer would be free to decide on the following morning whether the imminent risk still required action.

6.6.8 Prohibition of a person

When an FBO has been convicted of a relevant offence, the authorised officer may feel that it is appropriate to ask the Court to consider making a PO against the FBO, which prohibits the person from running a food business.

Such action may be appropriate for repeated offences such as failure to clean, failure to maintain equipment, blatant disregard for health risks, or putting health at risk by knowingly using unsafe food.

6.6.9 Court proceedings relating to prohibition procedures

6.6.9.1 Evidence required

The authorised officer will need to collect sufficient evidence to substantiate any proceedings in Court.

It is important that contemporaneous notes, including sketches and photographs, are taken during an official control as they may be used in evidence in Court. Samples of insects, dirt or other contaminants may also be useful.

An authorised officer's notes made during or at the end of a visit to an establishment need to be accurate and factual, so that they may rely on them in Court.

Although authorised officers do not need to be accompanied by a witness, such as another officer, there may be occasions when visual reports from a third party are of particular relevance.

6.6.9.2 Application to the Court

It is recommended that the Competent Authority discuss formal action with its litigation solicitor and with the Legal Adviser of the local Magistrates' Court. It is also recommended that the Competent Authority clarify details of the local Court practice to try and resolve potential difficulties of obtaining Court time at short notice. This can be initiated by contact with the Magistrates' Clerk's Office to ensure that applications for EPOs and HEPOs are expedited.

As required by the HEPN/EPN legislation, the FBO is notified if an authorised officer intends to apply for an HEPO or EPO. A notice of application for the order needs to be served on the FBO, at the latest, on the day before the date of the application, giving details of the Court appearance.

6.6.9.3 Action to be taken prior to the hearing

It is recommended that the authorised officer organises monitoring of the premises between the service of the notice and the Court hearing. The authorised officer who served the notice need not necessarily carry out the monitoring, but it is recommended that they fully brief the relevant colleague of the risks and evidence gathered.

It is recommended that the premises be re-inspected shortly before the hearing (preferably the day before or on the day of the hearing itself) by the authorised officer who served the notice. If this is not possible, an authorised officer with relevant experience may carry out the re-inspection. The same is true if any contravention was found during the monitoring.

The purpose of the re-inspection is to gather evidence as to the current condition of the premises or equipment for the Court hearing. It is recommended that the authorised officer notes any changes that have taken place since the notice was served. For example, the circumstances which led to the service of the notice might have worsened, or other new circumstances may now also pose a risk to health.

If an HPO or PO¹⁷ against an FBO is to be considered, it is important that suitable evidence is gathered to produce to the Court.

It is important that authorised officers brief their legal advisers fully on the public health aspect of the case in hand. This may include the public health basis for the legal requirements which have been breached. This allows them to advise the Court on the seriousness of the charges.

6.6.9.4 Information to be given to the Court

Information that the Court may require includes:

- the state of the premises or equipment, both at the time of the offence and at the time the premises were re-inspected prior to the hearing
- any evidence that the FBO had been involved in offences elsewhere, which tended to show weaknesses in management

It is usual for those prosecuting to ascertain if there have been any previous convictions or cautions. If so, those prosecuting would obtain details for presentation to the Court in the event of the prosecution being successful. The details may also be used in evidence if the requirements of section 101 of the Criminal Justice Act 2003 concerning the defendant's bad character are met.

6.6.10 Service of prohibition notices and orders

6.6.10.1 Methods of serving the notice or order

It is recommended that every effort be made to serve Prohibition Notices and Orders made under The Food Hygiene (Wales) Regulations 2006 and the Food Safety Act 1990 by delivering them by hand to the FBO, or to each of the operators/proprietors in the case of a partnership.

These notices and orders do not need to be served by the authorised officer who initiated the action. However, it is recommended that they be served by an authorised officer who is competent to explain the purpose of the order or notice, such as the necessary steps to be taken by the FBO and be able to deal with obstruction.

If a notice or order cannot be handed to the FBO in person, a copy of the document may be handed to whoever is responsible for complying with immediate closure or prohibition action, for example, the manager.

The FBO needs to be aware of the reasons for the imminent risk. Although this is included in the [model HEPN](#) and the prescribed EPN¹⁸, the FBO may not understand what steps need to be taken to remove the imminent risk and so further explanation from the authorised officer may be necessary.

¹⁷ Regulation 7 of The Food Hygiene (Wales) Regulations 2006 or section 11 of the Food Safety Act 1990

¹⁸ Food Safety (Improvement and Prohibition-Prescribed Forms) Regulations 1991

If the operator/proprietor is present in Court, the authorised officer can consult with the Justices' Legal Adviser to check if it is possible to serve an order before the operator/proprietor leaves the Court.

The service of the notice or order on a number of partners can sometimes present difficulties, particularly when a partner is not in the UK at the time. As soon as the notice or order is properly served on any one of the partners it takes effect.

If it is not possible to serve the document by hand, then the authorised officer will need to serve the document by post. It is recommended to attain proof of posting and, where able, proof of delivery. It is useful to record the time of service, even when the postal service is used.

The document can be sent electronically to the operator/proprietor for information in advance of its formal service. However, a hard copy also needs to be provided for it to be considered served.

Immediately after the document has been legally served¹⁹, the prohibition becomes effective. This can relate to the use of the premises or equipment for the purposes of any food business, or a particular type of food business, or to a process or treatment. Following the service of an HPO or PO, the HEPN or EPN ceases to have effect.

6.6.10.2 Affixing the notice or order on the premises

After the making of an order or the serving of a notice, a copy of the order or notice needs to be clearly displayed on the premises. This applies under regulations 7 and 8 of The Food Hygiene (Wales) Regulations 2006 and sections 11 and 12 of the Food Safety Act 1990.

The purpose of this is to inform the public and anyone that uses the premises that they have been closed. This may also relate to a process or piece of equipment prohibited from being used.

It is recommended that an authorised officer who is competent to explain the meaning and importance of the notice take this action. A witness need only accompany the authorised officer if required by the Competent Authority. The authorised officer who initiated the action does not need to be involved.

The authorised officer needs to affix a copy of the document to a conspicuous position on the premises²⁰. It is recommended, where possible, this be inside the premises, in a position where it can clearly be seen and read from the outside, preferably on the inside of a front facing window.

¹⁹ Regulation 28 of The Food Hygiene (Wales) Regulations 2006 or section 50 of the Food Safety Act 1990

²⁰ Regulations 7 and 8 of The Food Hygiene (Wales) Regulations 2006 and sections 11 and 12 of the Food Safety Act 1990

If this is not possible, the authorised officer needs to use professional judgement as to the best placement. If needed, a second copy of the document can be placed outside of the premises ensuring that it is protected from the weather and vandalism.

6.6.11 Unauthorised removal or defacement of notices or orders

The Food Hygiene (Wales) Regulations 2006 nor the Food Safety Act 1990 make any reference to defacing or removing an HPO, a HEPN, an HEPO, an PO, an EPN, or an EPO. Such action could be considered as obstruction under regulation 15 of The Food Hygiene (Wales) Regulations 2006, as removing or defacing a notice or order can be considered an act that 'intentionally obstructs any person acting in the execution of the Hygiene Regulations'. Similarly, section 33 of the Food Safety Act 1990 makes it an offence to intentionally obstruct any person acting in the execution of this Act.

6.6.12 Breach of a prohibition notice or order

Where a notice or order is breached, the following offences may apply:

- a person who knowingly contravenes an HPO or a PO is guilty of an offence under regulation 7(5) of The Food Hygiene (Wales) Regulations 2006 or section 11(5) of the Food Safety Act 1990, respectively
- a person who knowingly contravenes a HEPN or HEPO or an EPN or EPO is guilty of an offence under regulation 8(5) or (6) of The Food Hygiene (Wales) Regulations 2006 or section 12(5) or (6) of the Food Safety Act 1990, respectively

Where offences are identified, having regard to the Competent Authorities enforcement policy, these may be referred for prosecution.

An authorised officer can commence proceedings for the offence under the appropriate legislation by submitting a draft summons to the Magistrates' Court which is subsequently served on the defendant requiring them to attend a first hearing to enter a plea.

If the authorised officer believes that there is sufficient evidence to show that the proprietor/FBO is unlikely to respond to a summons, an application could be made for a warrant rather than a summons. The Court will decide if the circumstances justify this action and can ask the authorised officer for their view as to whether to endorse the warrant with bail. The authorised officer will need to use their professional judgement and consider all relevant circumstances in their decision.

It is recommended that the Competent Authority make contingency arrangements with its legal department, so that in the event of the breach of a notice or order, there is no delay in making an application before the Court. It is recommended that Competent Authorities refer to their enforcement policy when deciding what action to take regarding the breach of notice or order.

6.6.13 Lifting a notice or order

6.6.13.1 Lifting prohibition notices and orders

An HPO, HEPN or HEPO, a PO, or an EPN or EPO ceases to have effect once a Competent Authority is of the opinion the health risk condition has been removed and has issued a certificate²¹.

The FBO needs to apply in writing to the Competent Authority for a certificate lifting an HPO, HEPN or HEPO, a PO or an EPN or EPO. It is recommended that on receiving such a request, the authorised officer re-inspect the premises and determine whether the notice or order can be lifted. The legislation requires this determination to be done as soon as possible or within 14 days of the request²². If the Competent Authority is of the opinion that the health risk condition has been removed, they issue the certificate within three days.

It is recommended that the decision on whether to issue the certificate or not be made by the authorised officer who initiated the action. If they are not available, the decision can be made by another authorised officer with the relevant competency.

The certificate can be sent electronically or communicated verbally, thus allowing the premises to re-open immediately. Model certificates can be found in the Food Safety (Improvement and Prohibition-Prescribed Forms) Regulations 1991 or the FSA's [communication platform](#).

If the authorised officer is of the opinion that the health risk condition has not been removed, arrangements are made for the Competent Authority to issue a notice²³ of continuing risk to health within three days. The Competent Authority is required to give reasons why it is not satisfied that the health risk condition has been removed. Model notices can be found in the Food Safety (Improvement and Prohibition-Prescribed Forms) Regulations 1991 or the FSA's [communication platform](#).

If an authorised officer conducts a further official control before the Court hearing and they are satisfied that the health risk condition no longer exists, the authorised officer may still wish to continue with the application to request the HEPO/EPO. The reason for this is that the hearing to request the HEPO/EPO may reduce the likelihood of a claim for compensation by the FBO.

A certificate lifting an HEPN or EPN can be issued before the application for a HEPO or EPO can be heard, but the operator/proprietor can still be prosecuted for the offence(s)

²¹ Regulation 7(6) or 8(8) of The Food Hygiene (Wales) Regulations 2006, or section 11(6) or 12(8) of the Food Safety Act 1990, as appropriate

²² Regulation 7(7) or 8(9) of The Food Hygiene (Wales) Regulations 2006, or section 11(7) or 12(9) of the Food Safety Act 1990, as appropriate

²³ Regulation 7(7) (b) or 8(9) (b) of The Food Hygiene (Wales) Regulations 2006, or section 11(7) (b) or 12(9) (b) of the Food Safety Act 1990, as appropriate

against The Food Hygiene (Wales) Regulations 2006 or the Food Safety Act 1990, as appropriate.

It is recommended that the Competent Authority ensures that the Court is informed in this situation.

6.6.13.2 Lifting of prohibition orders against persons

HPO or PO²⁴ against persons imposed by a Court can only cease to have effect if, on an application by the FBO or food business proprietor, the Court gives such a direction. No application will be entertained within six months of the date of the order being made.

6.6.13.3 Appeals – refusal to lift prohibition order

Regulation 20(1) of The Food Hygiene (Wales) Regulations 2006 and section 37 of the Food Safety Act 1990 allow any person to appeal a Competent Authorities decision to refuse to issue a certificate or lift a prohibition notice or order by way of a complaint to the Magistrates' Court. The time limit for such an appeal is one month from the date when the Competent Authority served the notice of their refusal to lift the prohibition.

The recipient of a notice of continuing risk to health needs to clearly understand their right of appeal. To support this, it is recommended that the notice either includes, or is accompanied by, details of the right of appeal and the name and address of the relevant Magistrates' Court.

6.6.14 Compensation

The Competent Authority would need to compensate the FBO in respect of 'any loss' which is directly attributable to the wrongful service of the notice²⁵. Any disputed question as to the right to or the amount of any compensation payable is to be determined by arbitration.

The Competent Authority can assess the amount of compensation due by considering the following aspects, where applicable:

- the length of time the process or treatment was halted, or the use of premises or equipment was prohibited and for what purpose
- loss of trade
- value of spoilt food
- loss of goodwill
- loss of wages
- how much of the damage to trade is reparable
- obligation of the operator/proprietor to mitigate their own loss

²⁴ Regulation 7(6)(b) and 7(8) of The Food Hygiene (Wales) Regulations 2006 or section 11(6)(b) and 11(8) of the Food Safety Act 1990

²⁵ Regulation 8(10) of The Food Hygiene (Wales) Regulations 2006 and section 12(10) of the Food Safety Act 1990

Alternatively, if the operator/proprietor of the business is agreeable, a loss adjuster may be used.

6.7 Detention and seizure

6.7.1 Introduction

This section provides information regarding the use of the detention/inspection and seizure powers under regulation 27 of The Food Hygiene (Wales) Regulations 2006 and/or section 9 of the Food Safety Act 1990.

Information regarding Detention Notices which apply to approved premises can be found in section 6.11.4.

6.7.2 Food which fails to comply with food safety requirements

Section 8 of the Food Safety Act 1990 provides that food which is unsafe within the meaning of article 14 of Regulation (EC) No 178/2002, fails to comply with food safety requirements.

If food does not satisfy food safety requirements for reasons other than hygiene, section 9 of the Food Safety Act 1990 is to be used.

Section 9 of the Act permits the service of a Detention of Food Notice to prevent the use of the food for human consumption. Competent Authorities need to use the forms set out in the Detention of Food (Prescribed Forms) Regulations 1990 when using powers under section 9 of the Act.

6.7.2.1 Food hygiene

When food has not been produced, processed or distributed in compliance with the 'hygiene regulations'²⁶ an authorised officer may use regulation 27 of The Food Hygiene (Wales) Regulations 2006 to seize the food under section 9 of the Food Safety Act 1990.

Following the certification required by regulation 27, the food is treated, for the purposes of section 9 of the Food Safety Act 1990, as failing to comply with food safety requirements.

A model certificate for this purpose can be found on the FSA's [communications platform](#).

6.7.2.2 Food standards

The following legislation gives specific powers of seizure and detention to Competent Authorities carrying out food standards controls:

- The Contaminants in Food (Wales) Regulations 2013
- The Eggs and Chicks Regulations (Wales) 2010
- The Food Irradiation (Wales) Regulations 2009
- The Genetically Modified Food (Wales) Regulations 2022

²⁶ Regulation 2 of The Food Hygiene (Wales) Regulations 2006

- The Tryptophan in Food (Wales) Regulations 2005
- The Scotch Whisky Regulations 2009
- The Spirit Drinks Regulations 2008
- The Food Additives, Flavourings, Enzymes and Extraction Solvents (Wales) Regulations 2013
- The Novel Foods (Wales) Regulations 2017

6.7.2.3 Presumption it is food

It is presumed under food law that all food is intended for human consumption until it is proved to the contrary.

Detention powers would not be used in relation to food that has already been clearly identified by a food business as not being intended for human consumption.

An authorised officer may assist or advise the person in charge of the food as appropriate. If there is any doubt about the food being used for human consumption, it is presumed that it is. If an FBO wished to argue for a contrary intention, then it is for the FBO to prove this.

6.7.3 Dealing with batches, lots, or consignments of food

Article 14(6) of Regulation (EC) No 178/2002 stipulates that where, 'any food which is unsafe is part of a batch, lot, or consignment of food of the same class or description, it shall be presumed that all the food in that batch, lot or consignment is also unsafe, unless following a detailed assessment there is no evidence that the rest of the batch, lot or consignment is unsafe'.

It is recommended that if a quantity of food of different types or batches is being detained, the authorised officer issue a separate Detention of Food Notice in respect of each type or batch.

When considering whether to seize or detain/inspect a batch, lot or consignment, the authorised officer may take account of the:

- evidence available
- nature of the contamination
- nature and condition of any container holding the food
- risk to health
- quantity of food involved in relation to any sampling which has been undertaken

The authorised officer will need to use professional judgement to decide whether to detain or seize the whole of the batch, lot, or consignment. Appropriate expert advice may be sought if necessary.

If a whole batch, lot or consignment is detained and it subsequently becomes clear that only part of the detained food is affected and needs to be seized, the remainder of the batch, lot or consignment may be released. The compensation provisions under section 9(7) of the Food Safety Act 1990, may need to be considered if this course of action is taken.

6.7.4 Taking action without inspecting

The provisions of section 9 of the Food Safety Act 1990 also apply to food that has not been inspected.

This could apply when the authorised officer has reasonable grounds to suspect that consumption of the food would be likely to cause foodborne or other communicable disease, or that it was otherwise so contaminated that it would not be reasonable for it to be consumed in that condition.

Information from another reliable source, for example, another Competent Authority, the PHW, the CCDC, or the FSA, can be sufficient to enable an authorised officer to act without inspecting.

An inspection of the food is not legally necessary in such situations, it might nonetheless be prudent, if only for identification purposes.

6.7.5 Detention of food

Unless the circumstances require immediate action, it is recommended that a decision to detain food only normally be taken if it has been discussed with the owner or person in charge of the food and, if appropriate, with the manufacturer.

Authorised officers need to exercise careful judgement, and might need to seek expert advice, before using their powers to detain food pending further investigation.

Food that is suspected of causing food poisoning can often be readily identified, and the decision to detain can therefore be taken relatively easily.

6.7.5.1 Location of detention

Where the authorised officer has served a Detention of Food Notice, professional judgement will need to be used to determine whether the food is detained where it is or moved elsewhere.

If the authorised officer has any doubts about the security or physical care of the food, the Detention of Food Notice needs to specify a place to which the food is to be moved²⁷.

If food is to be removed to another Competent Authority's area, it is recommended that the authorised officer notify that Competent Authority and make any necessary arrangements for the food to be checked while it is being detained.

In all cases, but especially with highly perishable food, the authorised officer needs to act quickly at every stage and provide full information to those required to carry out analysis or examination of samples of the food.

Food that requires special storage conditions, such as refrigeration, might need to be moved elsewhere, in which case the decision to require the food to be moved would be discussed with the owner of the food.

²⁷ Detention of Food (Prescribed Forms) Regulations 1990

If food is to be detained where it is found, the authorised officer needs to be satisfied that adequate arrangements can be made to ensure its security. It is recommended that the authorised officer organise periodic monitoring of the food throughout the period of detention.

Before making such arrangements, regard would be given to the nature of the food, the quantity, any health hazard that it represents, and the ownership of the establishment where it is located. It is recommended that the authorised officer avoid leaving it in the charge of, or in an establishment owned by, any person who may be prosecuted for an offence under food law.

The decision to detain a whole batch, lot, or consignment needs careful consideration before a notice is served.

6.7.5.2 Detention of food notice

A Detention of Food Notice is required to be signed by the authorised officer who takes the decision to detain the food. Competent Authorities need to use the Detention of Food Notice set out in the Detention of Food (Prescribed Forms) Regulations 1990.

6.7.5.3 Withdrawal of detention of food notice

It is recommended that the authorised officer act as quickly as possible when evidence or information indicates that detained food can be released. A Withdrawal of Detention of Food Notice needs to be served as soon as reasonably practicable or within 21 days of the detention²⁸.

It is recommended that the decision to issue a Withdrawal of Detention of Food Notice is taken either by the authorised officer who originally issued the notice or initiated the action, or by another authorised officer with the relevant competence.

Serving a Withdrawal of Detention of Food Notice as soon as possible will prevent deterioration of the food and minimise the Competent Authority's exposure to compensation under section 9(7) of the Food Safety Act 1990. The notice need not be served by the authorised officer who made the decision but can be served by any authorised officer.

Competent Authorities need to use the Withdrawal of Detention Notice set out in the Detention of Food (Prescribed Forms) Regulations 1990.

6.7.6 Seizure of food

6.7.6.1 Arrangements for treatment or processing

When considering whether to seize food, authorised officers may consider whether the food in question can be treated or processed before consumption, and if so, whether the food, after treatment or processing, would satisfy food safety requirements. The mixing of

²⁸ Section 9(4) of The Food Safety Act 1990

food to reduce high levels of contaminants is not permitted by article 3 of Commission Regulation (EC) No1881/2006.

Arrangements for the treatment or processing of food in these circumstances need to be:

- agreed by the authorised officer, and the owner or the person in control of the food
- subject to a written and signed undertaking

Any arrangement that involves food being moved to the area of another Competent Authority for treatment or processing are to be accepted by the receiving Competent Authority before the agreement is concluded.

It is recommended that arrangements be made for that Competent Authority to take steps to ensure the processing or treatment is carried out, including the service of a Detention of Food Notice, if appropriate.

If the receiving Competent Authority is unable to accept responsibility for ensuring that the food is properly processed or treated, the arrangement would not proceed, unless there is no other way of rectifying the problem with the food product.

6.7.6.2 Seizure of food - Process

Unless the preceding paragraphs of this section apply, or the use of voluntary procedures is more appropriate, food needs to be seized if an authorised officer has evidence that it does not satisfy food safety requirements.

If evidence indicates that detained food requires seizing, the authorised officer is required to serve a Food Condemnation Warning Notice, warning of the intention to take the food before a Justice of the Peace and apply for its condemnation.

Food that has been seized is required to be dealt with by a Justice of the Peace²⁹ as soon as practicable and is recommended to take place within two days. If necessary, this timescale can be longer to ensure that parties can attend and be represented if they choose to do so. Highly perishable food needs to be dealt with by a Justice of the Peace at the earliest opportunity.

The person in charge of the food or the owner needs to be given the opportunity to be present and represented if they choose to do so when the food is dealt with by the Justice of the Peace. It is recommended that action is not delayed if the owner cannot be traced or contacted. The Food Safety Act 1990 requires that anyone who may be liable to prosecution is entitled to attend the hearing. It is recommended that service of notice of the hearing be documented and retained to show the Court.

The authorised officer needs to ensure continuity of evidence. This needs to be done regardless of whether or not there may be a subsequent prosecution. The food is not to be left unsecured once it has been seized, as the authorised officer might be required to prove that the food produced before the Justice of the Peace is the food that was seized.

²⁹ Section 9(3)(b) of The Food Safety Act 1990

The food may only be left if the authorised officer is confident that it will not be moved, used for human consumption, or the evidence destroyed.

The fact that food had been condemned by a Justice of the Peace would be persuasive in any prosecution. However, this alone would not necessarily establish an offence. It is still necessary for a case to be proved beyond reasonable doubt. In this respect, certificates of analysis or examination may be of value.

6.7.6.3 Food condemnation warning

The person in charge of the food needs to be given a Food Condemnation Warning Notice once the decision to seize food has been taken. This notification gives details of the time and place of the appearance before a Justice of the Peace. This notification is purely administrative and can therefore be signed by any authorised officer.

The authorised officer delivering the notification does not need to hold the same qualifications as the authorised officer who took the decision to detain or seize the food. However, the authorised officer needs to be sufficiently competent to explain the purpose of the notification and to deal with any obstruction.

Notification to the person in charge of the food, such as the owner of the food, can be by personal delivery, fax, telephone, e-mail, or other rapid means of communication.

This is especially important in cases of seizure because of the right conferred by section 9(5) of the Food Safety Act 1990. This gives any person who might be liable to prosecution for selling or producing unsafe food the right to attend before a Justice of the Peace, to be heard and to call witnesses.

It is recommended that when food is seized, written notification of the seizure be issued as soon as possible and include details of the type and quantity of the food seized, including any distinguishing marks, codes or dates.

When the authorised officer intends to have the food dealt with by a Justice of the Peace, a Food Condemnation Warning Notice is required to be given to the person in charge of the food. It is recommended that the notification, where possible, also be given to the owner of the food if different from the person in charge.

Competent Authorities need to use the Food Condemnation Warning Notice set out in the Detention of Food (Prescribed Forms) Regulations 1990.

6.7.7 Destruction or disposal of food

The Competent Authority is responsible for ensuring the destruction or appropriate disposal of food that has been condemned under section 9(6) of the Food Safety Act 1990 or voluntarily surrendered.

It is recommended that Competent Authorities ensure arrangements are made for the food to be supervised until it can be dealt with in the appropriate manner. If there is likely to be some delay before destruction or disposal, the food could be disfigured to prevent any possibility of it being returned to the food chain.

