Chapter 2.2 Ante-Mortem Inspection

Sections

1. Introduction	2
2. Procedures	9
3. Record keeping	29
4. Movements	34
5. Cleansing and disinfection for biosecurity	37
6. Annexes	49

1. Introduction

1.1 FSA role

1.2 FSA role: verification of FBO responsibilities

1.1 FSA roles

1.1.1 Purpose

The purpose of ante-mortem inspection is:

- to determine whether there is any sign of any condition which might adversely affect human or animal health
- to enable the Official Veterinarian (OV) to make the decisions as to whether the animal can be slaughtered for human consumption
- to inform possible adjustments during post-mortem inspection
- to determine whether any test should be carried out in relation to disease diagnosis or for residues of veterinary medical products
- to determine whether welfare has been compromised
- examination of food chain information

Particular attention should be given when zoonotic or notifiable diseases are a possible diagnosis.

1.1.2 Regulations

Ante-mortem inspection is covered by Regulation (EC) 853/2004 (Food Business Operator (FBO) duties) and Regulation (EU) 2017/625, Regulation, 2019/624 and Regulation 2019/627 (FSA requirements).

1.1.3 Inspection tasks

The OV must carry out the ante-mortem inspection.

Manual for Official Controls: Amendment 96

The Meat Hygiene Inspector (MHI) may assist the OV with some pre-slaughter tasks. In relation to ante-mortem inspection and welfare checks they can make an initial check and help with purely practical tasks.

The MHI must alert the OV to abnormal animals identified pre-slaughter.

1.1.4 Circumstances where ante-mortem inspection has been undertaken by an OV at the holding of provenance

Where the ante-mortem inspection has been carried out by an OV at the holding of provenance a MHI can undertake the ante-mortem inspection required in the slaughterhouse on all species when certain criteria are met, under the responsibility of the OV, for example, without the OV being present.

The MHI must alert the OV to abnormal animals identified pre-slaughter and the OV must then carry out the ante-mortem inspection.

MHIs cannot be involved in ante-mortem inspections in the following circumstances:

- animals have undergone emergency slaughter;
- animals suspected of having a disease or condition that may adversely affect human health;
- bovine animals from herds that have not been declared officially free of Tuberculosis (TB) or the officially free status of which has been suspended;
- bovine animals from herds and to ovine and caprine animals from holdings that have not been declared officially free of brucellosis or the officially free status of which has been suspended;
- in the case of an outbreak of animal diseases to animals coming from a region as defined in Article 2 of Council Directive 64/432/EEC in which animal health restrictions are applied;
- where animals are subject to stricter controls due to the spread of emerging diseases or particular diseases listed by the World Organisation for Animal Health.

Inspection and verification	By
Observing animals at unloading (random)	OV / MHI

Checks following ante-mortem at the holding of provenance	OV or MHI acting under the responsibility of the OV

Reference: Regulation (EU) 2019/624, Article 3, 2 and Article 5, 3 and Regulation (EU) 2019/627, Section 2, Article 11.

1.2 FSA role: verification of FBO responsibilities

1.2.1 Introduction

The FBO has a number of responsibilities that the FSA are required to verify are fulfilled. Informal or formal enforcement action may be necessary where these responsibilities are not met.

1.2.2 Ante-mortem inspection

The FBO must follow the instructions of the OV to ensure that ante-mortem inspection of every animal to be slaughtered is carried out under suitable conditions.

Regulation (EC) 853/2004, Annex III, Section I, Chapter IV, Paragraph 5

Regulation (EC) 853/2004, Annex III, Section II, Chapter II, Paragraph 1

Where animals are slaughtered without ante-mortem inspection, the OV must declare the meat from such animals unfit for human consumption in accordance with the requirements of Article 45(a) Regulation (EU) 2019/627.

Where the FBO refuses to dispose of the meat, see chapter 2.8 on 'Animal by Products (ABP)' section 5 on 'Enforcement'.

1.2.3 Ante-mortem inspection at the holding of provenance

The competent authority (FSA) may allow ante-mortem inspection of all species of animals intended for slaughter to be performed at the holding of provenance. This

Manual for Official Controls: Amendment 96

must be first agreed by the food business operator responsible for the holding of provenance and the FSA.

The following checks must be carried out at the slaughterhouse:

- on records or documentation at the holding of provenance, including verification of the food chain information;
- to ascertain if there is evidence or reason to suspect that the animals may contain chemical residues in excess of the levels laid down in legislation, or residues of forbidden substances;
- for signs indicating problems related to animal welfare, including excessive dirtiness;
- that they were fit for transport.

The animals fit for slaughter shall be properly identified and separated from other animals and sent directly to the slaughterhouse together with health certificate completed by the OV which can be found at annex 7.

Where animals are not slaughtered within three days from the date of issue of the health certificate then:

- where the animals have not been dispatched from the holding of provenance to the slaughterhouse, an additional ante-mortem inspection shall be carried out and a new health certificate shall be issued; or
 - where the animals are already on their way to or are at the slaughterhouse, the slaughter may be authorised as soon as the reason for the delay has been assessed, provided that the animals undergo an additional ante-mortem inspection in accordance at the slaughterhouse.
- In the case of farmed game where slaughter is carried out at a slaughterhouse, by way of derogation from the above, EU Countries may allow slaughter until 28 days from the date of the issue of the health certificate if:
 - only small quantities of the farmed game meat are directly supplied by the producer to the final consumer or to local retail establishments directly supplying to the final consumer; and
 - not more than 50 animals are slaughtered per year at the holding of provenance

Where farmed game is not presented for slaughter within 28 days the animals must be re-presented for ante-mortem inspection as described in the case of other animals above.

Manual for Official Controls: Amendment 96

Reference: Regulation (EU) 2019/624 Article 5.

Reference: Regulation (EU) 2019/624 Article 5 Paragraph 2(f) Health Certificate for animals that undergo ante-mortem inspection at the holding of provenance.

Reference: Regulation (EU) 2019/624 Article 6 Paragraph 5.

1.2.4 Cleanliness of the livestock

The OV must verify that the FBO is presenting animals that have a clean hide, skin or fleece, so as to avoid any unacceptable risk of contamination of fresh meat during slaughter.

Reference: Regulation (EU) 2019/627 Article 11, Paragraph 4.