In the case of destruction of food, the Competent Authority needs to have regard to the requirements of relevant waste disposal legislation. If total destruction is not possible, Competent Authorities need to ensure the food is disfigured to a level that the food could never re-enter the food chain, for example, by flattening tin cans for disposal in a suitably licensed landfill site.

It is recommended that a copy of the waste transfer note is obtained and kept on file for any food that has been disposed of by a licensed waste disposal contractor under these arrangements.

6.8 Voluntary procedures

6.8.1 General requirements

Voluntary procedures may be used as an alternative to formal action and can be suggested by either an authorised officer or an FBO.

It is recommended that where voluntary procedures are used, Competent Authorities ensure:

- they consider the risks of the business not complying with the voluntary agreement, as there is no legal sanction against an FBO for not adhering to it, although formal enforcement action for these non-compliance(s) may remain available
- the circumstances would have permitted the authorised officer to take formal enforcement action if the voluntary arrangement was not agreed to
- the FBO agrees that there is a non-compliance
- the voluntary agreement is put in writing and signed by both the authorised officer and FBO
- the document clearly indicates that it is a voluntary agreement, ensuring a FBO is not misled into believing it is a formal notice
- the voluntary agreement sets out the non-compliance, including legislative references
- the voluntary agreement clearly states what the FBO is agreeing to (for example, prohibiting the use of a premises)
- the voluntary agreement makes clear there is no formal appeal nor right to compensation
- the FBO is advised to take legal advice prior to signing
- if the FBO is not present, any manager agreeing to the voluntary arrangements has the authority of the FBO to agree to such action

6.8.2 Voluntary prohibitions

Voluntary prohibitions are an undertaking by the FBO not to use the premises, equipment, process, or treatment set out in the voluntary agreement, as appropriate, to remove a health risk condition.

Voluntary prohibitions can be used when:

- an FBO agrees that a health risk condition exists (for example, there is an imminent risk of injury to health)
- the authorised officer would have been able to use an HEPN or EPN

When issuing a voluntary prohibition, the authorised officer needs to consider whether there is a risk of the continued use of the premises, equipment, process, or treatment, without the authorised officer's knowledge and/or agreement. If continued operation were to cause a food incident, the Competent Authority could be criticised for not having used statutory powers.

Where a voluntary prohibition is agreed to by the FBO, it is recommended that the written documentation include an undertaking by the FBO not to re-open or use the equipment, process or treatment without the authorised officer's prior approval.

It is recommended that the authorised officer ensures frequent checks are made on the establishment to ensure that they are adhering to this voluntary prohibition.

6.8.3 Voluntary surrender/destruction

Voluntary surrender/destruction can be used to remove food that is not suitable for human consumption from the food chain. It can be used when the owner of the food agrees the food is not suitable for human consumption.

It is recommended that a receipt be issued for food that is voluntarily surrendered to the Competent Authority for destruction, which:

- confirms that the food has been voluntarily surrendered to the Competent Authority for destruction (with reasons)
- is signed and counter-signed by the authorised officer and the person surrendering the food
- includes space for recording the time, place, and method of destruction of the food
- is retained by the Competent Authority

As part of the voluntary surrender, it is recommended that the Competent Authority secure an agreement by the owner to pay the reasonable expenses of destruction or disposal. If this is not done the Competent Authority will bear the expenses itself.

The use of voluntary procedures may also contribute to a defence in any subsequent prosecution. It could, for example, be argued that the food was not so contaminated that it had to be seized.

The fact that a Justice of the Peace had condemned food may be persuasive in any prosecution but would not necessarily establish an offence. It would still be necessary for a case to be proved beyond reasonable doubt.

6.9 Prosecution

6.9.1 Introduction

Before commencing prosecution proceedings for offences of food law, the Competent Authority needs to ensure that:

- it has considered its own enforcement policy and the Code for Crown Prosecutors.
- evidence of the non-compliance is obtained
- continuity of evidence is maintained

6.9.2 Time limit for prosecution

Where Competent Authorities decide to prosecute, they need to ensure that they commence proceedings within any timeframe as set out in the relevant legislation. For example, regulation 16 of The Food Hygiene (Wales) Regulations 2006 and section 34 of the Food Safety Act 1990 provides that no prosecution shall begin after three years from the commission of the offence, or one year from its discovery by the prosecutor, whichever is the earlier.

6.10 Follow-up checks

Competent Authorities are required to take appropriate measures to ensure that the FBO remedies non-compliances and prevents further occurrences of such non-compliances³⁰.

Follow-up checks can be used to ensure non-compliances have been remedied. The Code outlines when follow-up checks are to be undertaken. Officers may also consider the:

- action(s) required following the earlier official control
- history of compliance
- FBO's attitude towards food safety
- date of the next official control

Appropriate measures to verify that compliance has been achieved may be undertaken physically or remotely and this could include actions such as:

- physical revisits to the food business
- reviewing information provided by the business remotely following an official control, for example, photographs and/or documentation
- sampling
- information/intelligence gathering

Authorised officers are to use their professional judgement when determining the timing of any follow-up check following the earlier official control, along with the frequency of follow-up check that may be required. The type of follow-up check(s), their timing and their frequency are to be reasonable, proportionate, risk-based and consistent.

6.11 Enforcement in establishments subject to approval

6.11.1 Introduction

In addition to the enforcement powers detailed above, authorised officers have other powers available to them under The Official Feed and Food Controls (Wales) Regulations

³⁰ Article 138 of Regulation (EU) 2017/625

2009, in respect of establishments subject to approval under Regulation (EC) No 853/2004.

Powers to withdraw or suspend the approval or conditional approval of an establishment subject to approval under Regulation (EC) No 853/2004, are provided by article 138(2)(j) of Regulation (EU) 2017/625.

The immediate effect of the suspension or withdrawal of an establishment's approval is that the establishment cannot be used for any activities which would render it subject to approval under Regulation (EC) No 853/2004 or place POAO on the UK market.

Competent Authorities also have powers to serve RANs in establishments subject to approval under Regulation (EC) 853/2004, including those establishments that require approval but that are not yet approved. When non-compliance is discovered in establishments (subject to approval under Regulation (EC) No 853/2004) the Competent Authority is recommended to explore other enforcement options to control the food hazards before considering suspension or withdrawal.

Non-compliance is not necessarily sufficient reason to justify the immediate suspension or withdrawal of an establishment's approval or conditional approval. Where appropriate, a reasonable opportunity may be allowed for the FBO to achieve compliance.

Detailed guidance regarding withdrawal and suspension of approval can be found in [Approval of Establishments: Guidance for local authorities](#)

6.11.2 Notifications of suspension or withdrawal of approval or conditional approval

Under article 138(3) of Regulation (EU) 2017/625, the Competent Authority is required to notify the FBO in writing of its decision to suspend or withdraw an establishment's approval or conditional approval.

This notification would:

- give the reasons for the suspension or withdrawal³¹
- give the matters necessary to satisfy the requirements of the regulation
- make it clear that activities requiring approval cannot be undertaken
- inform the FBO of their right of appeal, against the decision, including information on the time limit³², and provide the address of the Magistrates' Court where such an appeal can be made

Copies of notifications are to be retained on the Competent Authority's files. The Competent Authority is to notify the FSA when an establishment's approval or conditional approval has been suspended or withdrawn (see chapter 2).

³¹ Article 138(3)(a) of Regulation (EU) 2017/625

³² Regulation 12(2) of The Official Feed and Food Controls (Wales) Regulations 2009

6.11.3 Appeals against suspension or withdrawal of approval or conditional approval

The FBO has the right to appeal to a relevant Court against the decision to withdraw or suspend an approval or conditional approval. Rights of appeal are subject to regulation 12 of The Official Feed and Food Controls (Wales) Regulations 2009. The establishment cannot continue operating whilst an appeal is being determined. This time period runs from the date on which the notice of the decision is served on the relevant person, irrespective of whether it is a suspension or withdrawal.

6.11.4 Detention Notices

Powers to serve Detention Notices in respect of establishments subject to approval under Regulation (EC) No 853/2004 are provided by regulations 9 of The Food Hygiene (Wales) Regulations 2006.

Such action is to be proportionate to the risk to public health and used only where immediate action is required to ensure food safety.

If a RAN is served due to the conditions or practices found on the inspection of an establishment subject to approval under Regulation (EC) No 853/2004, consideration is also had as to whether food at the establishment is detained for the purposes of examination by means of a Detention Notice under regulation 9 of the Food Hygiene (Wales) Regulations 2006.

6.11.4.1 Detention Notices

Regulation 9 of The Food Hygiene (Wales) Regulations 2006 makes provision for the detention of any food for the purposes of examination, including the taking of samples, by the service of a Detention Notice.

A regulation 9 Detention Notice differs to a notice served under section 9 of the Food Safety Act 1990. It can only be served in an establishment that is operating in a manner that requires approval or is approved.

Circumstances which could lead to the issuing of a Detention Notice include where there are indications or suspicions that food at an establishment is unsafe and therefore examination is necessary.

If the authorised officer is satisfied that the food no longer needs to be detained, the relevant notice is required to be withdrawn by means of a further notice in writing.

6.11.5 Template forms

The following [templates](#) can be found on the FSA's communications platform:

- Detention Notice
- Withdrawal of a Detention Notice

[Model forms](#) for the withdrawal or suspension of approval can also be found on the FSA's communication platform.

6.12 Enforcement regarding imported food

6.12.1 Enforcement powers for imported food not of animal origin

The Official Feed and Food Controls (Wales) Regulations 2009 provides the enforcement powers for Competent Authorities in carrying out official controls on FNAO from outside the UK, either at the point of entry or inland.

6.12.1.1 Detention

Where, for the purpose of examination at points of entry, or deferred examination at an ETSF, international rail terminals or other place of destination, an authorised officer has doubts about the compliance, identity or stated destination of a consignment, article 65 of Regulation (EU) 2017/625 and regulation 31 of The Official Feed and Food Controls (Wales) Regulations 2009 allow the product to be detained pending the results of any examination associated with the official controls.

Where an authorised officer has detained a food consignment pending results of examination, they are required to notify in writing the person/importer responsible for it, serving a notice under Regulation 32 of the Official Feed and Food Controls (Wales) Regulations 2009. The notice is required to specify that the food is not to be removed from the place stated, until the authorised officer has properly considered the results of the examination.

Article 65 of Regulation (EU) 2017/625 and regulation 31 of The Official Feed and Food Controls (Wales) Regulations 2009 do not specify a time limit for examination and investigation of consignments. However, such examinations, and/or detention periods, are recommended to be completed as quickly as possible to avoid unreasonable disruption to the trade.

Where samples are submitted for analysis or examination, and the consignment is detained pending the results, it is recommended that Competent Authorities inform the analyst or examiner of that fact and ensure that the consignment is stored appropriately and securely.

It is also advised that the importer or the importer's agent is informed of the analysis/examination results as soon as possible and that they are given a copy of the certificate of analysis/examination.

Arrangements are required to be in place to ensure that detained food is stored appropriately, particularly to avoid contamination of other goods.

6.12.1.2 Food consignments which are injurious to human or animal health or are unsafe

Article 67 of Regulation (EU) 2017/625 requires that where official controls indicate that a consignment is injurious to human health or is unsafe, it is isolated or quarantined pending any further decision.

The Competent Authority need to retain the consignment under official detention pending its destruction, or it being subject to special treatment in accordance with article 71(1) and 71(2) of Regulation (EU) 2017/625.

Food which is to be destroyed or disposed of needs to be dealt with in such a manner as to ensure that there is no possibility of it re-entering the food chain. Copies of waste disposal notes are to be kept on file.

6.12.1.3 Food consignments not complying with food law

If it appears to an authorised officer upon inspection or examination of food, that a batch, lot, or consignment fails to comply with food law, regulation 32 of The Official Feed and Food Controls (Wales) Regulations 2009 allows, after having heard from the operator responsible for it, for the authorised officer to serve a notice requiring:

- destruction of the relevant consignment in accordance with article 67 of Regulation (EU) 2017/625
- the food be subjected to special treatment in accordance with article 71 of Regulation (EU) 2017/625
- re-dispatch of the food outside GB in accordance with article 72 of Regulation (EU) 2017/625
- another use of the food for purposes other than those for which they were originally intended

In practice, the options specified in the notice will need to be drawn up after appropriate consultation with the person importing the food or their representative.

Any decision on the approval of alternative usage of rejected goods may be informed by any relevant guidance on the appropriateness of the alternative use or re-exportation.

6.12.1.4 Special treatments

Special treatment can consist of:

- treatment or processing to bring food into line with the requirements of:
 - UK law
 - the non-UK country to where it is to be re-dispatched
- treatment in any other suitable manner for purposes other than human or animal consumption

Where special treatment is permitted, liaison with any other relevant Competent Authorities is required to ensure the necessary processing has been carried out³³. This process can also be used where a non-conforming product is being imported specifically for the purpose of undergoing treatment to comply with UK law.

Special treatment can include decontamination, where appropriate, but not dilution.

6.12.1.5 Re-dispatch of consignments

A consignment can only be re-dispatched outside GB where the³⁴:

- destination has been agreed with the operator responsible for the consignment

³³ Article 71(2)(b) of Regulation (EU) 2017/625

³⁴ Article 72 of Regulation (EU) 2017/625

- operator has informed the Competent Authority for the non-UK country of destination why it has been rejected for import into GB
- Competent Authority of the non-UK country of destination (if not the non-UK country of origin) has notified the relevant GB Competent Authority of its willingness to accept the consignment

The consignment is required to be officially detained pending re-dispatch.

Article 69 of Regulation (EU) 2017/625 requires that re-dispatch takes place within 60 days of the Competent Authority notifying the operator of the destination of the consignment. However, this period can be extended to obtain results from a second expert opinion, as long as there is no adverse effect to human health. Otherwise, the consignment shall be destroyed.

Where a product is to be re-dispatched, notifications identifying the product and its final destination are to be provided to the FSA, who will then inform HMRC.

6.12.1.6 Appeals against notices served under The Official Feed and Food Controls (Wales) Regulations 2009

The importer is to be given the Competent Authority's decision by way of a notice in writing.

There is a right of appeal against the Competent Authority's decision provided by regulation 33 of The Official Feed and Food Controls (Wales) Regulations 2009. Appeals against the notice are required to be made within one month of the notice being issued.

6.12.1.7 Other provisions

Imported food failing food safety requirements can also be subjected to Food Safety Act 1990 provisions to ensure appropriate action is taken, which include detention and seizure powers.

In deciding on the action to take, authorised officers need to have regard to:

- The Official Feed and Food Controls (Wales) Regulations 2009
- The Contaminants in Food (Wales) Regulations 2013
- any relevant Emergency Control Regulations, which might provide for specific detention powers and notice provisions in relation to certain foods

6.12.2 Enforcement powers for imported Products of Animal Origin

Where illegal imports of POAO are found inland in an area/premises outside Customs control, the local Competent Authorities for that area have responsibility for enforcement action.

Where an authorised officer wishes to detain any POAO found inland, in order to investigate further to establish its safety or compliance, voluntary co-operation might be sought in the first instance.

In situations where this is not possible, enforcement provisions are provided under The Trade in Animals and Related Products (Wales) Regulations 2011.

6.12.3 Further guidance

Further [guidance on the enforcement provisions](#) relating to imported food, including procedures, notices and forms, is available on the FSA's communications platform.

6.13 Crown establishments

6.13.1 Introduction

This section provides information regarding the approach to enforcement in Crown premises and in premises that are occupied by the police. It does not apply to premises that are occupied by the National Health Service (NHS) or NHS Trusts, since these are not Crown premises.

6.13.2 Powers of entry and official controls

6.13.2.1 Food Safety Act 1990

The powers of entry under section 32 of the Food Safety Act 1990 may be used in respect of food standards issues, in relation to police premises and most Crown premises (unless Welsh Ministers certifies that powers of entry shouldn't be able to be exercised in relation to premises held or used by the Crown) to investigate complaints and to carry out official controls in the same way as they do in any other food business. Authorised officers therefore have the power to enter police premises and most Crown premises.

The provisions of the Food Safety Act 1990 do not, however, apply to His Majesty the King or to the Duke of Cornwall personally, nor to premises occupied by them in their private capacities such as their private residences at Sandringham or Highgrove.

Additionally, a national security certificate may have been issued by a Welsh Minister certifying that powers of entry under the Food Safety Act 1990 cannot be exercised. If an authorised officer seeks entry to Crown premises and is informed that such a certificate has been issued, the authorised officer is entitled to see the certificate or a copy of it.

6.13.2.2 Food Hygiene (Wales) Regulations 2006

The scope of The Food Hygiene (Wales) Regulations 2006 extends to police premises, Crown premises and to people in the public service of the Crown. Authorised officers therefore have power to enter police premises and Crown premises to investigate complaints and to carry out official controls in the same way as they do in any other food business.

The powers of entry under regulation 14 of The Food Hygiene (Wales) Regulations 2006 may be used in relation to Crown premises, as the regulations do not contain the specific exemptions for certain members of the Royal Family or certain Royal residences afforded by the Food Safety Act 1990.

It is recommended that Competent Authorities use discretion when exercising their powers in respect of Crown premises, and in practice, look to adopt the same approach to the enforcement of The Food Safety (Wales) Regulations 2006 in respect of Crown premises as they do in respect of the Food Safety Act 1990.

6.13.2.3 Conduct and frequency of official controls

Food businesses in Crown and police premises, other than temporary or field catering facilities at military training camps, are included in the Competent Authority's planned official control programme in accordance with the Code.

Permanent kitchens serving military training camps would receive official controls at times they are in use, within the bounds of security restrictions that will be dependent on the organisation using the facility at the time.

Mobile field kitchens are not to be subject to interventions by the Competent Authority.

6.13.3 Categories of Crown premises

For the purposes of obtaining entry, Crown premises fall broadly into three categories, although premises may move from one category to another between official controls.

Group 1 - includes premises situated on Crown land where there are normally no security implications, for example, restaurants in museums or Royal Parks. These premises are to be treated like any other food business.

Prior arrangement of an official control at a Group 1 premises is not normally required.

Group 2 - includes premises with controlled entry but normally minimal security implications. Most government and police premises fall within this category. They are similar to many private businesses with security systems.

First visits to Group 2 premises are to be by prior arrangement. Future visits may be unannounced, but arrangements for subsequent visits are recommended to be agreed at the first inspection and confirmed in writing.

Group 3 - includes premises where unannounced entry is not possible because of security implications and/or for the personal safety of the authorised officer, for example, HM Forces, defence and national security establishments, prisons and remand centres, and parts of police premises that accommodate prisoners.

Group 3 premises are always to be visited by prior arrangement with the appropriate contact at the establishment concerned, for example, the defence establishment security officer, the commanding officer or nominated representative of an HM Forces establishment, the Governor of a prison service establishment, or the officer in charge of police premises. This will enable the authorised officer to obtain entry without undue delay. The contact may be reminded of the power of entry if an authorised officer considers that the suggested appointment is too far in advance.

Authorised officers who have not been security cleared will be subject to visitor control procedures and escorted at all times. It is recommended that authorised officers carry an identity card that incorporates their photograph.

There may be times when it will not be possible for an official control to take place or continue in Group 3 premises. Any such reasonable restriction would not be regarded as obstruction.

If required, the authorised officer's name, date of birth, card or pass number (if any) and the registration number of the authorised officer's motor vehicle needs to be given in advance of a visit to Group 3 premises.

If the Competent Authority is in doubt as to how to classify particular premises to which this section applies, it is recommended that they be treated as Group 3 premises and reviewed at a later stage, if necessary.

An incident such as a food poisoning outbreak may require an authorised officer to visit a premises at short notice even though prior notice would normally be required. A telephone notification that the authorised officer is on the way is essential in Group 3 premises and may save time in gaining entry to Group 2 premises. It is not normally necessary in such circumstances to give more than the briefest notice of such a visit.

Authorised officers need to be aware of matters of confidentiality when visiting those parts of premises that accommodate prisoners. Such matters may be discussed when the visit is arranged.

Official controls are to be confined to areas used by the food business or where records relating to it are held, unless the visit is connected with the investigation of an outbreak of foodborne illness and it is necessary, as part of the investigation, to inspect other areas.

Military activities are not to be impeded or interrupted by a visit.

Authorised officers will need to conform to the security requirements of the establishment concerned, including baggage inspections and identity checks.

6.13.3.1 Photographs

It is recommended that before taking any photographs, making sketches, or taking measurements on Group 3 premises, the authorised officer discuss such matters with the escorting officer and take account of any requirements.

Unless absolutely necessary to illustrate a possible contravention of the legislation, photographs on Group 3 premises are recommended not to include individuals.

Additionally, if photographs are taken within a prison or remand establishment, they are to avoid identifying any individual.

6.13.4 Enforcement

6.13.4.1 Food Safety Act 1990

Section 54(2) of the Food Safety Act 1990 states that the Crown is not criminally liable if it contravenes the Act or Regulations or Orders made under it. This means that the Crown cannot be prosecuted if it contravenes the Act.

A Competent Authority may, however, apply in the King's Bench Division of the High Court, for a declaration that any act or omission of the Crown, which amounts to a contravention of the Food Safety Act 1990 or regulations made under the Act, is unlawful.

The identity of the proprietor of the food business concerned needs to be carefully considered if the question of action under food law arises.

Contract caterers operating on Crown premises can be prosecuted as they are not subject to this exemption. Careful consideration also needs to be given to the question as to whose failure gave rise to the contravention.

Although contract caterers operating on Crown premises can be prosecuted, structural failures might be the responsibility of the Crown itself.

Any application under section 54(2) is to be addressed to the Welsh Ministers or Head of Department and sent to the Solicitor for the relevant Government Department.

The summons would be sent to the principal officer of a non-Departmental Government body.

6.13.4.2 The Food Hygiene (Wales) Regulations 2006

Unlike the Food Safety Act 1990, The Food Hygiene (Wales) Regulations 2006 do not exempt the Crown if it contravenes the regulations. This means that the Crown can be prosecuted if it contravenes the regulations.

It is recommended that Competent Authorities use discretion when exercising their powers in respect of Crown premises and, in practice look to adopt the same approach to the enforcement of The Food Hygiene (Wales) Regulations 2006 in respect of Crown premises as they do in respect of the Food Safety Act 1990.

6.13.4.3 Position of individual civil or government servants

Although the Crown is immune from prosecution under the Food Safety Act 1990, individuals in the public service of the Crown can still be prosecuted in the same way as any other person.

Failure to comply with the provisions of food law might therefore expose an individual civil or government servant to the risk of prosecution.

It is recommended that Competent Authorities do not consider prosecuting an individual civil or government servant as a substitute for action against the Crown. Action would only be considered if the circumstances result in the prosecution of an individual in the case of any other business.

6.13.4.4 Statutory Notices

The service of an EPN does not itself make the recipient criminally liable. Such notices can therefore be served on the Crown where it is the FBO concerned.

EPNs are to be served on the appropriate Welsh Minister or Head of Department and copied to the Solicitor as described in section 6.12.4.1.

In order that such notices can be acted upon without undue delay, it is recommended that they also be copied to the person in charge of the premises concerned, for example, the Governor of a prison or the Commanding Officer of a military establishment.

Competent Authorities may apply in the normal way to a Magistrates' Court for an EPO on the whole or part of a Crown premises, or to prevent the operation of a particular process or treatment or use of a piece of equipment in a business run by the Crown.

Although a Magistrates' Court can impose an EPO, it cannot impose a PO. A PO can only be made when there has been a conviction under relevant food law.

The FBO in Crown premises can appeal in the normal way to a Magistrates' Court against an Improvement Notice and can also appear to argue against the imposition of an EPO.

The Crown can also appeal against a refusal to issue a certificate lifting an EPO.

A Competent Authority can apply for a declaration in the High Court if a business run by the Crown fails to comply with an EPO.

6.13.4.5 Liaison with the Primary Authority/the FSA

It is recommended that Competent Authorities report any difficulties encountered in the enforcement of food law in Crown premises to the appropriate primary authority, or, if there is no primary authority, or they are unable to assist, to the FSA.

Chapter 7 Matters relating to live bivalve molluscs (shellfish)

7.1 Introduction

Chapter 7 deals with:

- official controls and enforcement relating to live bivalve molluscs LBMs and aspects of:
 - Regulation (EC) No 852/2004 and 853/2004
 - Commission Regulation (EC) No 2073/2005
 - Commission Delegated Regulation (EU) 2019/624
 - Commission Implementing Regulation (EU) 2019/627 relating to LBMs

The provisions relating to LBMs apply to live echinoderms, live tunicates, and live marine gastropods, except for the provisions on purification. The classification requirements do not apply to scallops, live marine gastropods and *Holothuroidea* that are not filter feeders.

7.2 The local market exemption (small quantities)

Regulation (EC) No 853/2004 does not apply to the direct supply of small quantities of primary products to the final consumer or to local retail establishments directly supplying the final consumer. For LBMs, a small quantity equates to a total amount of not more than 25 tonnes harvested in a calendar year. The maximum harvested in a year can be made up of different species so long as neither the total allowance for each species nor the overall total is exceeded. Allowances are detailed in Table 5.

Table 5 – Allowances for small quantities of LBMs

Species	Annual maximum amount
Cockles – <i>Cerastoderma edule</i>	25.0 tonnes
Oysters – <i>Ostrea edulis</i> and <i>Crassostrea gigas</i>	5.0 tonnes
King Scallops – <i>Pecten maximus</i>	5.0 tonnes
Queen Scallops – <i>Aequipecten opercularis</i>	10.0 tonnes
Mussels – <i>Mytilus</i> spp.	20.0 tonnes
Other LBMs	10.0 tonnes
Marine Gastropods	20.0 tonnes

Although exempt from the detailed requirements of Regulation (EC) No 853/2004, harvesters supplying small quantities are required to comply with food safety and traceability requirements³⁵. The general traceability requirements for POAO in Regulation (EU) No 931/2011 also apply.

In order for harvesters of small quantities to meet food safety requirements, FBOs are to consider the risks associated with LBMs such as microbiological contamination, viral contamination, marine biotoxins and chemical contamination, and ensure that such risks are controlled.

These requirements do not apply to LBMs gathered for private domestic use and Competent Authorities may consider it reasonable to presume, unless there is an indication to the contrary, that individuals gathering small amounts of LBMs totalling less than 5 kg in a day are gathering for private domestic use. These levels are for 'whole' LBMs and include the weight of the shell. However, this does not prevent Competent Authorities from pursuing instances where there is a suspicion of fraudulent activity or where public health could be at risk.

7.3 Production and relaying areas

7.3.1 Classification and monitoring of production and relaying areas

It is the responsibility of the FSA to classify LBM production and relaying areas. Classification of these areas is provided following [an application](#) for classification (requested by the harvester and local authority) and the area has met the relevant legal requirements and those in the FSA's [Protocol for classification of shellfish production areas for Wales and England](#). This includes the completion of a sanitary survey (if necessary) and initial classification sampling.

A list of classified LBM production and relaying areas and sampling plans is published on the [FSA website](#).

7.3.2 Transfer of seed live bivalve molluscs to classified production areas

Seed LBMs might be transferred from areas that are not classified as production areas for 'growing on' within a production area of any class. Such LBMs are to be genuine 'seed shellfish' (shellfish too small to be marketed). In fisheries regulated for conservation purposes under the Sea Fish (Conservation) Act 1967, transfers may only be carried out on approval of the holder of the Regulating Order for that fishery and in discussion with the Fish Health Inspectorate, regarding biosecurity.

Transfers of 'seed shellfish' are permitted, provided they remain in the classified production area for a period of not less than six months before they are harvested for human consumption. It is restricted to the seeding of new areas or the re-seeding of existing classified production areas. If new areas are seeded, they are required to be classified before harvesting can take place. Harvesters are to inform the relevant Competent Authority if any such movements are contemplated.

³⁵ Articles 14 and 18 of Regulation (EC) No 178/2002

7.4 Shellfish liaison arrangements

It is essential for the effective enforcement of the regulations that adjoining Competent Authorities, including PHAs, maintain effective liaison arrangements.

It is recommended that each shellfish local action group include representatives of other relevant local and national organisations, including:

- the Chief Fishery Officer of the Inshore Fisheries and Conservation Authority
- Natural Resources Wales
- official testing laboratories

Membership of the shellfish local action group may also include fishermen or shellfish gatherers at the discretion of the relevant Competent Authority. The function of the group is likely to vary depending on the local shellfish industry.

It is recommended that shellfish local action groups consider holding periodic meetings with members of the local shellfish industry, particularly if there are difficulties over enforcement or interpretation of the regulations.

The group's functions may include:

- the identification of local LBM classified production and relaying areas (if any) (working with the industry)
- arrangements for registration documents for the movement of live shellfish
- arrangements for the issuing of Notice of Temporary Closure of Production Area (Closure Notices) covering waters from more than one Competent Authority area
- arrangements for the issuing of temporary downgrade in classification status in accordance with [Guidance for Local Action Groups \(LAGs\) on handling high E.coli results, biotoxin results and pollution events – classification and monitoring of live bivalve molluscs](#) (LAG guidance)
- arrangements for the detention/recall of LBMs affected by any Closure Notice or where further processing is needed following temporary downgrade
- effective local notification procedures to advise interested parties of action taken under the LAG guidance
- arrangements for effective communication and sharing of information between various agencies and organisations to assist with identify/anticipating potential problems

7.5 Registration document for the movement of LBMs and exemptions

7.5.1 Registration documents for the movement of LBMs

The Code provides that unless exempt, each gatherer of LBMs (including live Pectinidae, echinoderms, live tunicates and live marine gastropods and Holothuroidea) to be placed on the market, is to provide a registration document identifying each batch that they harvest.

It is recommended that the registration document for the movement of LBMs is completed upon landing. The registration document is required to accompany the

batch from the classified harvesting area (or in the case of Pectinidae, non-filter feeding gastropods and echinoderms from the area of sea it is harvested) and between establishments, up to and including arrival of the batch at a relaying area, purification or dispatch centre or processing establishment³⁶.

FBOs are required to keep copies of registration documents for each batch sent and received for at least twelve months after its dispatch or receipt, or a longer period as specified by the Competent Authority³⁷.

7.5.2 Examination of registration documents for the movement of LBMs

The Code provides that Competent Authorities carry out regular examinations of the use and completion of registration documents to verify accuracy. Examination of the documents can be carried out as part of the official control of dispatch or purification centres or processing establishments. However, checks can be made at any part of the traceability chain.

The registration document is required to include specific information and be legible³⁸. The date of receipt is also required to be recorded on the registration document by the FBO at the dispatch or purification centre, relaying area or processing establishment when the batch is received.

The same requirements apply to batches of Pectinidae (scallops) and non-filter feeding gastropods harvested from outside classified production areas. Although the classification status of the production area (class A, B or C) is not appropriate, the location of the production area is to be described in as precise detail as is practicable or by a code number, for example, International Council for the Exploration of the Sea coordinates or Ordnance Survey grid references.

Competent Authorities are to be aware that registration documents for the movement of LBMs may be completed on behalf of the gatherer, for example, by an 'agent', providing all required information relating to the batch is appropriately completed. The supplying harvester(s) is required to be able to support the declaration made on the registration document by the 'agent'. Competent Authorities may wish to consider amending their registration forms for the movement of LBMs to reflect this activity.

Competent Authorities are to also be aware of the commercial advantages of abusing the registration document procedure, for example, by suggesting that LBMs have been taken from waters with a superior microbiological quality.

7.5.3 Verifying and monitoring registration documents

It is not possible for Competent Authorities to monitor every landing in their area, or to detect abuse in the use of registration documents by concentrating resources on sampling only. Competent Authorities are advised to familiarise themselves with the commercial activities within ports in their local area and implement some degree of

³⁶ Annex III, section VII, chapter I and IX of Regulation (EC) No 853/2004

³⁷ Annex III, section VII, chapter I, paragraph (6) of Regulation (EC) No 853/2004

³⁸ Annex III, section VII, chapter I, paragraph (4) of Regulation (EC) No 853/2004

monitoring of landings of LBMs and other shellfish, for example, scallops. This can be achieved through effective and periodic liaison with other statutory inspectorates, such as the Welsh Government Marine and Fisheries Division and Natural Resources Wales.

Such statutory inspectorates can provide other vital information to help verify the information contained in registration documents and the activities of harvesters for example the seasonality of the harvesting, minimum landing sizes, checks on whether shellfish were harvested under the appropriate permits

Competent Authorities are to ensure that establishments are only accepting shellfish with the appropriate registration documents for the movement of LBMs. It is recommended that Competent Authorities receiving shellfish from outside their Competent Authority area contact the issuing Competent Authority when inspecting registration documents for the movement of LBMs to verify details.

In addition to local liaison, it is recommended that Competent Authorities also have in place procedures to assist tracking and verifying the authenticity of registration documents they have issued. For example, the use of one or a combination of coloured carbon tear-offs and/or embossed Competent Authority stamps in conjunction with unique reference numbers on documents, to help ensure registration documents are not easily falsified. In some circumstances it may be prudent to limit the number of documents issued to each harvester or ask for sight of previously completed documents, to assist in effectively monitoring or tracking products for traceability and verification purposes.

In order to ensure efficiency of the verification process, it is recommended Competent Authorities include the details of the harvesters to whom registration documents have been issued and the production areas for which the harvester requires the registration documents.

7.6 Action following non-compliant official control sampling

7.6.1 Notice of Temporary Closure of Production Area (Closure Notices)

The Code provides that's where the following present a risk to human health, Competent Authorities are to take prompt action:

- *E.coli* LBM results are recorded above trigger levels
- results are received equal to or above regulatory marine biotoxin limits
- any pollution event, which is likely to have an adverse impact on LBMs in a classified production area

Guidance on the implementation of short term control measures to protect public health can be found in the FSA's [LAG guidance](#).

The Code provides that where a Closure Notice is used, they are to be issued quickly to inform interest parties. It is recommended that all known FBOs in their district, who either have registration documents already issued, or have an exemption, are notified of the Closure Notice and its effect. This might best be achieved by sending a copy of the Closure Notice to all known interested parties.

It is recommended that Closure Notices are prominently displayed where food businesses and casual gatherers harvesting LBMs might reasonably be expected to see them.

A model [Notice of Temporary Closure of Production Area \(live bivalve molluscs/shellfish\)](#) can be found on the FSA's communication platform.

Where a Closure Notice has been issued, it is recommended that a copy is forwarded to the FSA at shellfish.wales@food.gov.uk and Wales.foodincidents@food.gov.uk.

Any person who contravenes or fails to comply with the closure would be committing an offence³⁹.

7.7 Reporting of illegal harvesting activity

It is an offence to place LBMs on the market that have been harvested from areas that are not classified, or which are unsuitable for food safety reasons. It is also illegal for food businesses to place on the market scallops and non-filter feeding gastropods harvested from outside classified areas, unless they meet food safety requirements for microbiological criteria⁴⁰, marine biotoxins⁴¹ or chemical contamination⁴².

Competent Authorities are to monitor harvesting areas within their remit, including areas affected by Closure Notices, to ensure illegal harvesting does not occur.

Where Competent Authorities become aware of such instances, they advised are to consider appropriate surveillance and follow-up enforcement.

It is recommended that Competent Authorities establish close working relationships with other local inspectorates, such as IFCAs, Gangmasters Licensing Authority and other local regulators who might be able to assist in combating illegal harvesting, for example, through surveillance, notification of fishing activity in waters under restrictions or assistance in the verification of information in registration documents for the movement of LBMs.

All cases of illegal harvesting are to be reported to the [FSA's NFCU](#)

Competent Authorities can also contact the [FSA'S NFCU](#) for further advice on surveillance and enforcement.

7.8 Standards for purification centres

Regulation (EC) No 853/2004 outlines the structural and hygiene requirements for purification centres.

³⁹ Regulation 17(1) of The Food Hygiene (Wales) Regulations 2006

⁴⁰ Commission Regulation (EC) No 2073/2005

⁴¹ Regulation (EC) No 853/2004

⁴² Commission Regulation (EC) No 1881/2006

[Guidance for Local Authority Authorised Officers on the Inspection of Purification Systems for Live Bivalve Molluscs in Wales, England and Northern Ireland](#) is available to assist Competent Authority official controls of purification establishments.

7.9 Shellfish identification marks

Competent Authorities may wish to periodically, select a batch or consignment from a retail outlet or restaurant as part of the monitoring of the use of shellfish identification marks. Competent Authorities are recommended to trace the batch or consignment back through an auction hall, purification or dispatch centre or processing establishment, to the original gatherers to establish that records relating to the traceability of the batch and the identification mark are in order. Competent Authorities are recommended to co-operate with other Competent Authorities in any random check through the production and distribution chain.

Note: retailers are to retain the label/identification tags attached to the packaging of LBMs that are not in individual consumer-size packages for at least 60 days⁴³ after splitting up the contents to assist in tracing product in the event of a report of illness.

If any checks suggest that traceability documents, such as the registration documents for the movement of LBMs, identification marks or records, are not being used in accordance with the regulations, the Competent Authority is to carry out an investigation to establish where the procedures have not been properly observed. In such cases they are to also consider taking appropriate enforcement action and increasing the frequency of random checks through the distribution chain until they are satisfied that the appropriate procedures are being followed.

7.10 Template forms and additional guidance

The following [template forms](#) can be found on the FSA's communications platform:

- Model LBM/Live Shellfish Registration Document
- Model Notice of Temporary Closure of Production Area(s) (live bivalve molluscs/shellfish)

Further guidance regarding [shellfish classification](#) can be found on the FSA website.

⁴³ Annex III, section VII, chapter VII, paragraph 3 of Regulation (EC) No 853/2004

Chapter 8 Subject specific guidance

8.1 Introduction

Chapter 8 deals with matters relating to:

- fishery products
- meat
- raw milk and dairy products
- egg packing centres
- egg products and liquid eggs
- food for specific groups
- temperature control provisions
- bottled water
- food waste and animal by-products (ABP)
- distance selling/mail order

The FSA has produced detailed guidance regarding the [Approval of establishments: guidance](#) for local authorities and [Primary production food hygiene inspection guidance](#) which may be of assistance to authorised officers when dealing with some topics within this chapter.

8.2 Matters relating to fishery products

8.2.1 Introduction

This section provides specific guidance to Competent Authorities on the application and enforcement of the fishery products aspects of Regulation (EC) No 852/2004, Regulation (EC) No 853/2004 and Commission Implementing Regulation (EU) 2019/627.

8.2.2 Competent Authority

Competent Authorities are responsible for enforcement of the regulations at their local level, and therefore approve fishery products establishments, register certain markets and fishing vessels, and otherwise enforce the regulations.

8.2.3 Scope of approval

The provisions of Regulation (EC) No 853/2004 do not apply to retail unless expressly indicated. A retail establishment which supplies fishery products to the final consumer therefore does not need to be approved. Approval would, however, be required where operations are carried out to supply fishery products to other establishments unless that supply is to other retail establishments only and is a marginal, localised, and restricted activity.

Factory and freezer vessels, auctions and wholesale markets are required to have approval and be inspected at regular intervals to check for compliance with food safety, hygiene, temperature controls and structural requirements and subject to Regulation (EC) No 853/2004, annex III, section VIII, chapters I and II.

8.2.4 Direct supply of small quantities of fish

The regulations do not apply to the direct supply of small quantities of fishery products (primary products) from the producer to the final consumer or to local retail establishments directly supplying the final consumer. For these purposes, a small amount is considered a total amount of not more than 25 tonnes of fishery products (not including live bivalve molluscs) in a calendar year. While the regulations do not apply to this allowance, the supplier is to ensure that these products meet the food safety requirements for placing food on the market.

8.2.5 Additional guidance

The following [aide memoire and guidance](#) can be found on the FSA's communications platform:

- Fishing Vessel aide memoire
- Freezer Vessel aide memoire
- Factory Vessel aide memoire
- Reefer Vessel aide memoire

Although the content of these documents is regarded as the minimum required, Competent Authorities may adapt them as necessary to meet local requirements.

Guidance on the requirements of UK law relating to the seafood industry can be obtained from [Seafish](#).

8.3 Matters relating to meat

8.3.1 Meat - Approval of establishments

The FSA is responsible for approving establishments subject to veterinary control (such as slaughterhouses, cutting plants placing fresh meat on the market and game handling establishments) as well as any cold stores, meat products, minced meat, meat preparations, mechanically separated meat premises and edible co-products plants that are co-located with approved slaughterhouses, cutting plants or game handling establishments, or wholesale meat markets.

Competent Authorities are responsible for approving all other food premises handling POAO (except for co-located premises described above) and for registering establishments that are exempt from approval.

8.3.2 Enforcement in meat establishments

The FSA is responsible for enforcement in meat establishments that require veterinary control (see above).

8.3.2.1 Co-located establishments

The FSA is responsible for hygiene enforcement in meat products, minced meat, meat preparations, mechanically separated meat plants, cold stores or edible co-products plants that are co-located with an approved slaughterhouse, cutting plant or game handling establishment. When a co-located meat establishment does not require approval, for example, a retail butcher, dual Competent Authority /FSA enforcement continues to apply.

8.3.2.2 Stand-alone establishments

Competent Authorities are responsible for enforcement in stand-alone establishments that produce meat products, minced meat, meat preparations and mechanically separated meat, and in establishments exempted from approval under Regulation (EC) No 853/2004.

8.3.2.3 Wild game

The FSA's [Wild Game Guidance](#) provides guidance on the legal requirements which apply to the handling, examination, preparation, storage, transport and supply of wild game and wild game meat for human consumption. This guidance also highlights any exemptions from Regulation (EC) No 853/2004 and Regulation (EC) No 852/2004.

8.3.3 Exemptions from approval

Articles 1 and 4 of Regulation (EC) No 853/2004 provide the relevant exemptions from the requirements for approval. These, along with all other approval exemptions can be found in the FSA's guidance [Approval of establishments: Guidance for local authorities](#).

8.3.3.1 On-farm slaughter and cutting of small quantities of poultry and lagomorphs

Regulation (EC) No 853/2004 does not apply to the direct supply, by the producer, of small quantities of meat from poultry (farmed birds except ratites) or lagomorphs (rabbits, hares, and rodents) slaughtered on the farm to the final consumer or to local retail establishments directly supplying such meat to the final consumer⁴⁴

Which producers benefit from this exemption?

The exemption applies to producers of poultry or lagomorphs who slaughter their own animals on the farm of production, as long as only *small quantities* of meat are supplied.

The UK is interpreting 'small quantities' as:

- producers annually slaughtering under 10,000 birds or lagomorphs
- producers annually slaughtering over 10,000 birds or lagomorphs who are members of an appropriate assurance scheme and who either:
 - dry pluck by hand
 - slaughter for 40 days per year or less

The limit of 10,000 birds or lagomorphs in the first category may allow for some fluctuation in annual throughput around that level provided, it does not habitually exceed a combined limit of 10,000 a year.

Although there is no limit to the number of birds or lagomorphs that producers in the second category may slaughter, the FSA anticipates that the restrictions will limit

⁴⁴ Article 1(3)(d) of Regulation (EC) No 853/2004

production to relatively small quantities. In judging whether an assurance scheme is appropriate, it is recommended that regard be had as to whether the scheme has requirements that go beyond minimum legal requirements in relation to food safety and hygiene and whether it has independent verification arrangements. The FSA can advise in cases of doubt.

Where can the meat be sold?

Meat produced under this exemption may be supplied direct to:

- the final consumer
- direct to local retail establishments directly supplying such meat to the final consumer

In the first category, direct supply to the final consumer includes mail order or internet sales, as long as the supply is *direct* to the consumer. Such supplies are not necessarily limited to meat in the form of fresh meat. They could be in the form of meat products or preparations.

In the second category, the supply is to be direct to local retail establishments (in the form of fresh meat, meat preparations or meat products), and could include the supply by the producer to restaurants or other catering establishments. The retail establishments supplied is to be *local*. 'Local' supply is interpreted as being the same as 'localised' and, in addition, anywhere within the UK in the two weeks preceding

- Christmas
- Easter
- Michaelmas (late September) – for geese only

What rules apply?

Regulation (EC) No 852/2004 applies to producers who benefit from this exemption. This includes, among other things, the requirement to register the establishment with the local Competent Authority, to maintain procedures based on HACCP principles and to comply with general hygiene and training requirements. The national rules in schedule 5 to The Food Hygiene (Wales) Regulations 2006 regarding labelling and record keeping also apply.

The labelling rules require that the meat bear a label or other marking clearly indicating the name and address of the farm where the bird or animal was slaughtered. This is in addition to any food information required by the Regulation (EU) No 1169/2011.

Schedule 5 of the Food Hygiene (Wales) Regulation 2006 requires the producer to keep a record in adequate form to show the number of birds and the number of lagomorphs received into, and the amounts of meat despatched from, the premises during each week. Such records, in order to be adequate are to at least record this information by species of animal slaughtered. The records are also to be retained for one year and be made available to an authorised officer of the local Competent Authority on request.

8.3.4 Meat products, minced meat, and meat preparations – Cutting of meat

Premises that cut meat exclusively for the manufacture of meat products, minced meat, meat preparations or mechanically separated meat, require approval in respect of their manufacturing activities and need to comply with the relevant requirements of annex III of Regulation (EC) No 853/2004 for red or white meat cutting plants, but will not need approval as cutting plants.

8.3.5 Home slaughter of livestock

Where slaughter of a livestock animal is carried out by its owner on their property for their own personal consumption or that of immediate members of their family living there and the meat is not placed on the market (whether free of charge or not), such activity falls out of the scope of both Regulation (EC) No 852/2004 and Regulation (EC) No 853/2004. However, Regulation (EC) No 999/2001 applies wherever a Transmissible Spongiform Encephalopathies (TSE) susceptible animal is slaughtered (including home slaughter). This means that after the slaughter of cattle, sheep or goats, specified risk material (SRM) is required to be removed, stained, and disposed of in accordance with both Regulation (EC) No 999/2001 and the Animal By-Products Regulation (EC) No 1069/2009. Animal welfare regulations also apply. A more [detailed guide on home slaughter](#) is available on the FSA website.

8.3.6 Less than thoroughly cooked (LTTC) burgers

In March 2017 a specific requirement for establishments supplying minced meat and/or meat preparations intended to be eaten LTTC to be approved by either the FSA or their local authority was introduced. Specific approval of this activity is an important step in delivering a high level of public protection. A [published list of establishments approved for this activity](#) can be viewed. The list assists FBOs at catering establishments to identify approved producers of minced meat/meat preparations which are suitable for use in the production of burgers intended to be LTTC.

There is guidance for food businesses and authorised officers on '[Less than thoroughly cooked beef burgers](#)' on the FSA website.

8.3.7 Halal food guidance

[Guidance for food law enforcement officers on Halal food requirements](#) can be found on the FSA's communications platform.

8.4 Matters relating to raw milk and dairy products

8.4.1 Introduction

This section provides specific guidance to Competent Authorities, with regard to Raw Milk and Dairy Products and clarifies enforcement responsibilities between LAs and the FSA.

8.4.2 Enforcement

LAs are the responsible Competent Authority for dairy in relation to food hygiene and food standards requirements.

LAs are responsible for enforcing the sampling requirements of schedule 6 of The Food Hygiene (Wales) Regulations 2006 in respect of sales of raw drinking milk (RDM) intended for direct human consumption, from species other than cows – specifically paragraph 5 and for the health warning requirements for RDM of non-cow species under schedule 6.

LAs are also responsible for verifying compliance with hygiene requirements during bottling or packaging processes for RDM of all species for direct consumption. They are also the enforcement authority for general food information, including durability marking of RDM of all species.

Requirements in regulation 5(2)(b) of The Food Hygiene (Wales) Regulations 2006 relating to milk production holdings and the subsequent supervision and inspection of production holdings (apart from animal health checks – see below) are dealt with by the FSA Dairy Hygiene Inspectors (DHIs).

The DHIs are also responsible for controls under regulation 32 and schedule 6 of The Food Hygiene (Wales) Regulations 2006 on the sales restrictions of raw cows' drinking milk (RCDM) ensuring:

- that RCDM is only supplied from farms direct to consumers, at registered farmers markets or via distributors
- compliance with the appropriate health warning labelling requirements to be included on raw cows drinking milk (RCDM)
- the management of the sampling programme adhere to standards for such milk set down in schedule 6

The FSA is also responsible for the enforcement of schedule 6 of The Food Hygiene (Wales) Regulations 2006 with respect to RCDM for direct consumption. DHIs verify compliance with those provisions and are the relevant enforcement authority for failure to comply with:

- the schedule 6 micro parameters for RCDM
- the limitations on sales routes for RCDM for direct consumption
- the health warning requirements for RCDM under schedule 6

The FSA's [Guidance for producers of raw drinking milk for direct human consumption](#) provides details regarding the split of enforcement and official controls between the FSA and LAs.

Defra, working with APHA, is responsible for carrying out official tests of dairy cattle herds for bovine tuberculosis (TB) and brucellosis, where appropriate, including annual TB testing of cattle herds that produce RDM for direct human consumption.