1.2.5 Health status and identity

The FBO must have procedures in place ensuring that each animal or batch of animals accepted into the slaughterhouse:

- are properly identified
- are accompanied by the relevant information from the holding of provenance
- are not from areas under disease control with movement restrictions unless the Competent Authority (CA) so permits
- are clean
- are healthy, as far as the FBO can judge
- are in a satisfactory state as regards to welfare

If the FBO is aware of any animals that do not comply with any of the above then the OV must be notified.

Isolation facilities must be used for suspect animals.

Note: The AO must not complete the animal movement licences. This is an FBO responsibility.

Manual for Official Controls: Amendment 96

1.2.6 Welfare

The FBO complies with the requirements of: The Welfare of Animals at the Time of Killing (England) 2015, The Welfare of Animals at the Time of Killing (England) 2015 and Welfare of Animals (Transport) Order 2006 (as amended) (WATO) and immediately takes necessary corrective measure to prevent recurrence of any non-compliance.

1.2.7 Animals accepted at the slaughterhouse

The FBO only accepts animals that are alive into the slaughter establishments, with the exception of:

- animals that have undergone emergency slaughter outside the slaughterhouse (red meat)
- delayed eviscerated poultry, geese and ducks raised for the production of 'foie gras'
- animals (including farmed game, ratites and Bison) slaughtered at the place of production
- wild game

Note: (EC) 853/2004 permits bison to be slaughtered on farm in 'exceptional circumstances' such as those that would put human health or animal welfare at risk if the animal(s) were transported live.

1.2.8 Acceptance of animals slaughtered on farm

Any animals (including farmed game and bison) slaughtered on farm, must be inspected at ante-mortem by an OV as soon as practicable before the slaughter date.

Please note that the OV is a veterinarian designated by the CA to carry out specific official controls on holdings on its behalf.

The bodies must be accompanied by the relevant documents:

- Veterinary health certificate (see annex 7 of this chapter).
- FCI (see annex 2 of this chapter).
- Certificate of Competence (CoC) for emergency slaughter. Should the animal be intended for human consumption then the person that carries out the emergency slaughter must hold a CoC for these operations.

Manual for Official Controls: Amendment 96

Alternatively, a Veterinary Surgeon can slaughter an animal for human consumption as part of their professional duties in exceptional circumstances (as long as there is not conflict of interest).

Bodies of animals slaughtered on farm must be transported hygienically and without undue delay. If transport takes more than two hours, it should be under refrigeration.

If necessary, the animals may be eviscerated at the site of slaughter under the supervision of the OV.

Reference: (EC) 853/2004, Annex III, Section III point 3

Reference: Annex 2 on 'Additional food chain information for Cattle and Calves' and annex 7 on 'Health certificate for farmed game slaughtered at the holding' of this chapter.

1.2.9 Dead on arrival (DOA) and dead in lairage (DIL)

Bovines:

The FBO reports DOA and DIL bovines O48M of age to a collector (their normal collector or the National Fallen Stock Company (NFSCo) on 0845 054 8888). They will arrange for the body to be collected and tested for Transmissible Spongiform Encephalopathies (TSE).

1.2.10 Lairage period

In England and Wales, animals must be slaughtered without undue delay.

Reference: (EC) 853/2004, Annex III, Chapter IV, 6.

1.2.11 Movement from slaughterhouse

Animals are not removed from the slaughterhouse without the OV's permission and a licence issued by APHA.

Reference: Regulation (EU) 2019/627, Article 43.

2. Procedures

- 2.1 Ante-mortem inspection procedures
- 2.2 Specific ante-mortem issues for poultry
- 2.3 Suspect live animals
- 2.4 Emergency slaughter on farm
- 2.5 Slaughter of fractious animals (bovine)

2.1 Ante-mortem inspection procedures

2.1.1 Observations

The OV must observe each animal (except poultry) moving and at rest. The inspection must be sufficient to identify animals showing neurological symptoms, respiratory symptoms, alimentary tract abnormalities, change in gait, or external abnormalities.

Where there is a field lairage or buildings within the same CPH (County Parish Holding) number of the slaughterhouse then animals can move freely between the slaughterhouse lairage and the field lairage.

Where animals are held in fields or buildings associated with the slaughterhouse but which have a different CPH number the OV should under no circumstances carry out ante mortem inspection or any other Official duties in these areas. Animals cannot move from the slaughterhouse back to the field or buildings with a different CPH number.

2.1.2 Initial check

Routine ante-mortem inspection may begin with an initial check done by the MHI.

Where a suitably trained MHI assists the OV in carrying out the initial check, the OV should subsequently observe all the animals interacting with each other in their pens during ante-mortem inspection.

Manual for Official Controls: Amendment 96

The initial check, if undertaken by the OV, may suffice as to constitute an adequate ante-mortem inspection.

2.1.3 Clinical inspections

In addition to routine ante-mortem inspection, the OV is required to carry out a clinical inspection of all animals which do not appear to be 'normal' and those that the FBO or an MHI may have put aside.

Reference: See Topic 2.3 on 'Suspect live animals' for the procedure to be followed for suspect animals.

Note: Clinical inspection does not necessarily require the OV to undertake a clinical examination, although this should be undertaken if warranted.

2.1.4 Considerations

Two important variables must be taken into consideration by the OV when performing ante-mortem inspection:

- every slaughterhouse and lairage layout are different
- the OV may require different conditions for inspecting the different species

Consequently, the OV must explain their ante-mortem requirements to the FBO to ensure that appropriate facilities and access are available.

2.1.5 Facilities and equipment requirements

To be able to carry out satisfactory ante-mortem inspections, clinical inspections and detailed examinations, the OV must have available the following facilities and equipment:

- adequate lighting
- adequate space
- adequate access
- adequate separate facilities for detailed examination (a crush or equivalent is desirable but not legally required – the OV should arrange suitable facilities with the FBO)
- isolation pen(s) for suspect animals with separate drainage and situated as to avoid contamination of other animals (not needed in all establishments)

Manual for Official Controls: Amendment 96

- staffing assistance (for handling or restraint)
- sufficient time
- proper equipment, for example, thermometer and stethoscope

2.1.6 Time of ante-mortem inspection

The inspection must take place within 24 hours of arrival at the slaughterhouse and less than 24 hours before slaughter. Where ante-mortem is carried out at the holding of provenance then it must be undertaken within 3 days of the animals being slaughtered or in the case of farmed game, where this has been authorised, within 28 days of slaughter.