FBOs whose operations are both as a milk production holding and a processing establishment are registered with the FSA as a production holding and either registered or approved by the LA as a dairy establishment for processing activities.

8.4.3 FBOs selling raw drinking milk and cream intended for direct human consumption

There are no similar restrictions on sales routes of RDM from other species though the product is still required to comply with the food safety and traceability requirements set out in articles 14 and 18 of Regulation (EC) No 178/2002.

All RDM for direct consumption is also required to comply with the food safety criteria under Commission Regulation (EC) No 2073/2005 with respect to ready to eat foods and the legal safety and traceability requirements for food.

If LAs have concerns about the microbiological standard of RCDM either at the bottling stage or when it is offered for sale (such as via a milk round or in a farm shop), they can carry out their own testing for specific pathogens and take action under the Food Safety Act 1990, if appropriate. It is recommended that close collaboration be maintained with the local DHI in these circumstances.

LAs are requested to alert the FSA, via email to dairyops@food.gov.uk, as soon as possible if they become aware of sales of RCDM other than from the farm, registered farmers markets or via a distributor as permitted under the food hygiene regulations, or if they are alerted of failed microbiological samples results taken from RDM.

Cattle herds that produce RDM for direct human consumption or the production of raw dairy products are required to be officially TB free and subject to annual testing for TB. Therefore, it is essential that LAs liaise closely with the FSA and the regional APHA offices to maintain an up-to-date list of local FBOs selling RDM and raw milk products.

8.4.4 Reusable containers

The cleaning and disinfection of reusable containers mechanically can be difficult to comply with, particularly for some smaller establishments. Dairies that obtain clean bottles from central units will not normally require mechanical bottle washing facilities, providing the clean bottles are not exposed to any risk of contamination during storage and before being filled at the dairy. Bottle washing and storage can take place in the same room where products are handled, but at different times or in a separate area, providing hygiene is not compromised.

8.4.5 Health requirements for raw milk production

FBOs are responsible for ensuring that the requirements of annex III, section IX, chapter 1, part 1 of Regulation (EC) No 853/2004, are met through private veterinary inspections at regular intervals⁴⁵. The frequency of such inspections will be dependent on the individual circumstances. Such inspections can take place when a farmer's private veterinary surgeon is present for other purposes. FBOs will need to keep evidence of such visits, for example, a receipt/invoice, and of any follow-up action taken if problems occur for checking by authorised officers. First purchasers of raw milk are also required to ensure, for example, through contracts, that checks

⁴⁵ Article 49 of Commission Implementing Regulation (EU) 2019/627

have been carried out to assess compliance with relevant animal health standards. Immediate problems that may affect the safety of milk will normally be notified to LAs by the FSA, APHA or private veterinary surgeons. Longer-term issues arising from records can also be referred to LAs. Where LAs suspect that requirements are not being complied with, or that follow up action has not been taken, they are to raise the matter with the first commercial purchaser/processor, or with the producer direct, and advise them to take appropriate advice, for example, from their private veterinary surgeon. LAs are advised to also inform the FSA so that DHIs can take action as a result of the referral or complaint.

8.4.6 Criteria and standards for raw milk

In the case of the standards laid down in annex III, section IX, chapter I, part 3 of Regulation (EC) No 853/2004 for plate counts and somatic cell counts, the regulations specify a minimum frequency of sampling by the producer or the first commercial purchaser. Authorised officers need to ensure that FBOs are carrying out the specified sampling programme. Authorised officers can check FBOs' records, and if they have concerns about the test results, consider random official checks to satisfy themselves that the required standards are being met.

8.4.7 Temperature requirements for milk used for the manufacture of dairy products

Annex III, section IX, chapter II, part 1, paragraph 1 of Regulation (EC) No 853/2004 stipulates that the acceptability of raw milk applies from the arrival of the milk at a processing establishment.

8.4.8 Heat treatment of raw milk or dairy products

Requirements for pasteurisation and ultra-heat treatment are set out in annex III, section IX, chapter II of Regulation (EC) No 853/2004.

Paragraph 2 allows temperatures and times specified for treatment of raw milk to be exceeded for 'technological' reasons. These reasons will include cases where higher temperatures may be essential to the manufacture of certain products, for example, cheeses and instances over a weekend when establishments are unable to process milk within the specified period. Authorisation by the LA is required whenever it is anticipated that these times will be exceeded.

8.4.9 Phosphatase testing

Requirements for the determination of alkaline phosphatase activity in pasteurised cow's milk is set out in annex III, chapter II, of Commission Implementing Regulation (EU) 2019/627.

8.4.10 Labelling of cheeses made from raw milk

Cheeses made from raw milk which are sold pre-packaged are required to be labelled on the packaging as being 'made with raw milk' at point of sale. The legislation provides that 'labelling' includes any packaging, document, notice, label, ring, or collar accompanying or referring to such products.

Blocks of cheese on display at a delicatessen counter which it is intended will be cut into smaller portions for sale to the consumer are required to be labelled as 'made with raw milk' either by a label on the cheese or by a notice referring to it. However, such cheese once it is cut and wrapped and given to the consumer for purchase does not require to be labelled with the prescribed wording.

8.4.11 Officially tuberculosis free status and dairy hygiene legislation

8.4.11.1 Scope

This section provides information and advice for Competent Authorities who have dairy herds and/or dairy establishments in their area, including those producing RCDM (which in this context also includes raw buffalo's milk) and/or unpasteurised milk-based products. The guidance will be of assistance to those involved in follow-up actions following notification from APHA of the loss of 'Officially Tuberculosis Free' (OTF) status of dairy herds.

For the purpose of the Practice Guidance and for the purposes of dairy hygiene legislation, the herd will have lost OTF status if:

- a reactor is disclosed by tuberculin testing
- suspect lesions of TB are identified at routine post-mortem meat inspection (slaughterhouse cases)
- inconclusive reactors are disclosed within three years of a previous confirmed TB incident in the same herd
- a tuberculin skin test has become overdue (status suspended - (OTFS)); or when *M. bovis* infection is confirmed in a herd by post-mortem examination and/or bacteriological culture (status withdrawn (OTFW))

8.4.11.2 Introduction

TB is an infectious disease of humans and many animal species, caused by bacteria of the genus *Mycobacterium*. Most cases of human tuberculosis are caused by *Mycobacterium tuberculosis* (*M. tuberculosis*). TB in cattle is primarily caused by *Mycobacterium bovis* (*M. bovis*), which unlike *M. tuberculosis* has a very broad host range. APHA is responsible for carrying out surveillance testing of dairy cattle herds for bovine tuberculosis (and brucellosis where appropriate) on a disease risk basis.

8.4.11.3 Competent Authority enforcement issues

Action to take on loss of OTF status of a dairy herd

When a dairy herd is placed under TB movement restrictions, for whatever reason, APHA will send a notification to the herd owner (FBO), FSA and relevant LA officer. TB restrictions are imposed on the herd owner under The Tuberculosis (Wales) Order 2010 and this effectively suspends (or withdraws) the OTF status of that herd until further notice.

On receipt of the notification, the FSA commences the process to ensure that milk from the herd is no longer used for raw milk-based products. The FSA liaises with the TB Advice team at APHA to establish the circumstances of the case and the OTF status of the herd.

The Notice served by APHA on the FBO advises that the FSA is the Competent Authority for the enforcement of Regulation (EC) No 853/2004 at 'registered' primary production holdings in Wales and LAs act as the Competent Authority at 'approved' dairy processing establishments, collection centres, re-wrapping, and repackaging centres.

The Notice includes the following information:

- milk from reactors is not to be used for human consumption. Milk from these animals is to be withheld from the bulk tank. It is recommended that the FBO does not feed it to calves or other livestock on the holding. If fed, reactor milk may only be given to animals on the same farm, after suitable heat treatment
- milk from animals (from a reactor herd) that do not show a positive reaction to the test for TB is required to be heat treated before being sold for human consumption. The FBO or person in charge at the primary production holding is required to contact their milk purchaser to ensure that all milk undergoes heat treatment
- FBOs with an additional registration in Wales and England who sell raw milk for direct human consumption are required to cease such sales. If raw milk is to be used by the FBO of the primary production holding as an ingredient to make cream or cheese, the FBO is to ensure that such milk is heat treated before use
- milk from inconclusive reactors may still go for human consumption, provided it is heat treated before it is sold, as detailed in bullet point 2 above

Processors making raw milk-based products are not to use milk from the affected herd and will only be able to continue their production of such products by obtaining an alternative source of supply from an OTF herd.

On receipt of notification LAs are recommended to:

- contact the first purchaser(s) of the milk to establish that they are aware of the herd breakdown and that the milk from the non-reactor animals will be heat treated before sale or use in dairy products
- confirm the cleaning in place systems (CIP) for the means of transport

These investigations can be facilitated by contacting the regional APHA office responsible for managing the TB breakdown, the DHIs and any other LAs, including the LA of the first purchaser who might need to become involved where appropriate.

Where the affected farm has heat treatment facilities installed, additional official controls, beyond those already being conducted, are to be carried out at the LAs discretion on a risk basis to confirm that all HACCP systems and procedures are in place and working effectively, including adequate heat treatment.

LAs are to notify the [FSA Incidents Team](#) immediately if:

- milk from reactor animals is found to have entered the food chain after the loss of OTF status
- milk from the non-reactor animals in a non-OTF herd is found to have entered the food chain without heat treatment

Action to be taken on stocks of raw milk-based products following loss of OTF status

Authorised officers of LAs will wish to consider the public health implications of products made prior to the herd losing its OTF status, via a risk assessment undertaken locally with the CCDC, the regional APHA office and the DHIs. It is recommended that advice also be obtained, where appropriate, from the PHW. If, as a result of the risk assessment, it is concluded that it is appropriate to withdraw or destroy such products, (voluntary) withdrawal/destruction procedures could be pursued. Authorised officers will have to decide on appropriate action based on the circumstances of individual cases

Factors to be taken into account in the risk assessment will include:

- the reasons for the loss of OTF status. This can be due to the disclosure of TB test reactors, inconclusive reactors only, a slaughterhouse case, or an overdue TB test
- number of reactors identified. This would be the number of reactors in relation to the total herd size and number of cattle tested. A single or a low number of reactors in a large herd may represent a lower risk, since it may indicate that the infection has not had time to spread within the herd. A large number of reactors in any herd could indicate either a long term spread within the herd or multiple infections linked to a common source. Herds with larger number of reactors at the initial test are more likely to have additional reactors disclosed at the next test
- types of cattle reacting to the test. For example, maiden non calved heifers or bullocks being non-milk-producing animals would be of less significance
- the number and location of any lesions found at post-mortem examination (PME) and tissue culture results. If no TB lesions are found, or lesions are confined to one organ or one part of the body other than the mammary gland, the risk of TB bacilli being present in milk would be considered low. If TB lesions were found in the mammary gland or in more than one organ or part of the body in a lactating dairy cow, the risk of TB bacilli being present in milk would be considered significant. TB bacilli may be present in milk even in the absence of obvious udder disease when the disease has been distributed systemically. Following PME tissue samples are collected from a small subset of reactors, including those where no visible lesions were found in the absence of lesioned cattle. Tissue culture takes a minimum of 6 weeks to positively identify *M. bovis*, with approximately 10% of reactors with no visible lesions at PME and >90% of lesion reactors yielding a positive culture of *M. bovis*
- testing history of the individual herd. Aspects to consider include:
 - time elapsed since the last clear TB test
 - previous TB history of the herd
 - the reason for the test.
- the baseline testing frequency for the civil parish. This provides an indication of whether the herd is in a high TB prevalence area. The APHA case

veterinary officer will provide expert opinion and judgement of the TB incidence in the locality

- general herd health and herd bio-security. Consideration should also be given to:
 - milk somatic cell counts - higher cell counts may indicate a higher likelihood of TB organisms being present in the milk
 - animal trading record for the farm, highlighting numbers brought in, from where and their last TB test date (this is important because it can take a minimum of 6 weeks from the time of infection for an animal to react to the tuberculin test)
- type(s) of milk-based product and production process. For example, the use of bought in milk may make it more difficult to establish the necessary herd information. Consideration should be given to any scientific evidence, including that provided by the milk processors, that the production process may eliminate the pathogens and that TB organisms are absent from the product
- fresh milk products. The shelf life of the product may have been exceeded by the time the post-mortem report or tissue culture results are received
- size of the TB restricted herd. The likelihood, severity and duration of TB incidents tends to increase as herd size increases. Although this trend has been identified the affect is difficult to quantify and therefore the other factors detailed above are of greater significance for the risk assessment

Where there is evidence of active disease in an animal, it is likely that withdrawal of batches of the product produced before the date of TB testing would be appropriate as a precaution. The case Veterinary Officer dealing with the TB incident is often the person best placed to provide information and assist the Competent Authority with the risk assessment

Regulation (EC) No 853/2004 does not prohibit the marketing of products manufactured before the removal of OTF status. If a voluntary solution cannot be agreed with the producer, authorised officers may consider enforcement action if they suspect that the products concerned fail to comply with food safety requirements as defined in article 14 of Regulation (EC) No 178/2002.

Action to take before OTF problems arise

The FSA liaises with APHA to ensure that herds supplying RCDM and/or establishments or processors manufacturing unpasteurised dairy products are tuberculin tested annually. The FSA notifies APHA when they become aware of the sale of RCDM for human consumption. It is recommended that Competent Authorities advise manufacturers producing unpasteurised dairy products that the law requires that the milk they use may only come from herds classified as OTF. Authorised officers are to verify that those processors who buy in milk are able to produce evidence the milk they purchase only comes from OTF dairy herds that are tested annually for TB. LAs can contact APHA who will be able to supply further information about these issues

LAs may find it helpful to liaise with relevant Competent Authority Animal Health and Welfare Trading Standards Inspectors, as their responsibilities include checking farm records under animal health legislation.

8.4.11.4 CCDC notification to Competent Authority of person with confirmed bovine TB

In the event of a CCDC being notified that a person has confirmed bovine TB, and the infection is thought to be recently acquired, the CCDC will look to ascertain any connection with cattle that indicates the infection might have been caught from an animal source or might be passed to animals. If so, they will inform the Competent Authority. If there is a risk that a herd and/or other farm stock might be infected, the authorised officer is to notify APHA so that checks can be made on the herds. It may also be appropriate to notify other relevant Competent Authorities, local farmers, dairies and producers, milk buyers or distributors that might be affected (with due regard for patient confidentiality). For detailed guidance on dealing with human cases of TB, contact the Department of Health and Social Care (DHSC) or consult the relevant [Bovine tuberculosis \(TB\): public health management guidance](#).

8.4.11.5 Further contacts and information

If further advice is needed on the action to be taken on stocks of raw milk-based products following the loss of OTF status, Competent Authorities can contact the [Wales Food Incidents Team](#), who will work with the local investigation team.

If more information is required on Defra procedures concerning TB controls, Competent Authorities can contact the duty Veterinary Officer at local or regional Offices of APHA.

The following websites may be useful:

- [Animal Plant and Health Agency](#)
- [Bovine TB information notes](#)
- [Tuberculosis \(TB\): diagnosis, screening, management, and data](#)

8.5 Matters relating to egg packing centres

8.5.1 Introduction

This section provides specific guidance to Competent Authorities for the enforcement of annex III, section X, chapters I and II of Regulation (EC) No 853/2004.

In addition to the relevant requirements of Regulation (EC) No 852/2004, this part of the aforementioned regulations lay down requirements for egg packing centres covering:

- hygiene and temperature requirements for the storage and transport of eggs
- the maximum time limit in which eggs are to be delivered to the consumer

8.5.2 Scope of the regulations

The regulations apply to establishments engaged in the following activities:

- egg packing centres – the grading, packing, handling, and storage of eggs

- wholesalers and retailers – the handling and storage of eggs

The production and collection of eggs at the producer's establishment are activities that take place at the primary production level.

Under the terms of the hygiene legislation, egg packing centres are not classed as primary producers, as they are engaged in activities one step removed from primary production. Therefore, in addition to the specific egg hygiene provisions contained in Regulation (EC) No 853/2004, egg-packing centres will be subject to the appropriate provisions of Regulation (EC) No 852/2004, including the article 5 HACCP requirements and the relevant chapters of annex II.

Egg packing centres will generally receive eggs from primary production units. From the packing centre, eggs will be distributed throughout the food distribution chain to wholesalers, retailers and the catering trade. Packing centres may be located on the same site as the production holding, but they might also be sourcing eggs from a number of different production sites and may even take bulk supplies of eggs from the wholesale market and repackage them into smaller containers. These practices are acceptable; however, Competent Authorities are to verify that egg packing centres comply with the relevant requirements of the food hygiene regulations and general food law.

Egg wholesalers, while subject to the requirements of annex III, section X, chapter 1 of Regulation (EC) No 853/2004, may be classed as 'retail' as defined in article 3(7) of Regulation (EC) No 178/2002 and included in the retail exemption. However, if a wholesaler also carries out egg packing, then approval is required for the area of the establishments involved in packing eggs.

8.5.3 Specific hygiene requirements for shell eggs

The specific requirements set out in the regulations are:

- at the producer's establishment, and until sale to the consumer, eggs are to be kept clean, dry, free of extraneous odour, effectively protected from shocks and out of direct sunshine
- eggs are to be stored and transported at a temperature, preferably constant, that is best suited to assure optimal conservation of their hygiene properties
- eggs are to be delivered to the consumer within a maximum time limit of 21 days of laying

These specific requirements are self-explanatory save for the requirement to deliver eggs to the final consumer within 21 days from laying. It is not possible to determine the age of an egg directly and, any legal requirement to provide the date of lay or the age of an egg is covered in egg marketing legislation. Eggs might be stamped with 'best before dates'. In the case of Class A eggs, it is a legal requirement⁴⁶ for a 'best before date' to be applied on all labels/packs. Given this information, if an authorised officer suspects eggs are being sold beyond the time limit required on food safety

⁴⁶ Articles 12 and 13 of Commission Regulation (EC) No 589/2008

grounds, they are to examine documentation from the egg producer to determine the age of an egg. It is recommended that the authorised officer also contact the relevant Egg Marketing Inspector (EMI) for further guidance and help in taking the appropriate action.

The Eggs and Chicks (Wales) Regulations 2010 cover most aspects of egg production, marking, transport, grading, packing and onward marketing.

The Registration of Establishments (Laying Hens) (Wales) Regulations 2004 require all laying hen establishments with 350 or more laying hens - whether from caged, barn, free range or organic egg-producing hens - to be registered with the APHA for egg marketing purposes. These regulations only relate to *Gallus gallus* hens. The FSA is the Competent Authority responsible for food hygiene registration and official controls in these establishments. However, APHA deliver these official controls on behalf of the FSA. This is in addition to the requirements laid down in Regulation (EC) No 852/2004 and Regulation (EC) No 853/2004 regarding registrations and approvals.

Producers are required to also register with APHA if:

- they have 50 or more hens and any of the eggs are marketed at a local public market
- any of the eggs are marketed to registered packing centres

Note: If the eggs are supplied to shops, restaurants or bakeries, the producer will need to be approved and authorised as a packing centre by EMI in order to be permitted to grade them as Class A eggs.

All egg laying establishments that are registered with APHA are allocated with a distinguishing number that is required to be stamped on all eggs graded as Class A.

8.5.4 Egg marketing

Egg producers, packing stations and wholesalers are also subject to [egg quality and marketing regulations](#). These regulations are the responsibility of Defra. Inspections under these regulations are carried out by EMIs. It is recommended that authorised officers liaise with their respective EMI prior to inspecting egg packing stations and wholesalers.

8.6 Matters relating to egg products and liquid egg

8.6.1 Introduction

This section provides specific guidance to Competent Authorities on the enforcement of annex III, section X, chapter II of Regulation (EC) No 853/2004. This lays down the public health rules for the manufacture and placing on the market of egg products and liquid egg for human consumption.

The regulations lay down requirements for:

- establishments
- raw materials for the manufacture of egg products
- special hygiene requirements for the manufacture of egg products

- analytical specifications
- labelling and identification marking

8.6.2 Scope of the regulations

The regulations apply to establishments manufacturing egg products and liquid egg for human consumption, which include food businesses involved in the production of:

- processed products resulting from the processing of eggs, or various components or mixtures of eggs, or from the further processing of such processed products
- liquid egg for onward transportation to approved processing establishments

All establishments need to be approved if the regulations apply to them.

None of the requirements in annex III, section X, chapter II of Regulation (EC) No 853/2004 apply to retail, as defined by Regulation (EC) No 178/2002, so establishments such as bakers and caterers that process eggs and supply to the final consumer are not subject to any of the requirements of Regulation (EC) No 853/2004. However, there is a requirement under Defra marketing legislation for caterers to only use Class A eggs, so eggs have to come from an approved egg packing establishment which meets the requirements in Regulation (EC) No 853/2004.

8.6.3 Types of approved premises

Premises requiring approval fall into two categories:

- i) premises where egg products are manufactured and placed on the market, for example, where processing of raw eggs takes place
- ii) premises where liquid egg is produced for later processing by an approved egg product manufacturer

Category (ii) exists because egg packing centres might prefer to break out eggs, including cracked eggs, to produce liquid egg rather than risk breakage before they are sent to a processing establishment described in category (i). Such approvals must require that the eggs are broken out as soon as possible, in accordance with the FBO's HACCP-based procedures and the resulting liquid egg frozen or chilled for transport to another approved establishment. If chilled, the storage temperature must not exceed 4°C and the storage period before processing must not exceed 48 hours. Any establishment approved for category (ii) only, must comply with the same requirements for approval as egg product manufacturers in category (i). When notifying the FSA of approvals, the Authority should specify whether the approval is for (i) or (ii) and if the establishment is also a packing centre.

8.6.4 Dirty eggs

Eggs cannot be broken out unless they are clean and dry. Dirty eggs (non-Class A eggs) may be cleaned, but LAs are to ensure that any washing, drying and disinfecting of eggs is separated from all other operations of the business.

8.6.5 Centrifuging or crushing

The regulations prohibit the use of centrifuges or crushing to obtain egg contents or obtain egg whites from shells for human consumption. However, centrifuges can be used for the disposal of waste, and in such cases, the centrifuge is to be situated completely separately from other operations of the approved establishment. Authorised officers are to satisfy themselves that centrifuged material cannot contaminate egg products intended for human consumption. Waste material is to be denatured upon entry to the centrifuge, for example, by use of a dye.

8.6.6 Labelling requirements

The general requirements for identification marking laid down in annex II, section I of Regulation (EC) No 853/2004 are to be complied with and are set out in 2.7.3 of the Code. However, there are additional specific requirements for egg products. Annex III, section X, chapter II, part V of Regulation (EC) No 853/2004 requires that consignments of egg products to be used as an ingredient in the manufacture of another product are to have a label giving the temperature at which the egg products are to be maintained and the period during which conservation may thus be assured. If the egg in question is liquid egg, then the label is to also state the words 'non-pasteurised liquid egg - to be treated at place of destination' and indicate the date and hour of breaking.

8.6.7 Pasteurisation and heat treatment

The regulations do not prescribe a time/temperature combination for the heat treatment of eggs, but they do require that the process eliminate microbiological hazards or reduce them to an acceptable level. Processing is not required for egg white intended for the manufacture of dried or crystallised albumen destined subsequently to undergo heat treatment.

Competent Authorities will need to be satisfied that the heat treatment process is sufficient to ensure a reduction in the level of micro-organisms in the egg product to any levels laid down in UK legislation on microbiological criteria.

Where a non-standard process is proposed, the onus is on the food business to show that adequate research has been carried out into its effectiveness. In establishments where heat processing takes place, Competent Authorities need to establish that the operator of the heat process has an acceptable and appropriate level of expertise.

8.6.8 Analytical specifications

Annex III, section X, chapter II, part IV of Regulation (EC) No 853/2004 lays down analytical specifications that the end-product is not to exceed. Although there are no prescribed methods for testing for lactic or butyric acids, methods do exist. Where such methods are used, consideration is to be given to the reliability of the results. Where samples are tested, the results are to be compared with the standards specified.

Authorised officers can help food businesses develop sampling plans which are not prescribed in the regulations.

8.6.9 Temperature control

The regulations require that products that have not been stabilised so as to be kept at room temperature, are to be cooled to not more than 4°C. Products for freezing are to be frozen immediately after processing.

8.6.10 Storage and transport

It is recommended that establishments keep eggs and egg products separate to avoid contamination. If separate rooms are not available, egg products may be stored in separate containers and areas.

Storage rooms are to be capable of maintaining any required temperature controls.