In some cases, ante-mortem inspection may need to be repeated. The OV may inspect the animal(s) at any other time.

Reference: Regulation (EU) 2019/627, Section 2, Article 11, Paragraph 2.

2.1.7 Exception to OV ante-mortem inspection at the slaughterhouse

OVs must carry out ante-mortem inspection at the slaughterhouse except in the following situation:

- An appointed OV has carried out ante-mortem inspection at the holding of provenance and the Food Chain Information (FCI) has been received by the FBO where additional checks will be carried out and may be conducted by a meat hygiene inspector as described in paragraph 1.1.3 above.
- The MHI is satisfied that the:
 - FCI does not point to any possible problem for food safety
 - checks indicate the animal's welfare has not been compromised
 - the MHI has checked the health certificate and found it to be satisfactory
 - the OV must ensure, through regular checks that the MHI is carrying out such actions properly.

Note: Animals that have undergone ante-mortem at the farm by an appointed OV must come with a health certificate.

Manual for Official Controls: Amendment 96

Reference: Specimen health certificate for live animals as set out in Part I of Annex IV to Implementing Regulation (EU) 2019/628.

Note: The MHI must have undergone required training in these duties before undertaking this work.

2.1.8 Emergency slaughter at the slaughterhouse

If an animal has an accident in a slaughterhouse, it must have veterinary ante-mortem inspection either before or just after the accident in order for it to be slaughtered for human consumption. To protect animal welfare where such an accident occurs out of hours, and the OV is not available, the ante-mortem inspection may be carried out by an appointed OV.

The OV must complete and sign the certificate for emergency slaughter.

The FBO is responsible for any costs incurred in such a circumstance; the carcase and all body parts must be retained for cold inspection by the OV.

Meat from animals that undergo slaughter following an accident in a slaughterhouse may be used for human consumption if:

- the animal had a veterinary ante-mortem inspection either before or after the accident
- the post-mortem inspection is performed personally by the OV
- at post-mortem inspection, no serious lesions other than those due to the accident are found
- a bovine is over O48M, TSE testing will be required (including bison)

Meat is to be declared unfit for human consumption if it derives from animals that have not undergone ante-mortem inspection, except for hunted wild game.

See sub-section 2.4 on 'Emergency slaughter on farm' for more information.

Reference: Regulation (EU) 2019/627 Articles 16, 45(a) and 47.

2.1.9 FBO responsibility

The FBO shall ensure that any animal that has experienced pain or suffering during transport or following arrival at the slaughterhouse is slaughtered or killed immediately.

Reference: WATOK Part 3 paragraph 12 (a) Schedule 1.

Manual for Official Controls: Amendment 96

2.1.10 FCI

When the FBO passes FCI to the OV, the OV should use their professional judgement and take into account the information provided when performing ante and post-mortem inspection.

Reference: See chapter 2.1 'FCI and CCIR' for additional information.

For Pigs

When FCI and / or other data (from farm of origin or ante-mortem inspection) indicates possible risk to public health, animal health or animal welfare, the OV can instruct the FBO to mark / identify those animals for further inspection procedures (FIP) at post-mortem inspection to decide if the meat is fit for human consumption.

Reference: Regulation (EU) 2019/627 Article 10, Paragraph 1.

2.1.11 Examples: pig conditions in ante-mortem justifying FIP at post-mortem

For the majority of the conditions listed on the current ante-mortem inspection sheet there would be no need for pigs to be marked to undergo FIP at post-mortem.

However, the following may justify FIP:

- mastitis (if associated with general signs)
- moribund / recumbent
- orchitis (marked to consider *brucella*, occupational zoonoses)
- suspect emaciation, poor condition
- suspect fever
- slaughtered in lairage
- gathering of evidence for enforcement purposes (welfare breach suspect)

Note: the OV is not limited to these conditions and should use their professional judgement.

Manual for Official Controls: Amendment 96

2.1.12 Cleanliness of animals for slaughter

The OV must verify that the FBO complies with his duty to slaughter only animals that are sufficiently clean and record the details, if in their opinion the animals are too dirty to be processed hygienically.

The procedures in place to deal with animals that are soiled and the ability of the FBO to process those animals must be taken into consideration.

Reference: Regulation (EU) 2019/627, Articles 11(4) and 43(2).

2.1.13 Ante-mortem inspection records

Legislation requires the FSA to keep records of ante-mortem inspection.

Reference: Regulation (EU) 2019/627 Article 39(1).

Reference: See topic 3.4 on 'Use of ante-mortem inspection records' for details of where to record ante-mortem inspection results.

2.1.14 When animals can be moved from lairage to slaughter

The OV must be satisfied that an effective positive release system is in operation to ensure that every animal that requires ante-mortem inspection:

- receives it when it is required
- is only slaughtered for human consumption when ante-mortem inspection has been carried out and has been passed fit for slaughter

Animals must not be moved from the lairage to be slaughtered for human consumption until:

- ante-mortem inspection has been completed, recorded and signed by the OV, and
- any conditions for suspect animals have been met

2.1.15 Disease eradication programmes

The OV is to impose the conditions, already determined by the CA, for slaughtering animals under schemes for the control of:

- a specific disease, such as brucellosis or TB

Manual for Official Controls: Amendment 96

- zoonotic agents such as salmonella

to permit taking more precautionary hygiene measures and allow a more thorough post-mortem inspection.

Manual for Official Controls: Amendment 96

2.1.16 Ante-mortem inspection summary

The flowchart below summarises the procedure for ante-mortem inspection.

2.2 Specific ante-mortem issues for poultry

2.2.1 Ante-mortem inspection of poultry

A) When ante-mortem inspection is carried out at the holding of provenance:

When poultry arrives accompanied by a Health Certificate for live animals transported from the holding to the slaughterhouse, full OV ante-mortem inspection at the slaughterhouse is not required. In that case, ante-mortem inspection at the slaughterhouse can be performed by a suitably trained MHI under the responsibility of the OV. Inspection is to verify:

- animal identification
- animal welfare
- any condition that may adversely affect human or animal health

When the birds are not slaughtered within three days of the issue of the Health Certificate, the following should take place:

- birds that have not left the holding must be re-examined and a new Health Certificate issued
- birds that have arrived at or are en route to the slaughterhouse may be slaughtered for human consumption after they have passed an ante-mortem inspection performed by the OV

Reference: Regulation (EU) 2019/624 Article 5 and MOC 2.1.7 above.

Reference: Regulation (EU) 2017/625 Article 18(2)(a).

B) When ante-mortem inspection is not carried out at the holding of provenance:

Birds shall be subjected to ante-mortem inspection at the slaughterhouse. When doing ante-mortem inspection the OV must:

- assess the overall health and welfare of the birds
- listen to the birds and observe a random sample checking posture, wattle colour and cleanliness, and
- consider the information available from the FCI

Ante-mortem inspection at the slaughterhouse can be limited to a representative sample of birds from each flock.

Manual for Official Controls: Amendment 96

Under Regulation (EC) No 2160/2003 ‘flock’ means all poultry of the same health status kept on the same premises or in the same enclosure and constituting a single epidemiological unit; in the case of housed poultry, this includes all birds sharing the same airspace. In practical terms this equates to “a group of birds reared in the same house within the same farm. For birds not confined solely to a house a flock is equivalent to a group of birds that share physically a designated area.”

When ante-mortem is limited to a representative sample from the flock, the OV, **as a minimum**, must perform ante-mortem inspection of the first load from each flock arriving to the slaughterhouse. That means that if more than one load of poultry from the same house arrives to the slaughterhouse on the same day, the OV must inspect at least the first lorry for that flock or, if the first lorry contains less than 500 birds¹, a number of lorries until ante-mortem has been carried out on at least 500 birds from the flock.

If another load of birds from the same house is sent for slaughter the following day, the OV is required to carry out ante-mortem inspection of at least the first load from that house that day (or several lorries until ante-mortem has been carried out on at least 500 birds from the flock). This is because ante-mortem inspection in the slaughterhouse must take place less than 24 hours before slaughter and the conditions of the flock might change within that period of time.

The OV can carry out ante-mortem inspection of more than one load per house per day as and when needed or considered necessary by them, particularly in cases where the FCI or ante-mortem checks on the first load raise possible public health, animal health or animal welfare concerns for a given flock. Each establishment will be required to develop a positive release system agreed between the FBO and the OV to ensure the required sample of birds has received ante-mortem inspection prior to slaughter.

Routine welfare checks carried out by the OV or the OA should be spread out to ensure that loads that have not been subjected to ante-mortem inspection are also covered by those welfare checks.

Details of the systems in place to carry out ante-mortem inspection of a representative sample of birds from each flock should be agreed between the OV

¹ *The selection of minimum 500 birds follows EFSA’s advice in Opinion on poultry meat inspection:*

Indicating high level batch sensitivity to detect disease and conditions at sample size of 500 and informing that Ante-mortem inspection (if used correctly) has a relatively high probability of detecting most diseases and conditions in infected batches

<https://www.efsa.europa.eu/en/efsajournal/pub/2741>

Manual for Official Controls: Amendment 96

and the FBO and should be documented for the benefit of other officials attending the plant. It is recommended that a Standard Operating Procedure (SOP) is developed by the FBO in agreement with the OV.

The SOP (or any chosen documented form) must detail the positive release system agreed with the FBO, the systems put in place by the OV to ensure that welfare checks undertaken by the OV/OA are spread out to include loads that have not received ante-mortem inspection and actions to be taken if ante-mortem of the first load, or subsequent checks indicate welfare issues or disease concerns (for example, inform the FBO that the number of checks for a particular flock are going to increase to ensure the positive release system is consequently adapted). The SOP should be reviewed regularly and as often as necessary.

If there is an outbreak of a notifiable disease in poultry (such as Avian Influenza or Newcastle Disease), the OV will need to check all poultry arriving to the slaughterhouse when this has been designated for processing birds from the controlled zones (level 1 and/or level 2). AMI in these cases cannot be limited to a representative sample of birds from each flock. Refer to Annex 25 in Chapter 6 of the MOC.

Reference: Regulation (EU) 2019/627 Articles 2(21) and 11(1)

Reference: Regulation (EC) 2160/2003 Article 2(b)

2.2.2 Poultry testing positive for salmonella

Where the FCI received shows that the batch has tested positive for Salmonella, the OV must ensure that the appropriate arrangements are in place to:

- slaughter the batch at the end of the production day where possible, or at the end of a production run where necessary on welfare grounds and
- undertake cleaning, and where required disinfection, after slaughter

Note: See chapter 2.1 on 'FCI and CCIR', topic 2.1 on 'FCI-Poultry' for full details of the required actions in the case of Salmonella positive poultry batches.

2.2.3 Poultry showing signs of disease

If the birds show clinical symptoms of a disease, they may not be slaughtered for human consumption. However, killing of these birds on the slaughter line may take place at the end of the normal slaughter process, if precautions are taken to

Manual for Official Controls: Amendment 96

avoid the risk of spreading pathogenic organisms and to clean and disinfect the facilities after killing.

Reference: Regulation (EU) 2019/627 Article 43 Paragraph 3.

2.2.4 Poultry slaughtered at the holding

In the case of poultry slaughtered at the farm and sent for delayed evisceration, the ante-mortem inspection will be done at the holding by an OV or an AV.

Delayed eviscerated poultry obtained at the farm of production may be kept for up to 15 days at a temperature of not more than 4°C. It must be then eviscerated in a slaughterhouse or in a cutting plant located in the same member state as the farm of production and must undergo post-mortem inspection. Non-eviscerated carcasses must be accompanied to the slaughterhouse or cutting plant with a 'Health Certificate for poultry intended for the production of foie gras and delayed eviscerated poultry slaughtered at the holding of provenance'.

Reference: Regulation (EU) 2019/624, Article 6(2) – Health Certification.

2.2.5 Health certificate

The post-mortem inspection at the slaughterhouse or cutting plant must include a check on the certificate accompanying the carcasses.