The regulations do not cover egg products that are stored in separate establishments such as depots or warehouses outside approved egg products establishments. Such storage is covered by Regulation (EC) No 852/2004.

8.7 Small quantities

8.7.1 Small quantities of primary products

Producers of small quantities of primary products, that are being supplied direct to the final consumer or local retail establishments directly supplying the final consumer, are exempt from legislative requirements in accordance with Article 1(2) of assimilated Regulation (EC) No 852/2004 and Article 1(3) of assimilated Regulation (EC) No 853/2004. These producers remain responsible for supplying safe food under The Food Safety Act 1990 and Regulation (EC) No 178/2002.

In general terms, the notion of small quantities is broad enough to allow amongst other things:

- farmers to sell primary products directly to the final consumer, for example, farm gate sales or sales at local markets. This exemption also covers sales to local retail shops and local restaurants directly supplying the final consumer with the exception of RDM and eggs (see below)
- fishermen who harvest live shellfish products and fishery products such as crabs and lobsters to deliver directly to the final consumer or to local retail shops and local restaurants for direct sale to the final consumer

The expression small quantities is not defined in the regulations - the FSA therefore suggest the following in Table 6 as maximum amounts, which could be considered as a small quantity for individual POAO.

Table 6 – Table indicating small quantities of POAO

Products	Maximum amounts
Milk	Up to 24 pints of raw drinking milk per day (approximately 14 litres)

Eggs	<p>Less than 360 eggs (that is less than one full case) per week</p> <p>Note: This exemption only applies to the producer supplying directly to the final consumer from the farm and farmers' markets and door-to-door. If the producer sells the eggs, for example, to local shops, restaurants or bakeries, they must first be graded as Class A; and therefore, the premises is required to also be approved and authorised as a packing centre for that activity.</p>
Fishery products	Up to 25 tonnes in a calendar year
LBMs and marine gastropods	<p>Collectively, up to 25 tonnes in a calendar year, but subject to maximum limits for individual species as set out below:</p> <p>Cockles - 25 tonnes</p> <p>Oysters - 5 tonnes</p> <p>King scallops - 5 tonnes</p> <p>Queen scallops - 10 tonnes</p> <p>Mussels - 20 tonnes</p> <p>All other LBMs - 10 tonnes</p> <p>Marine gastropods - 20 tonnes</p>

8.8 Food for specific groups

8.8.1 Guidance

Regulation (EU) No 609/2013 establishes compositional and information requirements on food for specific groups, which include:

- infant formula and follow-on formula
- processed cereal-based foods and baby foods
- food for special medical purposes
- foods for total diet replacement for weight control

The DHSC have produced an [information sheet](#) on this legislation.

Specific guidance is also available on Commission Delegated Regulation (EU) 2016/127 regarding [infant formula and follow-on formula](#)

8.9 Temperature control provisions

8.9.1 Introduction

Temperature control requirements for food in the UK are set out in annex II, chapter IX, paragraphs (5) and (6) of Regulation (EC) No 852/2004. These requirements are given effect by regulation 30 and schedule 4 of The Food Hygiene (Wales) Regulations 2006.

Regulation 30 and schedule 4 do not apply in respect of any operation to which Regulation (EC) No 853/2004 applies.

In respect of circumstances exempted from the requirements of regulation 30 and schedule 4, and where food is required to be kept under temperature control for safety reasons, the general requirements of annex II of Regulation (EC) No 852/2004, would still apply, as appropriate, which include:

- chapter I, paragraph 2 (d)
- chapter III, paragraph 2(g)
- chapter IV, paragraph 7
- chapter V, paragraph (2)
- chapter IX, paragraphs (2), (5), (6) and (7)

8.9.2 General approach to temperature checks

Schedule 4 does not apply to any food business operation on ships and aircraft. Where applicable, the schedule requires certain types of perishable food to be maintained within specified temperature ranges. The purpose of checking the temperature of such foods for enforcement purposes is to establish whether these requirements are being met, taking account of any exemptions or tolerances that might apply.

Where appropriate, regard is to be given to any relevant temperature requirements of annex II of Regulation (EC) No 852/2004.

It is recommended that authorised officers adopt a staged approach to verifying compliance with the temperature requirements of the regulations as follows:

Stage 1 - Air temperature monitoring

Air temperature monitoring provides an indication of the performance of a refrigeration system over time and a single reading at any one time will not necessarily be an indication of product temperature. Air temperature monitoring records are an indication of temperature history, including defrost cycles, door openings and breakdowns. They are to be regarded as a guide to how a particular system is functioning.

Stage 2 – Between-pack testing

Non-destructive temperature measurement, or between-pack testing, can be used as the next step in the enforcement process. This is done with a pre-cooled flat-headed probe, suitable for measuring surface or between-pack temperatures.

It is important to ensure good thermal contact between the product and the probe when taking between-pack measurements. A total tolerance of $+2.8^{\circ}\text{C}$ (0.8°C as

specified for instrument accuracy and 2°C for the limitation of the methodology) can be allowed. Care is to be taken to allow time for the reading to stabilise, and to ensure that the temperature reading relates to the product, not the surrounding air, which can happen if the probe is not properly sandwiched between the packs. Testing is to be conducted with the minimum of disturbance to the product or its temperature-controlled environment, particularly the airflow patterns in retail display cabinets. For products within an outer casing, it will be necessary to open the casing and insert the temperature probe between packs.

Not all packs or packaging materials are suitable for between-pack testing. Irregularly shaped packs where good thermal contact is not possible, packaging materials that act as an insulator and products in cartons or bubble packs where large air spaces exist are all examples where a between-pack temperature measurement may not be sufficiently accurate to give an indication of product temperature. In such instances it may be necessary to proceed directly to product temperature measurement.

Stage 3 - Product testing (destructive)

If a 'stage 2' temperature measurement has not been possible, or there is reasonable doubt after a 'stage 2' test about compliance with temperature requirements, it will be necessary to progress to product testing.

Sample preparation and temperature measurement can be undertaken with the sample in its temperature-controlled environment. If this is not possible, the sample can be removed to an appropriately refrigerated environment, provided the transfer does not prejudice product temperature. Any transfer is to take place prior to preparation of the sample. Transfer of products within the normal cold chain, for example, from a vehicle to a cold store, is acceptable.

When a 'stage 3' measurement is being carried out, insertion of the temperature probe into the food might render the food unsaleable. In such circumstances, the authorised officer is to consider purchasing the food in question.

The selection of items to be tested is at the discretion of the officer. However, if 'stage 2' testing has been carried out and there appears to be a breach of the relevant temperature requirements, it is not necessary to select large numbers of items for 'stage 3' testing.

In the first instance, items are to be taken for 'stage 3' testing from the warmest part of the refrigeration system. This can usually be identified using thermochromic (liquid crystal) strip temperature indicators. Although these do not give an accurate temperature reading, they can provide a useful guide to relative temperature distribution within a refrigeration system.

General approach

If an authorised officer is satisfied after 'stage 1' or 'stage 2' that the relevant temperature requirements are being met, there is no need to move to the next stage or take any further action.

If there is no temperature monitoring system, or the officer has reasonable doubt about the information derived from the system where there is one, it is recommended that the officer carry out a 'stage 2' check.

If the temperature measured at 'stage 2' gives the authorised officer reasonable doubt that the relevant temperature requirements are being met, it is recommended that the officer move on to 'stage 3' and measure the temperature of the food itself.

'Stage 3' product testing methods are recommended to be used to produce evidence for formal enforcement action.

It is recommended that the FBO or manager, if present, be invited to witness temperature measurement. This is especially important when evidence is being gathered with a view to possible formal enforcement action.

8.9.3 Taking temperature measurements

The temperature of a product is not to be prejudiced by, for example, opening the doors in a vehicle too often or for too long, disturbing the air curtain in a chill cabinet or removing the food from a refrigerated environment for long periods.

Any opened cases or cartons are to be re-sealed and appropriately labelled or marked with the date and time of the inspection, the name of the person who opened it and the name of the Competent Authority. This is to show that the case or carton was opened for an official control and removes any suspicion of malicious tampering.

8.9.4 Tolerances

'Stage 2' temperature readings might be up to 2°C warmer than the true product temperature, especially product with thick packaging. They might also be affected by recent movement of goods, defrost cycles or instrumental inaccuracy as described below.

Authorised officers are to use professional judgement in borderline cases to decide whether further 'stage 2' measurements are necessary before proceeding to 'stage 3'.

8.9.5 Checking and calibration of enforcement measuring thermometers

Thermometers and other temperature measuring devices used for official controls and/or enforcement purposes are to be periodically tested and calibrated by a suitably accredited tester, for example, the instrument manufacturer or a United Kingdom Accreditation Service accredited laboratory or testing house, in accordance with any recommendations of the manufacturer or supplier to ensure accuracy, integrity and reliability. A certificate of such calibration is to be obtained.

Competent Authorities are to also check devices for accuracy at regular intervals between each calibration, for example, against a reference thermometer used only for that purpose, to ensure they remain within relevant tolerances. Details of such checks are to be recorded and these records retained in line with Competent Authority retention policies.

It is recommended that Competent Authorities ensure that temperature measurements used in evidence are taken with a thermometer or other measuring device that has a current certificate of calibration.

The accuracy of the thermometer or other temperature measuring device, and any detachable probes, are to be checked against a reference thermometer or calibrator that is certified to an appropriate standard for example, National Physical Laboratory, and the result recorded before and after taking any temperature measurements that are likely to result in enforcement action.

The record of such a check is to be referenced to the instrument's certificate of calibration and include serial numbers of the instrument and any interchangeable probes.

If a reference thermometer is not available, the sensor can be checked in a wet ice mixture. In this case, the system is calibrated at 0°C. The temperature of wet ice from distilled water is 0°C. Drinking water with a salt content of 0.1% will only depress the melting point to -0.06°C. Therefore, in most cases drinking water can be used to make the ice for the checking procedure. Ice is to be broken up into very small pieces, packed into a wide-necked vacuum flask, wetted with cold water and stirred. The sensor is to be placed at the centre of the flask at a depth of at least 5cm, agitated frequently and the temperature read after three minutes when stabilised. The read-out instrument can be checked separately using calibration attachments at two or three different temperatures. The combination of checking the system at 0°C with that of checking the instrument is to ensure accuracy at higher temperatures.

8.9.6 Pre-cooling of instruments

The thermometer or other temperature measuring device and the penetration probe are to be pre-cooled before being used to measure product temperature to ensure that instruments are as close as possible to the temperature of the product being measured. Pre-cooling reduces the likelihood of a rise in product temperature due to the temperature of the probe and the action of making the hole and can usually be done by leaving the instruments and probe in the same temperature-controlled environment as the sample for about 10 minutes. Provided there is no significant rise in the temperature of the instrument or probe, subsequent measurements can be made after a much shorter pre-cooling period.

8.9.7 Preparation of samples for temperature measurement

Only temperature measuring probes that are specifically designed for the purpose are to be used to make a hole in the product. If the probe is not designed for this purpose, a separate pre-cooled product penetration implement is to be used. The diameter of the hole is to provide a close fit to that of the probe and its depth will depend on the type of product being tested (as described below).

8.9.8 Measurement of product temperature

Preparation of the product for testing and its temperature measurement is to take place with the product in its temperature-controlled environment. Measurement is as follows:

- where the product dimensions allow, insert the pre-cooled probe to a depth of at least 2.5 cm from the nearest outside surface of the product
- where it is not possible, the probe is to be inserted to a minimum depth from the surface of at least 3 times the diameter of the probe. With some products, because of their small size, it is recommended that greater care be taken to avoid excessive rises in product temperature from unnecessary handling of the sample

Certain foods, because of their size or composition, cannot be penetrated satisfactorily to determine their internal temperature. In these cases, the internal temperature of the food package is to be determined by insertion of a suitable pre-cooled sharp-stemmed probe to the centre of the pack to measure the temperature in contact with the food.

It may not always be possible to determine the internal product temperature accurately, especially of fragile or open-textured products. The temperature of such products is to be measured by carefully removing the product from its packaging and firmly sandwiching a pre-cooled flat-headed probe between two items of product.

The temperature reading is not to be recorded until it has stabilised.

8.9.9 Equipment used for chilled product temperature measurement

Temperature measurement systems that are used for enforcement purposes are to meet the following requirements - the:

- system is to reach 90% of its final reading within 3 minutes
- system is to have an accuracy of +/-0.5°C, or better when the sensor is measuring within the temperature range -20°C to +30°C
- accuracy does not change by more than +/-0.3°C when the instrument is operated in temperatures of -20°C to +30°C
- instrument display is to be readable to at least 0.1°C
- system is to be robust and shock proof
- temperature sensitive part of the system is to be constructed to facilitate good thermal contact with the food and be easily cleaned

A dry cell battery, not mains electricity, is to power the measuring instrument. The instrument is to incorporate a method of checking the battery voltage to indicate when replacement or re-charging is necessary. The design of the probe depends on the type of temperature measurement:

- for product tests: a robust rigid stem with a sharpened point suitable for insertion into the product and capable of being sterilised.
- for between-pack tests: a flat head suitable for a between-pack measurement with good surface contact, low thermal mass and high thermal conductivity. If

a suitable flat probe is not available, one can be constructed using a calibrated sensor crimped in the centre of a square (approximately 4cm long), or circle (approximately 4cm diameter) or a double layer of aluminium foil. Any inter-connecting cables are to be flexible between 0°C and +30°C.

8.9.10 Food that is warmer than prescribed chill holding temperature

When measuring the temperature of food itself, authorised officers are to be aware that the regulations allow the temperature of a food subject to chill holding temperatures, whilst it is for service or on display for sale, to rise above 8°C for one period only of less than four hours⁴⁷.

The officer is to be satisfied that the FBO has measures in place, as appropriate, to ensure that the chill holding tolerance described above is not exceeded.

8.9.11 Food that is cooler than prescribed hot holding temperature

When measuring the temperature of food itself, authorised officers are to be aware that the regulations allow the temperature of a food subject to hot holding temperatures, whilst it is for service or on display for sale, to fall below 63°C for one period only of less than 2 hours⁴⁸.

The officer is to be satisfied that the FBO has measures in place, as appropriate, to ensure that the hot holding tolerance described above is not exceeded.

8.9.12 Temperature deviations

Where the FBO suggests that specified temperatures have not been complied with⁴⁹ for unavoidable reasons, the authorised officer is to discuss the reasons with the FBO and, where possible, seek agreement on action to prevent any recurrence.

Authorised officers are to always ensure that any measures taken by the FBO with respect to food that has been exposed to temperatures in excess of, or below, those permitted by the regulations are consistent with food safety and take appropriate action to remove such food from the food chain if necessary.

If the food itself is at a higher temperature than the prescribed chill holding temperature, or a lower temperature than the prescribed hot holding temperature, and the authorised officer is of the opinion that the food has not been produced, processed, or distributed in accordance with The Food Hygiene (Wales) Regulations 2006, the officer can deal with the food under regulation 27 of the regulations (also see regulation 23 in this regard). Voluntary procedures to remove food from the food chain can, however, be used in appropriate circumstances.

⁴⁷ Regulation 30 and schedule 4, paragraph 5 of The Food Hygiene (Wales) Regulations 2006

⁴⁸ Regulation 30 and schedule 4, paragraph 7 of The Food Safety and Hygiene (Wales) Regulations 2006

⁴⁹ Regulation 30 and schedule 4 of The Food Hygiene (Wales) Regulations 2006

If food is at a higher temperature than 8°C (chill holding) or below 63°C (hot holding), but does not fail food safety requirements, the authorised officer is to use professional judgement to determine the most appropriate action in the circumstances. The food can still be fit for consumption even if it has been maintained at temperatures within this range.

It is recommended that authorised officers enquire into the history of the food, in particular to ascertain whether it could previously have been exposed to such temperatures. Enforcement decisions are to take account of the history of the food and whether it is consistent with food safety. Authorised officers can adopt an educative approach as the first step towards securing compliance and discuss the requirements of the legislation with the FBO to ensure they understand the controls, why they are needed and how they can be achieved. In considering the approach to take, it is recommended that authorised officers consider how likely it is that food may be being consistently placed on the market at these temperatures.

8.10 Bottled waters

8.10.1 Guidance

Guidance regarding bottled water, including natural mineral waters and spring water, can be found on the following [FSA guidance](#).

The most recent list of all recognised sources within the UK can be found on the [natural mineral waters: lists of recognised products](#)

8.11 Food waste and animal by-products

8.11.1 Introduction

This section provides guidance to Competent Authorities on the control of food waste and disposal of ABP.

The legislative framework that controls the identification, categorisation, segregation, collection and disposal of food waste includes regulations and orders that are made under the Food Safety Act 1990, the Animal Health Act 1981 and Regulation (EC) No 852/2004.

For the purposes of the Practice Guidance, 'food waste' includes food material that is not fit or not intended for human consumption, although please note 'food waste' is often used to refer to surplus food that is being redistributed and so in those cases remains 'on the market' in food law terms.

Surplus food, where for commercial reasons the food is no longer intended for human consumption, which can include out of date, out of specification, surplus product or ingredients, or food in damaged packaging can be supplied for animal feed.

Many food businesses will be making efforts to reduce food waste and redistribute surplus food. The FSA supports surplus food redistribution where it can be done safely. A guidance document with helpful advice for any businesses redistributing surplus food titled [Best practice on food date labelling and storage advice](#) published in November 2017 by WRAP in collaboration with the FSA and Defra is available.

8.11.2 Catering waste

Food businesses in Wales, that produce more than 5kg of food waste per week, will have to consider the requirements of the [Waste Separation Requirements \(Wales\) Regulations 2023](#). Guidance on the requirements is available for:

- [Hospitality and food sector](#)
- [Small and medium sized businesses](#)
- [Leisure facilities and entertainment sector](#)
- [Residential settings \(including care homes\)](#)

8.11.3 Official controls of food businesses

An official control of a food business, including those of mobile establishments/premises, ships, aircraft and trains, may include a check on the arrangements that the business has for the collection and disposal of food waste.

Checks may:

include the arrangements in ports and airports for the collection and disposal of imported food waste from ships and aircraft

- verify that threats to human or animal health which can arise from the illegal disposal of food waste are effectively controlled by proper disposal in accordance with the requirements of the relevant legislation

8.11.4 Disposal of animal by-products

According to Regulation (EC) No 1069/2009, ABP means entire bodies or parts of animals, POAO or other products obtained from animals (includes eggs, milk and honey), which are not intended for human consumption including oocytes, embryos and semen⁵⁰. Articles 8-10 of Regulation (EC) No 1069/2009 set out what is comprised by Category 1, 2 and 3 materials.

Food material consisting of or containing products originating from animals becomes an ABP when the FBO determines that the product is no longer to be used for human consumption. Once this decision is made it is irreversible. The material then becomes a low risk (category 3) ABP. The origin and nature of this food material determines how it can be disposed of or used and the records required to be kept.

Where appropriate, official controls are recommended to include checks that FBOs ensure that their food safety management system includes a documented procedure for identification, labelling (cat 1, 2 or 3), handling and disposal of such products.

Containers used for collection of ABP need to be clearly labelled and easily distinguishable from containers used for collection of products destined for processing and subsequent human consumption. Articles 12-14 of Regulation (EC) No 1069/2009 set out requirements for the disposal of Category 1, 2 and 3 ABP.

⁵⁰ Article 3(1) of Regulation (EC) No 1069/2009

It is recommended that checks also verify that these documented procedures are carried out accordingly at the premises by the FBO.

8.11.5 Animal feed – former foodstuffs and co-products

Former foodstuffs, which can also be described as surplus food, may, subject to ABP rules be supplied for animal feed where for commercial reasons the food is no longer intended for human consumption. This can include out of date, out of specification, surplus product or ingredients, or food in damaged packaging.

Co-products of food processing may also be supplied for animal feed, for example, fruit pulp from the production of fruit juice and brewers' grains from the production of beer.

Former foodstuffs and co-products may be supplied direct to a farm or sent for further processing.

FBOs supplying former foodstuffs or co-products are also feed business operators. If they are aware that their products are destined for feed, they are required to register as a feed business with their feed authority and ensure compliance with Regulation (EC) No 183/2005 (feed hygiene), Regulation (EC) No 767/2009 (marketing and use of feed including labelling) and Regulation (EC) No 178/2002 on the general principles and requirements of food law, including feed.

Where, during an official control of a food premises, it is identified that former foodstuffs or co-products are being supplied for animal feed, it is recommended that the authorised officer establish whether the business is registered as a feed business with their local feed authority. If the FBO is not registered as a feed business, or that cannot be established, the local feed authority is to be informed.

8.11.6 Animal feed – animal by-product controls

If former foodstuffs or co-products consist of, contain, or are contaminated with POAO, they become subject to ABP controls⁵¹. These products generally cannot be used for feed for farmed animals. Further information on disposing food and former foodstuffs is available in [APHA guidance](#). When an FBO makes the decision that food of animal origin or food that contain POAO is no longer for human consumption then the former foodstuff becomes an ABP and this decision cannot be reversed.

8.11.7 Animal feed – catering waste

Catering waste is any waste food (including used cooking oil) that comes from restaurants, catering sites, commercial or household kitchens. Catering waste is never to be sent for use as animal feed, including for pet food, due to the risk of cross-contamination with POAO, for example, milk. Processed catering waste, known as 'swill', is also banned from feeding to animals.

⁵¹ The Animal By-Products (Enforcement) (Wales) Regulation 2014 and Regulation (EC) No 1069/2009

8.11.8 Major investigations

Competent Authorities might become aware of instances of apparent food fraud involving the misuse of food waste that could have potentially serious implications for public or animal health, for example, unfit meat being diverted into the human food chain. See chapter 5 for advice on food crime.

The investigation of such cases might have serious resource implications for Competent Authorities, both in terms of time and other resources. Nevertheless, it is important that the very serious risks to human health and animal health, that such cases might involve, are brought to the attention of the relevant enforcement authority and investigated without delay and that all necessary steps are taken to deal with them thoroughly.

The resources required can impact on a Competent Authority's ability to carry out its routine official control and enforcement programme. If such circumstances arise, it is important that the Competent Authority contacts the FSA, by emailing pm.wales@food.gov.uk as soon as practicable.

The FSA and the Competent Authority will then be able to discuss options, including whether support might be available, or whether the Competent Authority's official control programme can be re-prioritised to ensure that inspections of higher-risk premises are maintained.

8.12 Distance selling/mail order

8.12.1 Introduction

This section provides guidance to Competent Authorities on the enforcement of food law in relation to the distance selling of food and information on other generic legal requirements that relate to distance selling.

For the purposes of the Practice Guidance, 'the distance selling of food' means the advertisement of food for sale directly to consumers where the subsequent sale or supply of the food to the consumer takes place without the simultaneous presence of the consumer. Examples of distance selling include the sale of food through internet websites, mail order transactions and telephone sales.

The enforcement issues for Competent Authorities that relate to the distance selling of food depend primarily on the location of the advertiser and/or seller. It is important to bear in mind that food bought via an internet website involves a sale whereby the seller could be located anywhere in the world.

Generic law regulating distance selling in the UK is set out in The Consumer Contracts (Information, Cancellation and Additional Charges) Regulations 2013.

The central UK Competent Authority with responsibility for these regulations is the Department for Business and Trade (DBT). Enforcement is the responsibility of the Competition and Markets Authority (CMA) and Trading Standards Departments.

8.12.2 Distance selling of food from the UK

The distance selling of food from the UK takes place when the advertisement of food for sale or the sale transaction itself takes place within the jurisdiction of the UK legal system, even if the purchaser is based overseas.

The distance selling of food from the UK is covered by relevant food law. Food that is sold by a distance selling method from the UK, and advertisements for such food, is therefore comply with all relevant legal requirements.

Competent Authorities are:

- responsible for enforcing food law in relation to the distance selling of food from the UK, including food that is advertised or sold through UK-based internet sites
- to have appropriate means of monitoring the distance selling of food by businesses for which they act as primary authority
- to include an assessment of relevant food hygiene, safety, advertising, compositional and labelling matters in programmed official controls of businesses involved in the distance selling of food from the UK in their areas

8.12.3 Distance selling of food from outside the UK

The distance selling of food from outside the UK takes place when the advertisement of food for sale or the sale transaction itself takes place outside the jurisdiction of the UK.

8.12.4 Other guidance

The FSA has published [guidance on food sold online for local authorities](#).

A [Guide to Good Hygiene Practice for the mail order food industry](#), developed in accordance with article 8 of Regulation (EC) No 852/2004, is also available.

8.13 Additional guidance notes to Competent Authorities

Additional guidance on a variety of food law matters is available on the FSA's communications platform.