Reference: Regulation 2019/627 Article 10(2)

2.3 Suspect live animals

2.3.1 Slaughter of suspect animals

Suspect animals are to undergo detailed ante-mortem examination in order for the OV to make a decision whether the animal is fit for slaughter for human consumption.

The OV must defer the slaughter of animals suspected of having a disease or condition that may adversely affect human or animal health. The FBO should hold the animal(s) in isolation pending the OV's final decision.

Reference: Regulation 2019/627 Article 43(4)

2.3.2 OV judgement

Each OV should make a professional judgement based on the FCI, ante-mortem inspection or any other information presented, as to which animal/s should be further examined. Such an examination may include taking of appropriate samples.

2.3.3 Examples of suspect animals

Examples where the OV might identify suspect animals are where:

- animals show clinical signs of illness, disease or disorder
- animals show clinical signs of a disease transmissible to man or animals, especially a notifiable disease
- Example: animals are found or suspected to have any form of clinical TB
- animals show clinical signs of a disease or disorder likely to make fresh meat unfit for human consumption
- animals show signs of fatigue or stress

Note: they must be rested for not less than 24 hours unless the OV has determined otherwise

OR

- there is evidence or suspicion that illegal or unauthorised substances have been administered, or there may be veterinary medicines in excess of maximum residue limits present in the animal

Reference: Regulation 2019/627 Article 43(3) and (4).

2.3.4 Veterinary medicines

Animals that might contain residues of veterinary medicinal products in excess of the levels allowed or residues of forbidden substances are to be sampled with in accordance with The Animals and Animal Products (Examination for Residues and Maximum Residue Limits) Regulations 1997.

Reference: Regulation (EU) 2019/627 Article 43(5).

2.3.5 OV action

Where a suspect animal has been identified the animal should be removed to an isolation pen and a suspect animal card (AMI 2/2) completed.

The MHI conducting the post-mortem inspection of a suspect animal must be informed of the circumstances by the OV to ensure that ante-mortem and post-mortem findings are correlated and recorded on the AMI 2/2.

2.4 Emergency slaughter on farm

2.4.1 Local Authorities (LA) purpose

LAs are the CA for enforcement during the transit of animals from the farm to the slaughterhouse. The LA and APHA One Health must be contacted if any breaches are suspected during the transport of the animals. See Chapter 2.3 on Animal Welfare sub-section 3.3 'Referral to LA / APHA' for the referral process.

2.4.2 Definition

Meat from a red meat animal that has undergone emergency slaughter outside the slaughterhouse, following a veterinary ante-mortem, may be used for human consumption only if it is from an otherwise healthy animal that has suffered an accident that prevented its transport to the slaughterhouse for welfare reasons.

Reference: See ['Guidance for Veterinary Surgeons on the Emergency Slaughter of Cattle'](#) booklet produced by the British Cattle Veterinary Association (BCVA).

2.4.3 OV attendance

The OV needs to be present during **the post-mortem inspection** of any animal that has undergone emergency slaughter.

Delayed or cold inspection is not permitted for animals slaughtered on farm under the provisions in (EC) 853/2004 Annex III, Section I, Chapter VI.

The OV should note any injuries that would indicate an on-farm welfare problem and if these are present, APHA must be informed (reference number provided must be kept and recorded in the FSA Day Book at the slaughterhouse) as detailed in chapter 2.3 on 'Animal welfare'.

Manual for Official Controls: Amendment 96

Note: the square health mark has ceased to be used for emergency slaughter carcasses after 1 June 2014. The oval health mark should now be applied to all emergency slaughter carcasses passed as fit for human consumption.

2.4.4 Declarations

Where an ungulate is required to undergo emergency slaughter a health certificate is required to be completed indicating a favourable outcome of the ante-mortem and accompany the slaughtered animal to the slaughterhouse for examination by the OV.

Any observations relevant for subsequent meat inspection shall be recorded in the health certificate including details of any treatment administered by the PVS to the animal.

Reference: (EC) 853/2004, Annex III, Section I, Chapter VI, 5 & 6 and (EU) 2019/624, Article 4.

Reference: See Annex 1 for the combined 'Model Declaration for Emergency Slaughter for Human Consumption of Bovine Animals Outside the Slaughterhouse' and Regulation (EU) 2019/628, Part I of Annex IV 'Veterinary Surgeon's Declaration'.

Manual for Official Controls: Amendment 96

2.4.5 Eligibility

Please follow the steps in the table below with regards to eligibility:

Step	Action
1	Confirm animal eligible by checking: <ul style="list-style-type: none">• owner / keeper's declaration, see annex 1 of the MOC• veterinarian's declaration, must include details of ante-mortem and date and time of slaughter, see annex 1 of the MOC• verify that the identification of the animal matches that on the declaration and passport of a bovine animal• verify PVS is a member of Royal College of Veterinary Surgeons (RCVS) https://www.rcvs.org.uk/home/• transport time / chilling requirements complied with• any other eligibility regulations for human consumption (example TB restrictions on farm).
2	Check if any testing is required, for example, TSE.
3	Post-mortem inspection must be carried out by an OV at the slaughterhouse. Note: The OV can require any additional tests.
4	The oval health mark should be applied to fit carcasses.

2.4.6 Exceptional circumstances: bison

In exceptional circumstances, bison may be slaughtered on farm in accordance with the provisions relating to farmed game.

Reference: (EC) 853/2004 Annex III, Section III, Para 4.

Manual for Official Controls: Amendment 96

2.4.7 OV action in the case of discrepancy

The following table details the actions that the OV should take where discrepancies in eligibility occur.

Step	Action
1	In all cases, first contact the PVS who attended the animal.:
2	Where the declaration is not completed correctly and in particular does not have the date and time of emergency slaughter completed, please refer to the section on Declarations (above) for appropriate action to be taken.
3	Keep the PVS declaration received in a secure file and record the circumstances in the Day Book.
4	Record the results of post-mortem Inspection and correlate with the PVS declaration.
5	Any welfare concerns should be reported to APHA and the LA.
6	Where discrepancies in the declaration are identified and the PVS is unable to supply a correct declaration the carcass should not be health marked and must be rejected as unfit for human consumption because it is not in compliance with the requirements of (EC) 853/2004, Annex III, Section I, Chapter VI.

2.4.8 Examples of possible discrepancies

The following list is provided for illustrative purposes and is not considered to be exhaustive:

- The OV has verifiable evidence to support the opinion that the animal has not suffered a genuine accident.
- The declaration has been altered after completion without initials to confirm authenticity.
- The PVS was not present at the time of slaughter of the animal and / or the declaration does not conform to the requirements of the specimen declaration at Annex 1 of this chapter, including failure to record the date and time of emergency slaughter.
- Transport / time / chilling requirements have not been adhered to.
- The number of animals received from a single source is excessive.
- The OV has obtained verifiable evidence to demonstrate animal welfare breaches.

2.4.9 Declaration

An animal may be accompanied by a farmer's declaration that the animal is known or suspected to be injured or showing signs of abnormality.

Reference: See Annex 2 of this chapter for an example of a model document to accompany animals showing signs of a disease or condition that may affect the safety of meat derived from them

2.4.10 FBO responsibility

The farmer/owner who reared the animal must ensure that:

- A declaration stating the identity of the animal and indicating any veterinary products or other treatments administered to the animal, dates of administration and withdrawal periods, has accompanied the dead animal to the slaughterhouse.
- A veterinarian has carried out an ante-mortem inspection of the animal and completed a health declaration (date and time, reason for the emergency slaughter and the nature of any treatment).
- The slaughtered and bled animal has been transported to the slaughterhouse hygienically and without undue delay. Removal of the stomach and intestines, but no other dressing, may have taken place on the spot, under the supervision of the veterinarian. Any viscera removed has accompanied the dead animal to the slaughterhouse and has been identified as belonging to that animal.

If more than two hours elapse between slaughter and arrival at the slaughterhouse, the animal must be refrigerated. Where climatic conditions so permit, active chilling is not necessary.

The FBO of the slaughterhouse must verify that all the above requirements have been followed. The FBO must provide all the above documents and details to the OV at the slaughterhouse and follow any instructions during the post-mortem inspection (including any additional tests required) concerning the use of the meat.

Reference: (EC) 853/2004 Annex III Section I Chapter VI 'Emergency slaughter outside the slaughterhouse'

Manual for Official Controls: Amendment 96

2.5 Slaughter of fractious animals (bovine)

Domestic bovines that are considered fractious, dangerous or not handleable and which the FBO intends to enter into the human food chain can be slaughtered on-farm in exceptional circumstances.

This is a national policy which is permitted on a case-by-case basis, where such animals cannot be transported because transportation would present either a health or safety risk to their handler or a welfare risk to the animal.

Authorisation by the CA is required and must be informed in advance of the date and time of slaughter of the animal(s).

Other conditions that must be met are:

Step	Action
1	The owner of the bovine must submit a request to the FBO (at the slaughterhouse).
2	The herd undergoes regular veterinary inspection and details are available.
3	The circumstances are discussed between the AV (or OV carrying out the veterinary inspection on-farm) and the FBO and OV (at the receiving approved slaughterhouse) before any action is taken.
4	Prior agreement has to be reached between the OV at the slaughterhouse and FBO that the body of the animal can be consigned to the slaughterhouse for processing.
5	Animal welfare requirements are complied with.
6	<p>The AV/OV on-farm must issue a health certificate attesting to a favourable result of the ante-mortem inspection, correct slaughter and bleeding and the date and time of slaughter.</p> <p>This will require the AV/OV to be present at the time of slaughter and bleeding. The health certificate is to accompany the slaughtered animal during transport.</p> <p>See Annex 7 of this chapter.</p>
7	The appropriate declaration (FCI) must be duly completed by the farmer/owner who reared the animals, confirming their identity and indicating any veterinary products or other treatments administered, dates administered and any appropriate withdrawal periods. This must

Manual for Official Controls: Amendment 96

	<p>accompany the slaughtered animal to the slaughterhouse.</p> <p>See Annex 2 of this chapter.</p>
8	Correct animal identification must be provided (passport up to date with readable ear tags in bovines)
9	Slaughtered and bled animals are transported to the slaughterhouse hygienically and without undue delay. If transport takes more than two hours, the animals are, if necessary, refrigerated. Where climatic conditions so permit, active chilling is not necessary
10	The OV must be present when the body arrives, and carry out the post-mortem inspection

Some of the reasons for declaring the meat unfit for human consumption may include;

- Where the document/declaration accompanying the animal fails to comply with the information requirements for FCI in (EC) No 853/2004, this failure must result in the animal or meat from the animal being declared unfit for human consumption by the OV.
- If the decisions concerning live animals have not been complied with, the OV must declare the animal unfit for human consumption; this could include where the animal's identification is not reasonably ascertainable or where animals are subjected to treatment with veterinary medicinal products in excess of permitted levels or where there is suspected presence of veterinary residues because the required withdrawal period has not been complied with.
- Where any of the many decisions concerning meat have not been complied with, the meat must be declared unfit for human consumption: this may include failure to have undertaken an ante-mortem inspection (by the AV/OV on the farm); failure to have conducted a post mortem inspection (for example. when the offal has been discarded prior to post-mortem inspection) may also be a reason for declaring the animal or meat derived from it as being unfit for human consumption. The carcass and all by products would be required to be disposed of as ABP.

3. Record keeping

- 3.1 Record keeping purpose
- 3.2 Positive release pen card
- 3.3 Suspect animal card
- 3.4 Use of ante-mortem inspection records

3.1 Record keeping purpose

3.1.1 Purpose

- To record disease conditions for disease surveillance purposes.
- To indicate to the FBO that the OV has passed or rejected the animal for slaughter for human consumption.
- To meet statutory obligations to maintain records and supply FBOs, producers, veterinarians and the CA with relevant information.

3.2 Positive release pen card

3.2.1 Purpose

The pen card may be used to identify, to the FBO that the animals have been inspected and found as suitable to be slaughtered for human consumption without additional conditions. It should be clearly displayed on the pen after satisfactory ante-mortem inspection.

3.2.2 Completion

Plant operatives enter stock details.

The OV authorises slaughter by signing the positive release pen card.

Manual for Official Controls: Amendment 96

3.2.3 Retention period

Completed pen cards are retained for 6 months. They may be used to check that only animals which have undergone ante-mortem inspection are slaughtered.

3.2.4 Alternative arrangements

The pen card system may be unsuitable in some establishments. An equivalent system that achieves the same outcome may be used.