Glossary

Alkaline phosphatase (ALP)

In regard to phosphatase testing in milk ALP; is an intrinsic enzyme secreted by ruminants in their milk. The enzyme is denatured during pasteurisation of the milk, hence is used to determine the efficacy of milk being heat treated.

Animal By-Products (ABP)

Defined in article 3(1) of Regulation (EC) No 1069/2009 as 'entire bodies or parts of animals, products of animal origin or other products obtained from animals that are not intended for human consumption'.

Animal Plant Health Agency (APHA)

APHA is an executive agency of Defra operating across Great Britain and is responsible for the protection of animal health and welfare.

APHA's feed enforcement activities are focused on the ban on feeding animal protein to ruminants, under Regulation (EC) No 999/2001 (known as the 'TSE Regulations'), controls relating to catering waste and swilling feed under Regulation (EC) No 1069/2009 (known as the 'ABP Regulations') and approval or registration of premises handling animal by-products.

Approved establishment

An establishment that has been approved pursuant to article 4 of Regulation (EC) No 853/2004 for handling, preparing and/or producing products of animal origin.

Approved Game Handling Establishment (AGHE)

An approved premise in accordance with the Regulation (EC) No 853/2004. Where a business is processing unlimited quantities of game meat from brought -in fur/in feather carcasses and supplying it to retail and wholesale customers.

Audit

Has the meaning as defined by article 3(30) of Regulation (EU) 2017/625 to mean a systematic and independent examination to determine whether activities and related results comply with planned arrangements and whether these arrangements are implemented effectively, by the FBO, and are suitable to achieve objectives.

This includes planned partial or full audits:

- a 'full audit', is an examination of planned arrangements and whether they are implemented effectively and will consider all aspects of an FBO's operations
- a 'partial audit', is an audit that covers only certain aspects of an FBO's operation

Authorised officer

Means a person (whether, or not an officer of the enforcement authority) who is authorised by the Competent Authority, either generally or specifically, to act in relation to matters arising under food law

Awarding bodies

In relation to the Code, the awarding bodies are: the Chartered Institute of Environmental Health (CIEH); the Chartered Trading Standards Institute (CTSI) and the Institute of Food Science and Technology (IFST).

Border Control Post (BCP)

Has the meaning defined in article 3(38) of Regulation (EU) 2017/625 to mean a place, and the facilities belonging to it, designated for the performance of official controls provided for in article 47(1) of Regulation (EU) 2017/625.

Broadly compliant (Food hygiene)

An establishment that has an intervention rating score of not more than ten points under each of the following parts of annex 1: Food hygiene scoring system Part 2: Level of (Current) Compliance - Hygiene and Level of (Current) Compliance – Structure; and Part 3: Confidence in Management.

Centre for Environment, Fisheries and Aquaculture Science (Cefas)

Cefas is an executive agency of Defra that collects and manages and interprets data on aquatic environment, biodiversity, and fisheries.

Chartered Institute of Environmental Health (CIEH)

A membership and awarding body for the environmental health sector.

Chartered Trading Standards Institute (CTSI)

CTSI is a membership and awarding body that represents Trading Standards professionals working in the UK and overseas - in local authorities, business and consumer sectors and central government.

Cleaning in Place (CIP)

A method of cleaning applied to remove residues from complete items of plant equipment without dismantling or opening the equipment.

Competency standard

The FSA document setting out the knowledge and skills for the effective delivery of official food and feed controls and other activities.

Compliance notice

A notice served by an authorised officer where they have reasonable grounds for believing that any person has not complied with, is not complying with, or is not likely to comply with any provision specified in the first column of table 2 of schedule 1, 2, 3 or 4 or regulation 13(2) of the Food Additives, Flavourings, Enzymes and Extraction Solvents (Wales) Regulations 2013.

Compliant

Conforming with the requirements of the law.

Conditional approval

Approval granted by a Competent Authority pursuant to article 148(4) of Regulation (EU) 2017/625 if it appears to a Competent Authority that an establishment meets all the infrastructure and equipment requirements. Conditional approval must not exceed a total of six months, with the exception of factory and freezer vessels, conditional approval must not exceed 12 months.

Consignment

Has the meaning as defined in article 3(37) of Regulation (EU) 2017/625 to mean a number of animals or quantity of goods covered by the same official certificate, official attestation, or any other document, conveyed by the same means of transport, and coming from the same territory a country outside the UK , and, except for goods subject to the rules referred to in point (g) of article 1(2) of Regulation (EU) 2017/625, being of the same type, class, or description.

Consultant in Communicable Disease Control (CCDC)

A senior role within the health protection team who provides leadership, management, and oversight of the health protection function, including the response to incidents and outbreaks.

Consultant in Public Health Medicine (CPHM)

The role of the CPHM in the case of a food poisoning outbreak is to determine if there is a true outbreak and initiate and coordinate any necessary action including the use of the local outbreak control plan. They also advise the person in charge of any immediate actions necessary to control the outbreak.

Continuing Professional Development (CPD)

How members of a profession maintain, improve, or broaden their knowledge and skills and develop the qualities required in their professional lives.

Control verification procedures

More commonly referred to as internal monitoring procedures, has the meaning as defined in article 3(6) of Regulation (EU) 2017/625 to mean the arrangements put in place and actions performed by the Competent Authorities for the purpose of ensuring that official controls and other official activities are consistent and effective.

Could

Is generally used to indicate those provisions which are considered best practice.

Critical Control Point (CCP)

Any step in a process in which hazards can be prevented, eliminated, or reduced to acceptable levels. Example of critical control points include cooking, cooling, e-heating, and holding.

Department for Environment, Food and Rural Affairs (Defra)

The Department of Food and Rural Affairs (Defra) is the UK government department responsible for the environment, food, and farming industry.

Detention Notice

A notice served on an FBO or duly authorised representative where detention of any animal or food for the purpose of examination (including the taking of samples) is required as specified in regulation 9 The Food Hygiene (Wales) Regulations 2006.

Documentary check

Has the meaning as defined in article 3(41) of Regulation (EU) 2017/625 to mean the examination of the official certificates, official attestations and other documents including documents of a commercial nature, which are required to accompany the consignment as provided for by the rules referred to in article 1(2), by article 56(1) or by implementing acts adopted in accordance with articles 77(3), 126(3), 128(1) and 129(1).

Domestic premises

A dwelling house or other building used principally, but not exclusively as a dwelling and its curtilage.

Early Warning System (EWS)

An emerging risk detection tool to predict hazards for specific food and feed.

Emergency Prohibition Order (EPO)

Has the meaning as defined by regulation 12(1) Food Safety Act 1990 to mean if an authorised officer is satisfied the health risk is fulfilled, he may, by notice, serve on the proprietor of the business and impose the appropriate prohibition.

Enforcement Authority

Has the meaning as defined by regulation 2(1) The Food Hygiene (Wales) Regulations 2006 to mean the authority which is responsible for executing and enforcing the Hygiene Regulations.

Environmental Health Registration Board (EHRB)

An awarding body in the UK which issued certificates of registration to those who had successfully completed an approved course of study in the subject of environmental health that included an accredited course, work based learning and professional examinations.

Escherichia coli O157 (E. coli O157)

A VTEC strain that can cause illness in humans. Symptoms can range from mild gastroenteritis, severe bloody diarrhoea, and kidney damage.

Establishment

Has meaning as defined in article 2(1)(c) of Regulation (EC) No 852/2004 to mean any unit of a food business.

Evidence

Information or items which provide proof of an allegation.

Export

The action of sending or transporting a commodity outside of a relevant territory.

Food alert

Communication from the FSA to a Competent Authority concerning a food hazard or other food incident, where specific actions/responses are required to be undertaken by the Competent Authority. A 'Food Alert Update' should be read accordingly.

Food business

Has the meaning as defined by article 3(2) of Regulation (EC) No 178/2002 to mean any undertaking, whether for profit or not and whether public or private, carrying out any of the activities related to any stage of production, processing, and distribution of food.

Food business operator (FBO)

Has the meaning as defined by article 3(3) of Regulation (EC) No 178/2002 to mean the natural or legal persons responsible for ensuring that the requirements of food law are met within the food business under their control.

A **natural person** is a human being, as opposed to an artificial, legal, or juristic person.

A **legal person** has a legal name and has rights, protections, privileges, responsibilities, and liabilities under law, just as natural persons (humans) do. Legal personality allows one or more natural persons to act as a single entity (such as a limited company - considered under law separately from its individual members or shareholders) for legal purposes.

Food crime

Serious fraud and related criminality within food supply chains (this also includes drink and animal feed).

Food examiner

Any person who possesses the requisite qualifications to carry out examinations.

Food hazard

A biological, chemical, or physical agent in food capable of causing adverse effect to public health.

Food hygiene

The measures and conditions necessary to control hazards and to ensure fitness for human consumption of a foodstuff, taking into account its intended use as set out in Regulation (EC) No 852/2004.

Food Hygiene Intervention

An intervention that ensures food meets the requirements of food hygiene law, including:

- microbiological quality
- absence of pathogenic micro-organisms
- safety for consumption

Food Hygiene Rating Scheme (FHRS)

A scheme that applies to Wales, England, and Northern Ireland designed to give information to the public on what each food business had achieved on their last food hygiene inspection carried out by the local authority, rated from 0 (urgent improvement necessary) to 5 (hygiene standards are very good).

Food incident

Any event where, based on the information available, there are concerns about actual or suspected threats to the safety, quality or integrity of food that could require intervention to protect consumers' interests.

Food for Specific Groups

The Food for Specific Groups (Information and Compositional Requirements) (Wales) Regulations 2016 establishes compositional and information requirements for the following categories of food: infant formula and follow-on formula; processed cereal- based food and baby food; food for special medical purposes; total diet replacement for weight control.

Food Standards Agency (FSA)

An independent, non-ministerial department, working across England, Wales and Northern Ireland, whose objectives are to protect public health from risks arising from the consumption of food and to protect the interests of consumers in relation to food

Formal action

The taking of action against a food business operator as set out in the legislation including the service of a statutory notice to remedy non-compliance with legal requirements, and the institution of legal proceedings for breaches of legal requirements.

Formal notice

Means a notice as defined in the various Acts of Parliament or statutory instruments relating to food law.

FSA Communications Platform

The method used by the FSA to disseminate mass communications to local authorities

Goods

Has the meaning as defined in article 3(11) of Regulation (EU) as 2017/625, as: 'goods means all that is subject to one or more of the rules referred to in Article 1(2), excluding animals;'

Article 1(2) of Regulation (EU) 2017/625 states: 'This Regulation shall apply to the official controls performed for the verification of compliance with the rules in the areas of:

- (a) food and food safety, integrity and wholesomeness at any stage of production, processing and distribution of food, including rules aimed at ensuring fair practices in trade and protecting consumer interests and information, and the manufacture and use of materials and articles intended to come into contact with food;
- (b) deliberate release into the environment of Genetically Modified Organisms (GMOs) for the purpose of food and feed production;
- (c) feed and feed safety at any stage of production, processing and distribution of feed and the use of feed, including rules aimed at ensuring fair practices in trade and protecting consumer health, interests and information;
- (d) animal health requirements;
- (e) prevention and minimisation of risks to human and animal health arising from animal by-products and derived products;
- (f) welfare requirements for animals;
- (g) protective measures against pests of plants;
- (h) requirements for the placing on the market and use of plant protection products and the sustainable use of pesticides, with the exception of pesticides application equipment;
- (i) organic production and labelling of organic products;
- (j) use and labelling of protected designations of origin, protected geographical indications and traditional specialities guaranteed'.

Hazard

Has the meaning as defined by article 3(14) of Regulation (EC) No 178/2002 to mean a biological, chemical, or physical agent in, or condition of, food or feed with the potential to cause an adverse health effect.

Hazard Analysis Critical Control Points (HACCP)

HACCP is a systematic preventive approach to food and feed safety from biological, chemical, and physical hazards in production processes, that can cause the finished product to be unsafe, and designs measurement to reduce these risks to a safe level.

Home Authority

Means the authority where the relevant decision-making base of an enterprise is located.

Hygiene

The measures and conditions necessary to control hazards and to ensure fitness for human consumption of a foodstuff considering its intended use.

Hygiene Emergency Prohibition Notice (HEPN)

A notice served by the authorised officer where there is an imminent risk of injury to health which prohibits the use of a process, treatment, premises, or equipment, as appropriate, as specified in regulation 8 of The Food Hygiene (Wales) Regulations 2006.

Hygiene Improvement Notice

A notice served by the authorised officer on an FBO where they have failed to comply with the hygiene regulations as specified in regulation 6 of The Food Hygiene (Wales) Regulations 2006.

Hygiene Prohibition Order (HPO)

An order granted by the magistrate's court following the conviction of a FBO for an offence under the Food Hygiene (Wales) Regulations 2006 as specified in Regulation 7 of those regulations

Hygiene Regulations

As defined by regulation 2 of The Food Hygiene (Wales) Regulations 2006.

Import

The action of bringing in goods and/or services from another country outside of Great Britain.

Improvement Notice

A notice served on a FBO by an authorised officer who has reasonable grounds for believing that the proprietor of a food business is failing to comply with any regulatory requirement, as specified in section 10 of the Food Safety Act 1990.

Inspection

To mean the examination of any aspect of feed, food, animal health and animal welfare in order to verify that such aspect(s) comply with the legal requirements of feed and food law and animal health and welfare rules. This includes partial or full inspections:

- a 'full inspection', is a check on compliance with legal requirements and will consider all aspects of an FBOs operations
- a 'partial inspection', which is an inspection that covers only certain aspects of an FBOs operations

Institute of Food Science and Technology (IFST)

A professional body concerned with all aspects of food science and technology

Intelligence

Information that has been evaluated to assess its relevance and reliability and verified where possible.

Intervention

Regulatory actions taken by a government in order to affect or interfere with decisions made by individuals, groups, or organisations regarding social and economic matters. Interventions include official food controls and other interventions such as education, advice and coaching, information and intelligence gathering (including sampling where the analysis is not to be carried out by an Official Laboratory).

Institute of Food Science and Technology (IFST)

A professional body concerned with all aspects of food science and technology.

Investigation

The action taken by the Competent Authority to gather evidence where non-compliance is suspected.

Lead food officer (LFO)

The authorised lead food officer(s), appointed by the Competent Authority in relation to food, who demonstrates the relevant competencies.

Less than thoroughly cooked (LTTC)

Burgers not thoroughly cooked, they contain pink meat in the middle.

Live bivalve molluscs (LBM)

References to live bivalve molluscs also include live echinoderms, live tunicates, and live marine gastropods, in line with annex I, paragraph 2 of Regulation (EC) No 853/2004 laying down specific hygiene rules for food of animal origin (Regulation (EC) No 853/2004), except for parts of the Code which deal with purification of live bivalve molluscs.

Local Action Group (LAG)

A non-profit group made up of representatives of the local community that deliver support to their respective rural areas especially the implementation of small-scale projects.

Local Authority (LA)

Has the meaning as defined in section 270 of the Local Government Act 1972 to mean a county council, a county borough council, or community council.

Local Government Association (LGA)

The LGA are the national voice of local government, working with councils to support, promote and improve local government services.

Malicious tampering

For the purposes of the Practice Guidance, means the deliberate contamination of food by terrorist activity, or with a view to blackmail or extortion.

Maritime and Coastguard Agency (MCA)

The MCA is an executive agency of the Department of Transport working to prevent the loss of life on the coast and at sea. They also produce legislation and guidance on maritime matters and provide certification to seafarers.

May

On its own indicates an optional exercise of a power or function.

May not

Indicates a prohibition.

Memorandum of Understanding (MoU)

A written agreement on the exchange of information between two or more parties.

Minced Meat

Means boned meat that has been minced into fragments and contains less than 1% salt.

Mobile establishment

Premises other than permanent premises, and 'relevant moveable premises' means moveable premises, used for the transport or preparation of food or the retail sale of food on five or more days, whether consecutive or not, in any period of five consecutive weeks.

Monitoring

To mean conducting a planned sequence of observations or measurements with a view to obtaining an overview of the state of compliance with food law.

Must

Is used to confirm an obligation.

National Enforcement Priorities (NEPs)

The NEPs for animal feed and food hygiene at the level of primary production assist Competent Authorities and businesses in maintaining standards and safeguarding public health.

National Food Crime Unit (NFCU)

The National Food Crime Unit provides a nationwide focus on enforcement against serious fraud and related criminality in food and feed supply chains.

National Health Service (NHS)

A government funded medical and health care service in the UK.

Non-compliance

A failure to comply with the one or more requirements of a food law.

Non-official controls

Any activity, which is not an official control, or another official activity undertaken by the Competent Authority, that does not verify compliance. The intention of the activity is to maintain contact with a food business establishment.

Non-UK country

A country which is outside the United Kingdom.

Official attestation

Has the meaning as defined by article 3(28) of Regulation (EU) 2017/625 to mean any label, mark or other form of attestation issued by the operators under the supervision, through dedicated official food controls, of the Competent Authorities or by the Competent Authorities themselves, and providing assurance concerning compliance with one or more requirements laid down in this regulation or in the rules referred to in article 1(2) Regulation (EU) 2017/625.

Official certificate

Has the meaning as defined by article 3(27) of Regulation (EU) 2017/625 to mean a paper or electronic document signed by the certifying officer and providing assurance concerning compliance with one or more requirements laid down in the rules referred to in article 1(2) of Regulation (EU) 2017/625.

Official control

Has the meaning as defined by article 2(1) of Regulation (EU) 2017/625 to mean activities performed by the Competent Authorities, or by the delegated bodies or the natural persons to which certain official control tasks have been delegated in accordance with Regulation (EU) 2017/625 in order to verify compliance by the operators and that animals or goods meet the requirements laid down in the rules referred to in article 1(2) of (EU) 2017/625, including for the issuance of an official certificate or official attestation.

Official laboratory

A laboratory accredited for the purposes of analysis, and which appears on the list of official control laboratories.

Official Veterinarian

Has the meaning as defined in article 3(32) of Regulation (EU) 2017/625 to mean a veterinarian appointed by a Competent Authority, either as staff or otherwise, and appropriately qualified to perform official controls and other official activities in accordance with this Regulation and the relevant rules referred to in article 1(2) of Regulation (EU) 2017/625.

Originating authority

Means the authority in whose area final food production takes place.

Other official activities

Activities, other than official controls, which are performed by the Competent Authorities, or by the delegated bodies or the natural persons to which certain other

official activities have been delegated in accordance with Regulation (EU) 2017/625. Including activities aimed at verifying the presence of animal diseases or pests of plants, preventing, or containing the spread of such animal diseases or pests of plants, eradicating those animal diseases or pests of plants, granting authorisations or approvals, and issuing official certificates or official attestations.

Outbreak

An incident in which two or more people experiencing a similar illness are linked in time or place, usually a foodborne disease and or infectious intestinal disease.

Penalty

The punishment imposed by a court on conviction for an offence under food legislation.

Physical check

Has the meaning as defined in article 3(43) of Regulation (EU) 2017/625 to mean check on animals or goods and, as appropriate, checks on packaging, the means of transport, labelling and temperature, the sampling for analysis, testing or diagnosis and any other check necessary to verify compliance with the rules referred to in article 1(2) of (EU) 2017/625.

Port Health Authority (PHA)

Has the meaning as defined in section 2 of the Public Health (Control of Diseases) Act 1984 to mean in relation to a port or part of a port any local authority whose district, or any part of whose district, forms part of, or abuts on, that port or part of a port, and any conservators, commissioners or other persons having authority in, over or within that port or part of a port.

Primary Authority

As provided for in section 23A of the Regulatory Enforcement Sanctions Act 2008, a competent authority that has formed a partnership with a business or co-ordinator and is nominated by the Secretary of State to exercise certain functions through that partnership.

Primary production (Food)

The production, rearing or growing of primary products including harvesting, milking, and farmed animal production prior to slaughter. It also includes hunting and fishing and harvesting of wild products as defined in article 3(17) of Regulation (EC) No 178/2002.

Prohibition Order (PO)

An order served by the Court imposing appropriate prohibitions to a food business when convicted of an offence under any regulations to which the Food Safety Act 1990 apply, and where the Court is satisfied the health risk condition is fulfilled by that business.

Public Analyst

Scientists that ensure the safety and correct description of food by testing for compliance with legislation as specified in section 27 Food Safety Act 1990 and regulation 4 of The Food Safety (Sampling and Qualifications) (Wales) Regulations 2013.

Public Health Wales (PHW)

National Public Health agency, which reports to the Cabinet Secretary for Health, Wellbeing and Sport in Welsh Parliament. Its role is to protect and improve health and well-being and reduce health inequalities in Wales.

Rapid Alert System for Food and Feed (RASFF)

RASFF is a quick and effective tool for the exchange of information between Competent Authorities when risks to human health are detected in the food and feed chain and measures - such as withholding, recalling, seizure or rejection of the products concerned are taken. This quick exchange of information allows all members of the network to verify immediately whether they are also affected by the problem. Whenever the product is already on the market and should not be consumed, the authorities are then in a position to take all urgent measures, including giving direct information to the public, if necessary.

Raw cows' drinking milk (RCDM)

Cow's milk that has not been heat treated above 40°C (it is raw milk) and is intended for direct human consumption.

Readily available

Any documents that are required to be readily available means that both consumers and businesses can quickly and easily obtain them, either in electronic or hardcopy format.

Records

Means information preserved in writing or electronically/digitally.

Registering authority

The Competent Authority in whose area the FBO is located. In relation to a mobile establishment, the registering authority will be where it is ordinarily kept.

Remedial Action Notice (RAN)

A notice served by an authorised officer to an FBO where any of the requirements of the 'hygiene regulations', as defined by regulation 2 of The Food Hygiene (Wales) Regulations 2006, are being breached or an inspection under the Hygiene Regulations is being hampered.

Risk

The chance or probability that a person will be harmed or experience an adverse health effect if exposed to a hazard.

Royal Air Force

The UK aerial warfare force.

Rural Payments Agency

The Rural Payments Agency is an executive agency responsible for Common Agricultural Policy payments to farmers and traders in Wales.

Safety

The quality of averting or not causing injury, danger, or loss.

Safer food better business (SFBB)

Food safety management procedures and food hygiene regulations for small businesses.

Sampling

To mean taking feed or food or any other substance (including from the environment) relevant to the production, processing and distribution of feed or food or to the health of animals, in order to verify through analysis compliance with feed or food law or animal health rules.

Sanction

The provision within a statute to take punitive action for failure to comply with the provisions of the statute.

Scottish Food Safety Officers Registration Board (SFSORB)

A committee of the Royal Environmental Health Institute of Scotland, who determine the pre-registration academic standard to be attained by persons applying for the award of the Higher Certificate in Food Premises Inspection, the Ordinary Certificate in Food Premises Inspection, and the Higher Certificate in Food Standards Inspection qualifications.

Shellfish environmental monitoring

The collection of shellfish and water official control samples from designated sampling points as part of the Shellfish Official Control Monitoring Programmes, in accordance with article 57 and chapter II of title V of Commission Implementing Regulation (EU) 2019/627.

Should

Is used to indicate statutory guidance.

Signed

Means having a signature affixed either in writing or by electronic means.

Standards

Rules or principles defined in food safety law that are used as the basis for judgment against.

Surveillance

To mean a careful observation of one or more food businesses, or FBOs or their activities, in order to gather information.

Tuberculosis (TB)

An infectious disease usually caused by the *Mycobacterium tuberculosis* bacteria that mainly affects the lungs.

United Kingdom Accreditation Service

UK's National Accreditation Body, responsible for determining, in the public interest, the technical competence and integrity of organisations.

Validation

Means confirmation that requirements have been complied with.

Verification

To mean the checking, by examination and the consideration of objective evidence, whether specified requirements have been fulfilled.

Writing

Has the meaning as defined by schedule 1 of the Interpretation Act 1978 and schedule 1 of the Legislation (Wales) Act 2019 to mean typing, printing, lithography, photography, and other modes of representing or reproducing words in a visible form, and expressions referring to writing are construed accordingly.