3.3 Suspect animal card

3.3.1 Purpose

This card must be used to identify animals considered suspect but which may still be suitable for slaughter. It must be completed by the OV and accompany the animal on transfer to an isolation pen.

3.3.2 Multiple suspect animals

Suspect animal cards may be used for groups of animals where the OV considers it impractical to use one card for one animal, for example, a flock of sheep.

3.3.3 Where to display

The suspect animal card must be attached to a suitable position on the isolation pen.

3.3.4 Retention of suspect animal cards

The OV must notify the MHI(s) of any suspect animal and ensure the subsequent post-mortem findings are recorded on the AMI 2/2 (Ante-Mortem Health Inspection Suspect Animal card).

Reference: See chapter 9 on 'Forms'.

The suspect animal card must be used to record the post-mortem findings and retained for 12 months.

3.4 Use of ante-mortem inspection records

3.4.1 ante-mortem inspection records: red meat

The AMI 2/3 (Ante-Mortem Inspection Record: Red Meat) must be used for all red meat species excluding pigs, unless the FBO provides an alternative containing at least the same information.

Note: The AMI 2/3 may still be used for pigs, as an aide-memoire, if required. See sub-topic below 'Ante-Mortem data recording for pigs'

Reference: See chapter 9 on 'Forms' AMI 2/3

3.4.2 Who completes the AMI 2/3

Competent lairage staff may complete details on the left-hand side of the form. FSA staff must complete details in the remaining columns on the right-hand side of the form.

3.4.3 Information to include

The OV / MHI must complete details of the date and time of inspection and the OV signs the appropriate column. The 'Comments / Action' column must include:

- details of any abnormalities noted and any subsequent actions required
- arrival of emergency slaughter animals

Note: ante-mortem details must be completed and the positive release box initialled by the OV / MHI to indicate that the animal and the documentation have been checked and found satisfactory; the MHI may initial this box in the absence of the OV

- arrival of farmed game slaughtered on the farm

Note: ante-mortem details to be completed on the joint declaration certificate. See Annex 7 in this chapter

- any welfare concerns and action taken
- the arrival of over 48 months old cattle or imported cattle requiring BSE testing as described in Chapter 2.6 (TSE), point 2.1.3 (Animals that require testing).

Manual for Official Controls: Amendment 96

3.4.4 AMI 2/5

The AMI 2/5 (Daily Ante-Mortem Inspection Record, Red Meat, excluding pigs) must be completed and signed by the OV on each day the establishment operates.

Reference: See chapter 9 on 'Forms'.

3.4.5 Information to include on the AMI 2/5

The OV must record on the AMI 2/5:

- each occurrence of a condition identified at ante-mortem inspection
- each occurrence of a condition resulting in the animal not being processed for human consumption
- each occurrence that required bovine brain stem testing
- the total number of each species presented for ante-mortem inspection

Note: The OV is to retain the completed daily form to record details on the Weekly Ante-Mortem Inspection Report, Red Meat (AMI 2/6).

3.4.6 AMI 2/6

The AMI 2/6 (Weekly Ante-Mortem Inspection Report, Red Meat) must be completed by the OV on the first day of operation the following week (Monday if worked).

Reference: See chapter 9 on 'Forms'

3.4.7 Information to include on the AMI 2/6

The OV must use the figures recorded for the previous seven days on the AMI 2/5 to complete this report. The OV must sign and return the report to CSU and retain a copy at the plant.

Note: Nil returns are required

3.4.8 Ante-mortem data recording in pigs

Ante-Mortem inspection records for pigs must be recorded by FSA staff on IRIS.

Manual for Official Controls: Amendment 96

The AMI 2/3 (Ante-Mortem Inspection Record – Red Meat) may be used as an aide-memoire prior to input of the data on to IRIS.

Reference: See chapter 9 on 'Forms' for AMI 2/3 and chapter 2.1 FCI CCIR for the IRIS user guide.

3.4.9 Ante-mortem data recording for poultry

Ante-Mortem inspection records for poultry must be recorded by FSA staff on IRIS.

The AMI 2/4 (Ante-Mortem Inspection Record – Avian) may be used as an aide-memoire prior to input of the data on to IRIS.

Reference: See chapter 9 on 'Forms' for AMI 2/4 and chapter 2.1 FCI CCIR for the IRIS user guide.

3.4.10 Who completes the AMI 2/4 (where used as an aide memoire)

Competent lairage staff may complete details on the left-hand side of the form. FSA staff must complete details in the remaining columns on the right-hand side of the form.

4. Movements

4.1 Movement of live animals from slaughterhouse

4.2 Field lairages

4.1 Movement of live animals from slaughterhouse

4.1.1 OV action

Animals that are presented to a slaughterhouse for slaughter must be slaughtered there unless moved under the authority of a licence issued by APHA.

Reference Regulation (EU) 2019/627 Article 43.

The Disease Control (England) (Wales) Order 2003 only allow animals to leave a slaughterhouse under the authority of a licence issued by APHA.

Reference: The Disease Control (England)/(Wales) Order 2003 Article 10.

4.1.2 Unidentified animals

Animals whose identity cannot be reasonably ascertainable must be declared unfit for human consumption. They cannot be returned to their farms of origin.

4.1.3 Movement of cattle in England and Wales

Cattle sent to the wrong type of abattoir can be moved to a correctly authorised abattoir. The FBO should apply to APHA for a licence. This applies to the following cases:

- cattle requiring Bovine Spongiform Encephalopathy (BSE) testing, sent to an abattoir not approved to process such cattle, may be moved to an appropriately approved abattoir

Reference: See Annex 6 for a sample Exceptional Licence for the Movement of Cattle from One Slaughterhouse to Another.

4.1.4 Movement of sheep, horses and birds in England and Wales

These animals may only be returned to farms or sent to other abattoirs in exceptional circumstances, such as a line breakdown.

The FBO must apply to APHA for a licence, except in the case of poultry.

4.1.5 Movement of pigs in England and Wales

Under no circumstances may pigs be moved from a slaughterhouse.

4.1.6 Movement of horses in England and Wales

Horses delivered to a slaughterhouse that are incorrectly identified must not be allowed to leave the premises. A horse incorrectly identified is not eligible for slaughter for human consumption.