Annex 1: Template service plan

1. Service Aims and Objectives	Details
1.1 Aims and objectives	<ul style="list-style-type: none"> • a statement of the service's aims and objectives
1.2 Links to corporate objectives and plans	<ul style="list-style-type: none"> • this section identifies how the service plan(s) fit into the Competent Authority's corporate planning process and how it plays its part in meeting the Competent Authority's objectives. This includes meeting any relevant national indicator • it also identifies any cross linkage with other plans that have been adopted by the Competent Authority

2. Background	Details
2.1 Profile of the Competent Authority	<ul style="list-style-type: none"> • this section includes details of the population, size, and nature of the Competent Authority
2.2 Organisational structure	<ul style="list-style-type: none"> • a simple chart showing the council services and committee structure which shows where the food service fits in • the structure identifies the manager/s responsible for the delivery of official controls and the officer/s with specialist responsibility for food hygiene and/or food standards, if different, and the provision made for specialist services provided, for example, by public analysts and food examiners
2.3 Scope of the food service	<ul style="list-style-type: none"> • a brief statement that sets out the scope of the responsibilities and service provided • this identifies where areas of the food service are provided by another organisation, for example, contractors

2. Background	Details
	<ul style="list-style-type: none"> any other services that are delivered alongside the food service, for example, health and safety inspections, can be described here
2.4 Demands on the food service	<ul style="list-style-type: none"> this section includes a brief outline of: <ul style="list-style-type: none"> the establishment's profile the number of approved or registered establishments in the Competent Authority's area any specific local requirements associated with specialist or complex processes the service delivery points used by the Competent Authority the times at which the service is available from these points and any out of hours provisions this section also enables the Competent Authority to describe any external factors that may impact on their service, for example: <ul style="list-style-type: none"> the percentage of business owners whose first language is not English the percentage of food establishments that are manufacturing foods imported food responsibilities seasonal activities
2.5 Regulation policy	<ul style="list-style-type: none"> A brief reference statement to the Competent Authority's documented enforcement policy

3. Service delivery	Details
3.1 Official Controls at food establishments	<ul style="list-style-type: none"> a statement in relation to the Competent Authority's policy on official and non-official controls, other official activities and how they will be selected in individual cases, including details of the programme of official controls and other official activities at food establishments to be undertaken. This includes: <ul style="list-style-type: none"> the establishment's profile

3. Service delivery	Details
	<ul style="list-style-type: none"> – the numbers of official controls programmed – an estimation of the number of revisits that will be made – an estimation of resources required for example staffing • details of any targeted official control activity that the Competent Authority intends to carry out, including any extra resources this may require; this could include specific project work • identification of any priorities relating to nationally or locally driven outcomes, such as compliance with new legislation or improved compliance with existing legislation and other central government initiatives • include, where appropriate, the arrangements the Competent Authority has made to ensure they have access to adequate appropriate expertise to enable competent inspection of any specialised processes identified in section 2
3.2 Food complaints	<ul style="list-style-type: none"> • a statement in relation to the Competent Authority's policy, regarding the investigation of food complaints, including an estimation based on previous years' trends of the likely demand on the service and an estimation of the resources required
3.3 Home Authority and Primary Authority	<ul style="list-style-type: none"> • a statement in relation to: <ul style="list-style-type: none"> – the Competent Authority's policy on the Home Authority principle and, where applicable, Primary Authority, including an estimation of the resources required in relation to meeting and advising those businesses for whom it acts, developing inspection plans for those businesses for whom it is the primary authority, and responding to notifications and enquiries from other enforcing authorities – how delivery will be resourced
3.4 Advice to business	<ul style="list-style-type: none"> • a statement in relation to the Competent Authority's policy regarding advice to business (as part of the overall policy of interventions) including an estimation of the number of contacts from business and the resources necessary to provide the service

3. Service delivery	Details
	<ul style="list-style-type: none"> • this section includes, where appropriate, any input the Competent Authority has to business partnerships or forums
3.5 Food sampling	<ul style="list-style-type: none"> • a statement in relation to the Competent Authority's sampling policy, including the basis of the sampling programme and an estimate of the numbers of samples that will be taken from establishments, or submitted, in relation to complaints, and any relevant resource allocation including staffing • detail of the arrangements that the Authority has made for the analysis and/or examination of the samples
3.6 Food safety incidents	<ul style="list-style-type: none"> • a statement in relation to the Competent Authority's policy on handling food alerts, to confirm that it complies with the relevant Codes of Practice, including an estimation of the likely demand on the service and an estimation of the resources required
3.7 Liaison with other organisations	<ul style="list-style-type: none"> • the arrangements the Competent Authority has made to ensure that action taken in its area is consistent with those of neighbouring Competent Authorities, including: <ul style="list-style-type: none"> – any liaison the Competent Authority has with other Competent Authorities – any liaison, where appropriate, with OPSS – any arrangements with other official control bodies or government inspectorates to co-ordinate food controls – any representation on government working groups or committees – liaison with professional body working groups – liaison and involvement/participation with relevant food liaison advisory groups and similar or related bodies – any formal liaison with voluntary groups and other public sector bodies – any formalised liaison with other services within the Competent Authority – any commitment to local/regional groups – an estimation of the resource allocation

3. Service delivery	Details
3.8 Food safety and standards promotional work	<ul style="list-style-type: none"> • a statement of any food safety/standards promotional work, or information/intelligence gathering work, which the Competent Authority intends to carry out in the year and the measures it will use to evaluate its effectiveness, with an estimate of the resource allocation including staffing to undertake this work
3.9 Control and investigation of outbreaks and food related infectious disease	<ul style="list-style-type: none"> • a statement in relation to the Competent Authority's policy on the investigation of food poisoning notifications and outbreak control, including an estimation based on previous years' trends of likely demand on the service and an estimation of the resources required

4. Resources	Details
4.1 Financial allocation	<ul style="list-style-type: none"> • this section sets out the overall level of expenditure involved in providing the service and examine the trend of growth or reduction in real terms, including details in relation to: <ul style="list-style-type: none"> – non-fixed costs including staffing – travel and subsistence – equipment, including investment in IT – sampling budgets – financial provision made by the Competent Authority for any legal action necessary, as part of their enforcement function
4.2 Staffing allocation	<ul style="list-style-type: none"> • a statement of: <ul style="list-style-type: none"> – the number of posts required to deliver the service, – the number of staff working on food law enforcement and related matters (in terms of full-time equivalents), which distinguishes qualified staff from support staff • these figures are expressed in terms of levels of competency with reference to the Code, including support staff

4. Resources	Details
4.3 Staff development plan	<ul style="list-style-type: none"> • a statement in relation to any relevant ongoing training, including that to be provided in-house and externally for authorised and trainee officers in the year ahead

5. Quality Assessment	Information required
5.1 Quality assessment and internal monitoring	<ul style="list-style-type: none"> • a statement specifying the measures to be taken to assess the quality of the Competent Authority's service, including: <ul style="list-style-type: none"> – any relevant monitoring arrangements developed by the Competent Authority to assess performance against the Standard – any agreed inter-authority audit or peer review arrangements – details of any externally accredited or self-assessment models used

6. Review	Information required
6.1 Review against the service plan	<ul style="list-style-type: none"> • this section sets out the process for reviewing and reporting delivery of the service plan, including: <ul style="list-style-type: none"> – information on the previous year's performance against the service plan – any specified performance targets and performance standards and targeted outcomes
6.2 Identification of any variation from the service plan	<ul style="list-style-type: none"> • this section identifies where the Competent Authority was at variance from their service plan and, where appropriate, the reasons for that variance • additional work carried out by the Competent Authority in other areas of enforcement may have achieved the same objective, and if so, clearly identified in this part of the plan
6.3 Areas of improvement	<ul style="list-style-type: none"> • this section sets out Competent Authority plans for any relevant improvement or service development identified as necessary by the review or the quality assessment

Annex 2: Registration

A2.1 Registration of food establishments

A2.1.1 Who is a food business operator?

When considering who to register as the FBO under article 6(2) of Regulation (EC) No 852/2004, Competent Authorities can request that the FBO identifies themselves, including the name of the operator in the case of legal persons, address, and type of business entity on the registration form.

The types of business entity are defined according to the legal system for an individual country but may include a charity, limited company, organisation, or trust that operates it, partnerships, and sole traders.

A2.1.2 Requirement to register a food business establishment

Under article 6(2) of Regulation (EC) No 852/2004, FBOs are required to register the establishment(s) under their control with the appropriate Competent Authority.

FBOs are advised to submit a registration of a food establishment at least 28 days before the business starts trading or the food operations commence.

Competent Authorities are encouraged to make information available to businesses on the requirements relating to registration.

There may be situations when a FBO registers as a food business in advance of 28 days before they intend to start operations. The FSA's view is that in such circumstances, Competent Authorities may find it useful to avoid inputting registrations onto their databases until they have confirmation that those businesses have started or have an imminent date to start operations. This could mean keeping a temporary record of such businesses with some periodic checks to verify if they have commenced food operations.

If registration relates to a business that includes more than one mobile unit, details of all mobile units that the FBO own would be required. Details would include:

- registration/identification numbers
- identifying features
- types of facilities
- food types

A2.1.3 Channels of registration

It will be necessary for FBOs, when registering, to provide Competent Authorities with full details of the activities undertaken at the establishment(s) under their control.

Under regulation 32(1) of The Provision of Services Regulations 2009, Competent Authorities are required to have an electronic means for FBOs to register food business establishments. Digital registration is the preferred method for registration and FBOs, where possible, are encouraged to complete their registration online.

The Register a Food Business (RAFB) online service is a tool for FBOs to register their food business with the Competent Authority responsible for food safety in their area. This service can be accessed via the [FSA website](#), or through the participating Competent Authority's website.

Competent Authorities are encouraged to help those FBOs requiring support to complete their registration online. Support can be given in person at the establishment, over the phone or by inviting a FBO into the office.

A2.1.4 Use of Information from other sources

Where information about the address of the establishment and the activity carried out is already available from other sources, that information may be used for registration purposes⁵².

A2.1.5 Primary production

Establishments at the level of primary production that have been registered with the Rural Payments Wales (RPW) prior to 1 December 2006 are considered registered for the purposes of Article 6(2) of Regulation (EC) No 852/2004.

A2.1.6 Fishing vessels

Fishing Vessels at the level of primary production that have been registered with the Marine Management Organisation (MMO) are considered registered for the purpose of Article 6(2) of Regulation (EC) No 852/2004. This list is published online by the MMO.

A2.2 Exemptions from registration

A2.2.1 Degree of organisation and continuity of activities

Establishments undertaking food activities that do not involve a certain degree of organisation and a continuity of activities do not meet the definition of a food business establishment, so fall outside the scope of Regulation (EC) No 852/2004. The European Commission [guidance](#) on the implementation of certain provisions of Regulation (EC) No 852/2004 on the hygiene of foodstuffs states that, 'somebody who handles, prepares, stores or serves food occasionally and on a small scale cannot be considered as an 'undertaking'.

When making a judgement about these two elements, it is recommended that Competent Authorities do not consider continuity and organisation in isolation, they are to take all relevant factors into consideration. For example, if an activity occurs only once or only low risk food is handled, it does not necessarily mean it is exempt from registration.

⁵² Article 10(2) of Regulation (EU) 2017/625

Although some establishments and/or activities may be exempt from registration requirements, they do, however, remain subject to certain provisions of the Food Safety Act 1990 and Regulation (EC) No 178/2002.

A2.2.2 Approved establishments

Article 4(1)(b) of Regulation (EC) No 853/2004 stipulates that food establishments that are subject to approval under Regulation (EC) No 853/2004 are not required to also register with the Competent Authority under Regulation (EC) No 852/2004.

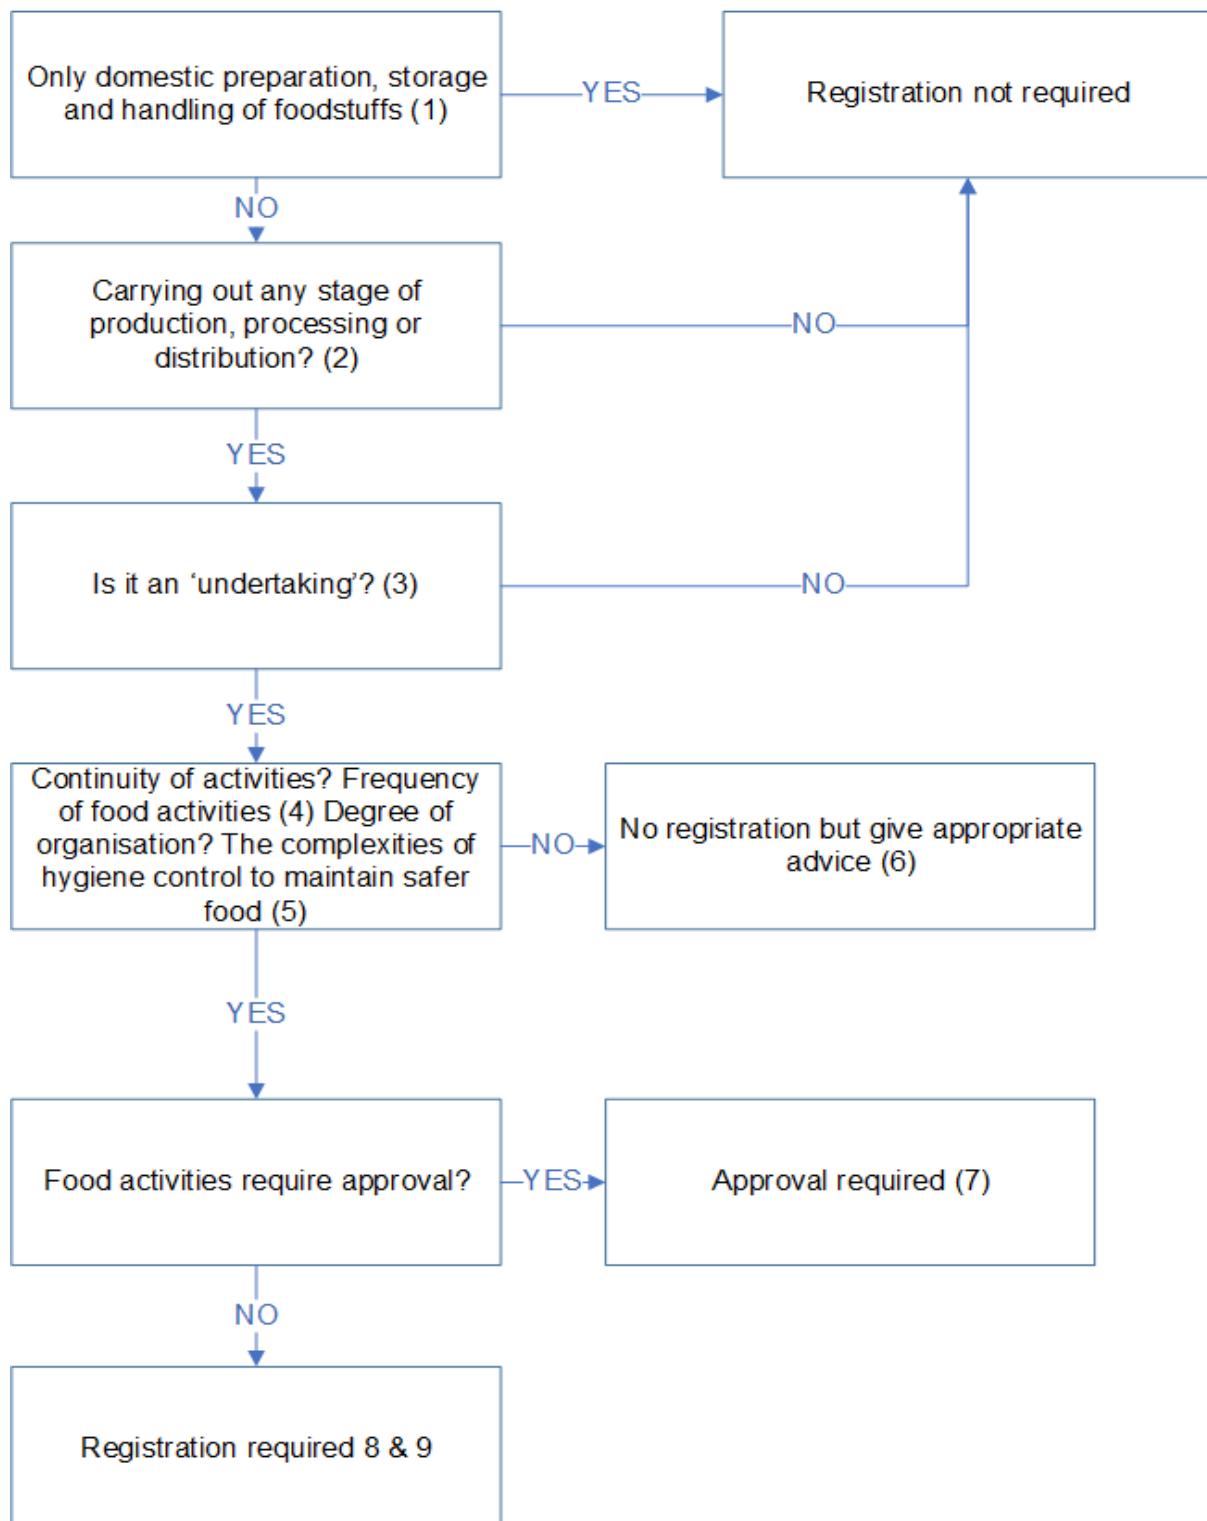

A2.2.3 Other exemptions

Article 1(2) of Regulation (EC) No 852/2004 set out the circumstances under which the requirement to register under article 6(2), would not apply, namely:

- primary production for private domestic use
- the domestic preparation, handling, or storage of food for private domestic consumption
- collection centres and tanneries which fall within the definition of food business only because they handle raw material for the production of gelatine or collagen

A2.2.4 Registration flow chart

Figure 2 provides a decision tree to help determine which food activities require registration with the Competent Authority.

Figure 2

Explanatory notes:

1. regulations do not apply to primary production for private domestic use or to the domestic preparation, handling, or storage of food for private domestic consumption⁵³
2. this means any stage, including import, from and including the primary production of a food, up to and including its storage, transport, sale, or supply to the final consumer⁵⁴
3. when considering undertaking it is recommended that CAs take account of the scale of the food business operation
4. continuity of activities – operations that are one off event may be considered as not having continuity of activity
5. degree of organisation – The FSA's view is that the foodstuffs, their risk and the nature of the event are considered when deciding how much any given operation can be said to be organised
6. Competent Authorities advise that if food operations change, they are contacted to check whether registration is subsequently required
7. [approvals guidance](#) is available on the FSA's communications platform
8. guidance and online registration can be found on the [FSA website](#).

A2.2.5 Action on receipt of a completed registration

On receipt of a completed registration form, it is recommended that Competent Authorities record the date of receipt. Where any activities indicated on the form fall outside of their enforcement remit, it is recommended the relevant Competent Authority be notified as soon as practicable.

For LAs on the RAFB service the date of receipt will be recorded automatically by the system.

Competent Authorities enter relevant information from the registration form onto their database of registered food business establishments. The registration form is then placed on a file (electronic or otherwise) in respect of each food business establishment.

If an establishment is undertaking any activity which could be deemed high risk, this is taken into account when prioritising initial official controls.

Competent Authorities keep application forms relating to establishments in a format that maintains their admissibility as evidence if required.

⁵³Article 1(3) of Regulation (EC) No 178/2002 and Article 1(2)(b) of Regulation No 852/2004

⁵⁴ Article 3(16) of Regulation (EC) No 178/2002

If any information is omitted from a registration form submitted by an FBO, the Competent Authority either makes contact with the FBO to obtain the missing information or, if a substantial amount of information is missing, return the submission to the FBO for full completion.

On receipt of a completed application form, Competent Authorities carry out an initial official control, if required, having regard to chapter 4 of the Code.

A2.2.6 Acknowledgement of registration

It is recommended that Competent Authorities acknowledge receipt of a submitted food business registration, and that this confirmation includes a reminder to the FBO to advise the Competent Authority of any subsequent changes to the business, in accordance with article 6(2) of Regulation (EC) No 852/2004.

Where a Competent Authority is using the RAFB service, acknowledgement of an application to register by an FBO is sent automatically by the service. The Competent Authority may wish to send their own acknowledgement in addition.

A2.2.7 Changes to food establishment operations

Under article 6(2) of Regulation (EC) No 852/2004, FBOs are required to ensure that the appropriate Competent Authority always has up-to-date information on their food establishment(s) and notify their registering Competent Authority of any significant changes to the operation and closure.

This requirement includes changes to both the operation and the operator.

Significant changes are considered to include changes in, or ceasing of:

- food activities
- ownership
- changes to the details previously supplied

A2.2.8 Change of ownership following registration

Competent Authorities may come across changes of ownership during interventions at food business establishments. The FBO by virtue of article 6(2) of Regulation (EC) No 852/2004 is required to notify the Competent Authority of any significant changes, which includes change of ownership. Not complying with this requirement is an offence under regulation 17 of The Food Hygiene (Wales) Regulations 2006.

The table below outlines circumstances in which changes of ownership have been identified and therefore a new registration form would need to be completed by the FBO.

Table 7 – Change of FBO scenarios – when a new registration is required.

Existing FBO (as stated in registration document)	Change of FBO (assuming no other changes to the business)	Comments	New registration required?
Sole trader, Partnership, or incorporated company (for example Ltd, PLC)	Different sole trader, partnership or incorporated company takes over ownership	Discontinuation of operator/s	Yes
Sole trader or Partnership	Company incorporated (and registered), sole trader or partner/s become Director/s	Creation of a company changes the legal matrix of FBOs	Yes
Sole trader	Creation of a partnership where the sole trader is one of the partners	Continuation of operator	No, but MIS should be updated
Partnership	Dissolved and one of the partners takes over sole ownership as a sole trader	Continuation of operator	No, but MIS should be updated
Partnership	New partner joins or a partner leaves, as long as there is a continuation of at least one partner	Continuation of operator	No, but MIS should be updated
Incorporated company	Company goes into administration and run as a going concern by administrators	Discontinuation of operator/s	Yes
Incorporated company in administration	Company taken over from administrators by a different sole trader, partnership, or incorporated company	Discontinuation of operator/s, registration expires	Yes

Existing FBO (as stated in registration document)	Change of FBO (assuming no other changes to the business)	Comments	New registration required?
Sole trader, Partnership, or Incorporated Company	Bankruptcy, insolvency or in liquidation (wound up/dissolved)		Not applicable

It is recommended that other business types such as co-operatives, registered charities, and other specialised types of organisation (for example, establishments under the control of a board/committee) are treated on a case-by-case basis to identify the natural person or legal person required to ensure that food law is complied with within the food business under their control.

Competent Authorities need to determine if anything in practice has changed at the food business establishment or if there is solely an administrative change and determine if a new risk rating intervention is appropriate. It is recommended that decisions are made on a case-by-case basis as to whether a new registration would prompt an intervention and subsequent risk rating.

A2.3 Multisite and satellite operations

A2.3.1 Single registration for multiple linked establishments

There are circumstances where a single registration, under the same FBO, is permissible for what is considered to be a single food business operating at multiple sites. In these circumstances, authorised officers may prefer to consider separate sites and/or locations as part of one establishment for the purposes of registration under article 6 of Regulation (EC) No 852/2004 and therefore one intervention rating in accordance with chapter 4.

In these situations, it would need to be made clear to the FBO that non-compliance at one site, may result in the downgrading of the overall rating (both intervention and FHRS ratings) of the entire operation.

This flexibility has the effect of extending the retail exemption from approval for smaller food businesses where the production of POAO based products and the retail element (meaning the place or point of supply to the final consumer) are not at the same 'site', but there is a strong association between sites, to the extent that all sites are essentially operating as one business. It can also apply to operations where none of the sites would require approval but could reduce the need for multiple registrations.

This flexibility may only be applied where the main focus of the wider establishment's activities is that of a retail business, that is when the supply of food is direct to the final consumer.

It is recommended that Competent Authorities consider such businesses on a case-by-case basis to ensure that the operation meets the criteria of a single food business establishment and satisfy the following criteria:

- all sites covered by the flexibility are under the control of the same FBO
- one food safety management system covers all sites and the operations undertaken at those sites
- all of the sites covered by the flexibility are located within close enough proximity that they can be considered part of one establishment that is subject to one set of official controls meaning that when due an inspection, all sites must be covered by that inspection as they are all part of one establishment. For this reason, it is recommended that the flexibility is only applied to establishments within the same Competent Authority area.

Where one or more of the criteria laid out above cannot be met, the flexibility cannot be applied, and each site would be registered or approved in the normal way.

Where the main activity of the establishment is the supply of POAO to other businesses, refer to the [Approval of Establishments: Guidance for Local Authorities](#).

A2.3.2 Enforcement and oversight of multi-sites operating under a single registration

Due to the practicalities of an officer maintaining the necessary ongoing oversight and assessment of such set-ups operating under one registration, it is recommended that this flexibility is only applied to establishments within the same Competent Authority area.

This flexibility is discretionary and will require authorised officers to assess on a case-by-case basis whether a business meets the single food establishment criteria. It is recommended that a record of the assessment and the supporting reasons are recorded on the relevant establishment files.

The FBO has the option not to adopt this arrangement and make a request to the Competent Authority for separate registration and/or approval of each site.

A2.3.3 Examples of when single food establishment registration may apply

These examples are in no way prescriptive or exhaustive and are for illustrative purposes only.

Example 1 - Catering for satellite sites

A catering establishment or 'hub kitchen' that doesn't have a servery on site but prepares food to be transported to one or more local retail outlets, or 'satellite kitchens' operated by the same FBO, to be served directly to the final consumer with no onward distribution. Providing all the hub and satellite kitchens are covered by the same food safety management system and all satellite kitchens are in close enough proximity to be covered by the same official control, they can be registered as one establishment.

Example 2 - Supply to retail outlet

A small manufacturing unit which produces speciality cheese to sell in its nearby high street deli shop. The same FBO operates both sites, which retail to the final consumer. The FBO has developed a food safety management system for the speciality cheese, which flows from production through to service at the deli (retail outlet). Given there is one FBO and one food safety management system, providing the manufacturing unit and retail shop were in close enough proximity to be covered by the same official control intervention, they can be registered as one establishment.

Note: If the flexibility is not applied, the manufacturing unit would need to be considered for approval. Please refer to [Approval of Establishments: Guidance for Local Authorities](#) for further advice.

Example 3 - Multi-units on the same site

- a) motorway services: Several non-branded food retail units at a motorway service station, including a coffee shop, snack bar, and a restaurant that are all operated by one FBO. All food supplied to the units is prepared in a central kitchen located on-site or bought in through the company's approved supplier list. One food safety management system covers all units
- b) motorway services: A branded coffee chain which has a main coffee shop, plus two fixed smaller satellite units inside the service station and a mobile vehicle which operates at the service station site. All are operated by the same FBO and operate under the same food safety management system
- c) superstore: A large supermarket which supplies its own on-site petrol station with pre-packed food. Transfer, storage and display of food at the petrol station are accounted for in the food safety management system for the store and both are operated by the same FBO

A2.3.4 Examples of when single food establishment registration may not apply**Example 1 - Catering for satellite sites**

A catering company manufactures a variety of foods and supplies to two restaurants. Although the same FBO operates both restaurants, further food production activities take place at each restaurant requiring each site to have a separate food safety management system to adequately manage on-site risks. As all sites are not operating under a single food safety management system, the criteria are not met and the flexibility cannot be applied.

Example 2 - Supply to retail outlet

A bakery supplies freshly baked food products such as meat pies to various retail outlets located in different LA areas. The producing bakery and all retail outlets

are operated by the same FBO and one food safety management system is in place across all sites. While one FBO and one food safety management system is in place, the sites are not close enough in proximity to be considered as a single food business establishment that can be covered by the same official control intervention. Therefore, the flexibility cannot be applied.

A2.4 Movable food business establishments

The following sections refer to food establishments that move between fixed locations and usually via scheduled routes.

Although ocean-going ships, aircraft, trains, and long-distance coaches are subject to the provisions of Regulation (EC) No 852/2004; their movable nature generally means that there is little practical value in the registration of individual vehicles with UK Competent Authorities, as they are not always present in the same area of jurisdiction. The following sections outline the arrangements for the registration of movable establishments.

A2.4.1 Ships and vessels

FBOs are required to register vessels under their control that meet the definition of a food business establishment unless they require approval (such as freezer and factory and reefer vessels). This includes:

- vessels that are permanently moored in the UK (floating restaurants)
- vessels that are engaged for the purposes of catching, gathering and distribution of food
- passenger vessels that ply their trade on inland water ways and travel the same routes, never leaving territorial waters for example cross channel ferries, river ferries and pleasure craft

If the vessel routinely calls at more than one UK port, the 'registering authority' is usually the PHA where the vessel has its 'home port' as a registered vessel with the MCA

A2.4.2 Aircraft

Airlines and in-flight caterers that are food businesses would register with the most appropriate Competent Authority. This is usually the Competent Authority or PHA within which company policy and management decisions on food safety are made.

A2.4.3 Trains and coaches

Train and coach operating companies that are food businesses would register with the most appropriate Competent Authority. This is usually the Competent Authority within which company policy and management decisions on food safety are made.

Individual trains and coaches are not subject to separate registration, but the FBO would need to register any other establishment or static unit undertaking activities of the food business.

It is recommended that registering Competent Authorities for the main establishment inspect a representative number of train cars providing foodstuffs (such as buffets and dining cars), where the food service units across the stock are of similar design and operate to common food safety management procedures. Where main establishments and train operations (which provide food) are co-located, the registering Competent Authority itself can undertake these inspections.

A2.4.4 Markets

In the case of vehicles and stalls (whether or not these facilities are provided by the market controller) used for transporting, preparing or selling of food to consumers within the area of a market, the FBO would register the establishment with the Competent Authority in which their food stocks are ordinarily stored.

A2.5 Mobile food establishments

The following sections refer to food establishments that have the mobility to trade in more than one location, other than those movable food establishments described in section A2.4.

A2.5.1 Registration requirements

Mobile food establishments FBOs are required to register with the Competent Authority (the registering Competent Authority) within which the establishment is ordinarily kept or returns to between trading. For example, the private residence house of the owner of the mobile food establishment.

Once registered, it is recommended that the FBO is not asked to register with any other Competent Authority in whose area it trades.

A2.5.2 Competent Authority responsibilities

Competent Authorities are responsible for carrying out official controls of the activities undertaken by a mobile establishment that operates in their area.

It is recommended that the Competent Authority undertaking the official control contacts the registering Competent Authority before any intervention to:

- seek up to date information regarding the establishment
- determine whether an official control is due
- if an official control is due, the type of methods and techniques that may be appropriate in the circumstances (for example full inspection, partial inspection, or audit)

The registering Competent Authority has the discretion to decide whether it needs to undertake any specific official controls, for example in circumstances, where full inspection has been carried out by a Competent Authority in whose area the mobile establishments operate.

To ensure consistency and to avoid the establishments receiving an excessive number of official controls, the Competent Authority undertaking the official control would provide the registering Competent Authority with information relating to official control(s) undertaken on mobile establishments operating in their area.

It is recommended that details of official controls and enforcement action are passed to the registering Competent Authority as soon as possible. The registering Competent Authority would take account of the information supplied when revising the establishments risk rating, in accordance with chapter 4 of the Code, and be recorded on the Competent Authorities database of food establishments.

A2.5.3 Transfer of responsibility between Competent Authorities

In some circumstances, the mobile food business establishment may never trade in the registered Competent Authorities area, so it may be more appropriate, for another Competent Authority to undertake responsibility for the risk rating of the mobile establishment. It is recommended that the transfer of responsibility only occurs with the agreement of both Competent Authorities.

In these cases, the Competent Authority that has accepted responsibility for the risk rating, will be responsible for determining the minimum official control frequency for that establishment.

The confirmation of any such agreement would be made in writing and the registering Competent Authority record on file that an agreement is in place.

If the registering Competent Authority receives any requests for information on the establishment, they can refer these to the responsible Competent Authority.

A2.5.4 Best practice arrangement for rating mobile food establishments

Competent Authorities may use the following arrangements as best practice when awarding ratings (both risk rating and FHRs) for mobile food businesses in their area.

- **registered and operating within the same Competent Authority** - the registering authority undertakes official controls, and rates the unit for FHRs
- **registered in one Competent Authority but trading primarily in another Competent Authority area** - the Competent Authority undertaking the official control would liaise with the registering Competent Authority and propose the following arrangement:
 - the registering Competent Authority would be responsible for dealing with any appeals against ratings, requests for re-rating inspections and requests to publish a 'right to reply'
 - the registering Competent Authority may continue to undertake official controls, but not score the unit for FHRs to avoid duplication (the reasons for this are that the public are more likely to search the FHRs website for food businesses at their trading address and the registering Competent Authority may not have seen the food business operating)
 - the Competent Authority undertaking the official controls when the mobile food establishment is trading forwards a copy of the 'report of the official control' to the registering Competent Authority

- if/when they carry out an official control the registering Competent Authority forwards a copy of their report to the Competent Authority where the mobile food establishment primarily trades, so that account can be taken of this when calculating the FHRs rating
- **registered in one Competent Authority but trading at a number of different sites across a number of Competent Authorities -**
 - the registering Competent Authority would, if possible, undertake an official control of the unit and score for FHRs
 - if this were not possible, the registering Competent Authority would record the findings of the Competent Authority undertaking the official control(s) and issue the food hygiene rating accordingly
 - it would remain the responsibility of a Competent Authority undertaking an official control to liaise with the registering Competent Authority and to forward a copy of any 'report of official control' to avoid duplication, where possible.

A2.5.5 Mobile food business with multiple units

Where a food business operates more than one mobile establishment, it is recommended that Competent Authorities consider whether it is appropriate to register the business as one single establishment (such as where there is a single 'controlling mind') or register each individual mobile establishment, taking into account the criteria in section A2.3.1. Only when all three criteria are met, is a single food business registration appropriate.

A2.5.6 Risk rating of mobile establishments

Competent Authorities risk rate mobile establishments registered with them when they are due and do so based on their own official controls and a consideration of information provided by other Competent Authorities who have undertaken appropriate official controls. Where possible, the risk rating would be based on official controls that include observations of the business in operation.

A2.6 Other types of establishments

A2.6.1 Food businesses operating out of domestic premises such as home caterers and B&Bs

The domestic preparation, handling or storage of food which is to be placed on the market (whether free of charge or not) and which meets the definition of a 'food business', is subject to registration requirements and would need to be registered with the Competent Authority where the undertaking takes place.

A2.6.2 Domiciliary care/assisted living care

Food business registration will apply where it is considered that the care service operations fall within the legal definition of a 'food business'. If registration is required, then the establishment itself would need to be registered even if some operations carried out do not need to form part of the registration, for example, in the

scenario where a residential home has both clients who carry out domestic preparation and food handlers that prepare food on others behalf.

A2.6.3 Food banks

Food banks run by community volunteers, if they meet the definition of a food business, require registration, and need to comply with food law proportionately. Some food banks may be exempt from registration if they do not meet the definition of an 'undertaking' given in recital 9 of Regulation (EC) No 852/2004 and article 3(2) of Regulation (EC) No 178/2002.

A2.6.4 Food brokers

Food brokers are food businesses that operate as intermediaries in the supply chain, operating at various stages between other food businesses and the final consumer or caterer.

While they may arrange for the movement of food between suppliers or to retailers, they do not necessarily handle the food or even store it on their establishment (which may effectively be an office). Provided they meet the definition of 'food business' and 'FBO', then the registration requirement applies, and they would need to be registered with the Competent Authority where the food broker is located. In respect of POAO, article 3 of Regulation (EU) No 931/2011 on traceability requirements for food of animal origin, places a duty on the FBO, including food brokers, to be able to identify and provide specific traceability information to the Competent Authority.

[Guidance](#) for authorised officers on food brokers includes information on the distinction between food brokers and food agents, who act as a representative of a FBO without any authority to trade in their own name and do not take legal or physical possession or custody of the food at any time.

A2.6.5 Internet sales

Certain businesses offer their goods for sale via the internet. Although such trade is not specifically referred to in Regulation (EC) No 852/2004. If such businesses fall within the definition of a food business as outlined in Regulation (EC) No 178/2002 then relevant requirements of food law will be applicable to them.

Such businesses would need to register with the most appropriate Competent Authority. This may be where they live, where their office is located or where the food stocks are stored.

Food businesses such as those who set up websites providing caterers' menus to consumers, which facilitate sale of the food and arrangement of its delivery from caterer to consumer, may also need to be registered as food businesses.

[Guidance](#) for Competent Authorities regarding foods sold online can be found on the FSA's communications platform.

A2.6.6 Temporary food business establishments

Temporary food businesses or 'pop-up' food businesses are establishments that are only open for a limited period of time. The time they are open for can range from a few hours to a few months, depending on the nature of the food business. These

businesses are treated in the same way as mobile food establishments for the purposes of registration.

Competent Authorities would need to prioritise initial official controls of these businesses based on risk and in accordance with their service plan and official control programme.

A2.6.7 Vending machines

Vending machines are subject to the relevant provisions of annex II of Regulation (EC) No 852/2004. The FSA does not see practical value in the registration of individual vending machines or the establishment on which they are sited if the only food related activity on those establishments relates solely to vending machines for low-risk products. For higher risk products Competent Authorities should consider the risks and take the appropriate action.

However, distribution centres where food for stocking vending machines is stored and/or from which food is transported to vending machines for stocking would need to be registered with the relevant Competent Authority. The delivery vehicles used for the transport of food for stocking vending machines would be covered in the official controls at such establishments.

A2.6.8 Non-commercial establishments

Food activities which do not operate from primarily commercial premises but meet the definition of a 'food business', would need to be registered as a food business establishment. This may include, for example, a food business operating from domestic premises, primarily used as a dwelling.

Annex 3: Guidance on section 4 of food hygiene intervention rating scheme

A3.1 Level of (current) compliance - food hygiene and safety procedures

Score	Description in Food Law Code of Practice	Description of what the score might be expected to look like in practice
25	Almost total non-compliance with statutory obligations	<ul style="list-style-type: none"> evidence of almost total non-compliance with legal requirements imminent and serious risks follow-up action by the CA in accordance with its enforcement policy using a graduated approach to include a warning letter and revisiting the establishment within a short timescale to secure compliance. This should include consideration of prohibition procedures where there is imminent risk very poor food hygiene practices, serious food contamination risks, inadequate temperature control for high-risk foods and major improvement needed in all areas. almost total non-compliance in food hygiene and safety procedures (e.g. evidence of actual cross-contamination, food kept out of temperature control, fridge not operating at correct temperature) failure to apply any of (i.e. all) the control measures required to prevent cross-contamination almost total non-compliance with requirements for safe food preparation, cooking, re-heating, cooling or storage of food identified evidence of almost total non-compliance with the compliance elements of industry guides to good hygiene practice (that have been recognised formally by the FSA) on food handling practices and procedures, staff personal hygiene and temperature control
20	General failure to satisfy statutory obligations – standards generally low	<ul style="list-style-type: none"> evidence of major and widespread non-compliance with legal requirements in relation to food hygiene and safety procedures widespread and significant risks

Score	Description in Food Law Code of Practice	Description of what the score might be expected to look like in practice
		<ul style="list-style-type: none"> follow-up action by the CA in accordance with its enforcement policy using a graduated approach to include a warning letter, and revisiting the establishment within a short timescale to secure compliance. This should also include consideration of formal enforcement action including remedial action notices and possible prohibition procedures where widespread and significant risks exist inadequate implementation of many of the control measures required to prevent cross-contamination major and widespread non-compliance with requirements for safe food preparation, cooking, re-heating, cooling or storage of food identified (e.g. inadequate cooking times) evidence of major and widespread non-compliance with the compliance elements of industry guides to good hygiene practice (that have been recognised formally by the FSA) on food handling practices and procedures, staff personal hygiene and temperature control
15	Some major non-compliance with statutory obligations – more effort required to prevent fall in standards	<ul style="list-style-type: none"> evidence of some major non-compliance with legal requirements in relation to food hygiene and safety procedures some significant risks identified follow-up action by the CA in accordance with its enforcement policy using a graduated approach but likely to include a warning letter, and revisiting the establishment to secure compliance. Consideration may also be given to formal enforcement action, for example, circumstances that may warrant the service of a Hygiene Improvement Notice follow-up action identified for food business operator – to address all identified non-compliances within stipulated timescale examples of non-compliance may include poor stock rotation or poor personal hygiene inadequate implementation of some of the control measures required to prevent cross-contamination

Score	Description in Food Law Code of Practice	Description of what the score might be expected to look like in practice
		<ul style="list-style-type: none"> some major non-compliance with requirements for safe food preparation, cooking, re-heating, cooling or storage of food identified evidence of some major non-compliance with the compliance elements of industry guides to good hygiene practice (that have been recognised formally by the FSA) on food handling practices and procedures, staff personal hygiene and temperature control
10	Some non-compliance with statutory obligations and industry codes of recommended practice. Standards are being maintained or improved	<ul style="list-style-type: none"> evidence of some non-compliances that are not critical to food safety (i.e. are not significant but may become significant if not addressed) but overall generally satisfactory standard of compliance with legal requirements. not likely to put consumers at unacceptable risk in relation to hygienic food handling, temperature control and staff personal hygiene but may do so if non-compliances not addressed follow-up action by the CA in accordance with its enforcement policy but likely to be considering informal action (report of inspection/letter identifying issues). Establishment unlikely to be a priority for a re-visit some follow-up action identified for food business operator (in relation to issues that are not critical to food safety and not likely to put consumers at unacceptable risk but which may do so if not addressed) in relation to food handling practices and procedures, staff personal hygiene or temperature control standards being maintained or improving some lapses in food hygiene and safety procedures identified (e.g. high-risk food held under refrigeration generally below 8°C but some evidence of rising above such as when busy, some lapses in monitoring of critical control points) adequate control measures in place to prevent cross-contamination. Generally satisfactory food preparation, cooking, re-heating, cooling and storage of food demonstrated but some lapses may be evident over short periods

Score	Description in Food Law Code of Practice	Description of what the score might be expected to look like in practice
		<ul style="list-style-type: none"> evidence of generally satisfactory compliance with the compliance elements of industry guides to good hygiene practice (that have been recognised formally by the FSA) on food handling practices and procedures, staff personal hygiene and temperature control
5	High standard of compliance with statutory obligations, industry codes of recommended practice and minor contraventions of food hygiene regulations	<ul style="list-style-type: none"> evidence of very good compliance with legal requirements, with only some minor non-compliances that are not critical to food safety no follow-up action by local authority apart from report of inspection provided to food business operator. No re-visit necessary before next planned intervention only minor follow-up action identified for food business operator (in relation to issues that are not critical to food safety) in relation to food handling practices and procedures, staff personal hygiene or temperature control only minor lapses in food hygiene and safety procedures (e.g. some protective clothing not very clean and needs cleaning) all necessary control measures in place to prevent cross-contamination. Safe food preparation, cooking, re-heating, cooling and storage of food demonstrated evidence of very good compliance with the compliance elements of industry guides to good hygiene practice (that have been recognised formally by the FSA) on food handling practices and procedures, staff personal hygiene and temperature control
0	High standard of compliance with statutory obligations and industry codes of recommended practice; conforms to accepted good practices in the trade	<ul style="list-style-type: none"> evidence of meeting legal requirements or exceeding legal requirements No follow-up action by CA apart from report of inspection provided to food business operator. No re-visit necessary before next planned intervention no follow-up action identified for food business operator in relation to food handling practices and procedures, staff personal hygiene, or temperature control all necessary control measures in place to prevent cross-contamination. Safe food preparation, cooking, re-heating, cooling and storage of food demonstrated

Score	Description in Food Law Code of Practice	Description of what the score might be expected to look like in practice
		Evidence of meeting or exceeding good practices in the trade and/or good practice requirements included in industry guides to good hygiene practice (that have been recognised formally by the FSA) in relation to food handling practices and procedures, staff personal hygiene, or temperature control.

A3.2 Level of (current) compliance – structural requirements

Score	Description in Food Law Code of Practice	Description of what the score might be expected to look like in practice
25	Almost total non-compliance with statutory obligations	<ul style="list-style-type: none"> • evidence of almost total non-compliance with legal requirements • imminent and serious risks • follow-up action by the CA in accordance with its enforcement policy using a graduated approach but likely to include consideration of prohibition procedures where there is imminent risk and ongoing formal enforcement action, and re-visits within a short timescale to secure compliance • follow-up action identified for food business operator - immediate and significant action required in respect of all serious risks. Address all other matters in relation to structural requirements including cleanliness, layout, condition of structure, lighting, ventilation, facilities within stipulated timescale • dirty establishment and equipment, major structural problems • insufficient space in which to operate safely • almost total non-compliance with structural requirements (e.g. problems with hot water supply or problems with drainage, absence of essential wash hand basin or sink, dirty establishment with old food debris on floors, dirt engrained on work surfaces) • evidence of current widespread pest infestation or totally unsatisfactory waste disposal provision • almost total non-compliance with the compliance elements of industry guides to good hygiene practice (that have been recognised formally by the FSA) in relation to structural requirements

Score	Description in Food Law Code of Practice	Description of what the score might be expected to look like in practice
20	General failure to satisfy statutory obligations – standards generally low	<ul style="list-style-type: none"> • evidence of major and widespread non-compliance with legal requirements • widespread and significant risks identified • follow-up action by the CA in accordance with its enforcement policy using a graduated approach but likely to include commencement of formal enforcement action, and re-visiting the establishment to secure compliance • follow-up action identified for food business operator – to address all identified non-compliances in relation to structural requirements including cleanliness, layout, condition of structure, lighting, ventilation, facilities, as a matter of urgency within stipulated timescale • poor standard of structural and equipment cleaning. Poorly maintained and in poor repair. Not all appropriate hand and equipment washing facilities provided • poor design layout that is likely to lead to cross-contamination and to food safety being compromised • major and widespread non-compliance with structural requirements (e.g. some structural disrepair or poor work surfaces, inadequate number of wash hand basins or sinks, accumulations of dirt). Evidence of current pest infestation or inadequate waste disposal provision • evidence of major and widespread non-compliance with the compliance elements of industry guides to good hygiene practice (that have been recognised formally by the FSA) in relation to structural requirements
15	Some major non-compliance with statutory obligations – more effort required to prevent fall in standards	<ul style="list-style-type: none"> • evidence of some major non-compliance with legal requirements • some significant risks • follow-up action by the CA in accordance with its enforcement policy using a graduated approach but likely to include a warning letter, and consideration of formal enforcement, and giving the establishment priority for re-visit to secure compliance

Score	Description in Food Law Code of Practice	Description of what the score might be expected to look like in practice
		<ul style="list-style-type: none"> follow-up action identified for food business operator – to address all identified non-compliances, in relation to structural requirements including cleanliness, layout, condition of structure, lighting, ventilation, and hand and equipment washing facilities, within stipulated timescale significant improvements needed in standard of structure, equipment cleaning, maintenance and repair, or hand and equipment washing facilities poor design layout potentially leading to cross-contamination and to food safety being compromised major non-compliance with structural requirements (e.g. may be damage to work surfaces, some significant dirt). Evidence of current pest activity or inadequate waste disposal provision evidence of some major non-compliance with the compliance elements of industry guides to good hygiene practice (that have been recognised formally by the FSA) in relation to structural requirements
10	<p>Some non-compliance with statutory obligations and industry codes of recommended practice. Standards are being maintained or improved</p>	<ul style="list-style-type: none"> evidence of some non-compliances that are not critical to food safety (i.e. are not significant but may become significant if not addressed) not likely to put consumers at unacceptable risk but may do so if non-compliances not addressed Follow-up action for CA in accordance with its enforcement policy but likely to be considering informal action (report of inspection/letter identifying issues) with establishment unlikely to be a priority for a re-visit some follow-up action identified for food business operator in relation to issues that are not critical to food safety (but which may become so if not addressed) in relation to structural requirements including cleanliness, layout, condition of structure, lighting, ventilation, facilities

Score	Description in Food Law Code of Practice	Description of what the score might be expected to look like in practice
		<ul style="list-style-type: none"> generally satisfactory standard of structural and equipment cleaning. Fairly well maintained and in reasonable repair. Appropriate facilities provided with some issues of non-compliance standards being maintained or improving some repairs may be required (e.g. some cracked and missing wall tiles near to a food preparation surface, evidence of food contact surfaces being thoroughly cleaned but some areas where cleaning inadequate and needs to be improved) evidence of satisfactory pest control (there may be minor pest proofing required but no evidence of pest activity) evidence of satisfactory waste disposal provision (tidy, lidded bins and adequate collection arrangements) evidence of generally satisfactory compliance with the compliance elements of industry guides to good hygiene practice (that have been recognised formally by the FSA) in relation to structural requirements
5	High standard of compliance with statutory obligations, industry codes of recommended practice and minor contraventions of food hygiene regulations	<ul style="list-style-type: none"> evidence of very good compliance with legal requirements, with only some minor non- compliances that are not critical to food safety no follow-up action by CA apart from report of inspection provided to food business operator. No re-visit necessary before next planned intervention only minor follow-up actions identified for food business operator (in relation to issues that are not critical to food safety) in relation to structural requirements including cleanliness, layout, condition of structure, lighting, ventilation, facilities only minor repairs required (e.g. a few cracked wall tiles in a non-critical area, a minor lapse in cleaning of a hard to reach/inaccessible area) evidence of adequate pest control and waste disposal provision