However, a horse may be correctly identified and still be ineligible for slaughter for human consumption (for example, the Section IX is signed, withdrawal periods have not been observed). Horses correctly identified but not eligible for slaughter for human consumption can leave the abattoir provided no other restrictions apply (for example, disease controls).

4.2 Fields and buildings used in connection with the slaughterhouse operations

4.2.1 Fields which are part of curtilage

Field lairages within the curtilage of the approved slaughterhouse are part of the slaughterhouse and therefore the responsibility of the FBO. These field lairages are part of the approved slaughterhouse and must share the same CPH number.

Animals can therefore move into such a lairage.

The slaughter of the animals must not be unduly delayed, and the OV should monitor this, informing FBOs of their responsibilities.

Reference: (EC) 853/2004, Annex III, Section I, Chapter IV, 1.

4.2.2 Fields which are not part of curtilage

If the field (and this can also be extended to barns or other buildings used to keep animals) used in connection with the slaughterhouse business has a different CPH number, then even if adjacent it is effectively a different holding and subject to different rules.

These adjacent fields (or buildings) are not part of the approved slaughterhouse and must not be included in the curtilage.

These adjacent fields (or buildings) must comply with rules under The Disease Control (England)/(Wales) Order, the livestock identification and movements legislation and TB legislation and the movement of the animals on to the field and from the field on to the slaughterhouse must be reported, including the use of movement licences. They cannot serve as destination for animals moving direct to slaughter or via a slaughter market or collection while under standstill (DCO Schedule 1). Animals from TB restricted farms, or untested animals cannot be moved to an adjacent field with different CPH.

The OV must report to the LA Trading Standards for the abattoir any instance where the movement from animals from these adjacent fields (or buildings) to the slaughterhouse occurs unreported.

Under APHA's implementation of the ID Regulations, the FBO would be considered responsible for two holdings and subject to the biosecurity rules pertaining to such situations, defining effective operational separation of the two.

Animals cannot move from the slaughterhouse back to these fields (or buildings).

5. Cleansing and disinfection for biosecurity

- 5.1 Overview
- 5.2 Cleansing and disinfection (C and D) of lairages
- 5.3 C and D of livestock vehicles
- 5.4 Enforcement responsibilities

5.1 Overview

5.1.1 Introduction

Adequate C and D facilities and standards are essential for disease control and biosecurity. This topic details the requirements in England and Wales in both red meat and white meat slaughterhouses.

This chapter includes the official verification of the C and D standards of:

- lairages (including any area within the curtilage of the slaughterhouse in which live animals are handled).
- vehicles transporting livestock or poultry.
- crates and modules used for transporting poultry.

5.1.2 Legislation

The relevant legislation referred to in this topic is listed below:

- (EC) 853/2004
- (EC) 852/2004
- The Transport of Animals (Cleansing and Disinfection) (England)/(Wales) (No. 3) Order 2003 (as amended)
- The Disease of Animals (Approved Disinfectant) (England) Order 2007 (as amended).

Manual for Official Controls: Amendment 96

- The Disease of Animals (Approved Disinfectant) (Wales) Order 2006 (as amended).

5.1.3 Regulatory requirements

Red meat slaughterhouses must have adequate and hygienic lairage facilities or, climate permitting, waiting pens that are easy to cleanse and disinfect. The drainage of the wastewater must not compromise food safety.

There must be a separate place with appropriate facilities for the cleaning, washing and disinfection of livestock vehicles.

However, slaughterhouses need not have these places and facilities if the CA so permits and official authorised places and facilities exist nearby.

Reference: (EC) 853/2004, Annex III, Section 1, Chapter II, 1(a) and 6.

Poultry and lagomorph slaughterhouses must have a room or covered space for the reception of the animals and for their inspection before slaughter.

Crates for delivering animals to the slaughterhouse and modules, where used, must be made of non-corrodible material and may be easy to cleanse and disinfect. Immediately after emptying and, if necessary, before re-use, all equipment used for collecting and delivering animals must be cleansed, washed and disinfected.

There must be a separate place with the appropriate facilities for the cleaning, washing and disinfection of:

- a. transport equipment, such as crates; and
- b. means of transport

However, these places and facilities are not compulsory for b if officially authorised places and facilities exist nearby.

Reference: (EC) 853/2004, Annex II, Section II, Chapter I, 1(3) and Chapter II, 1 and 6.

5.1.4 Location of facilities

C and D facilities for livestock vehicles, crates and modules (for poultry and lagomorphs), must be provided in approved slaughterhouses.

Manual for Official Controls: Amendment 96

Legislation allows the approval of slaughterhouses without having these places and facilities if official authorised places and facilities exist nearby and the competent authority has given permission. Where this is the case, the FBO must have a high degree of control over the facilities which must be:

- capable of being reached easily
- situated within a reasonable distance from the slaughterhouse
- regarded by the FBO as part of the slaughterhouse
- possible for the OV to supervise.

However, poultry crates and modules must be always be cleansed and disinfected on site and before leaving the slaughterhouse.

5.1.5 Advice to FBO

The OV may provide the FBO with advice on C and D of their lairage and on the C and D facilities they must provide for livestock / poultry vehicles

5.1.6 OV action where the facilities are inadequate

When the facilities provided by the FBO are insufficient or fail to operate correctly, the OV must follow the guidance contained in chapter 7 on 'Enforcement'.

5.2 C and D of lairages

5.2.1 Introduction

The legislative requirements for the C and D of lairages in slaughterhouses are limited to those under the Hygiene Regulations and are therefore focussed on public health.

5.2.2 Lairage C and D requirements

The FBO must keep the lairage easy to cleanse and disinfect. Lairages and yards are part of the food premises and the FBO must keep them clean and maintained in good repair and condition. Consideration must also be taken of the need to prevent animals becoming soiled, and of the welfare of the animals while they await slaughter.

Manual for Official Controls: Amendment 96

As part of the FBO's legal responsibility for establishing procedures for the C and D of the establishment, the FBO should establish procedures for the C and D of the lairages and related areas (for example, unloading areas, races). The frequency and procedures including the disinfectant in use should be documented as part of the HACCP-based procedures (for example as pre-requisite programmes or SOP's).

The frequency and standards of the C and D of the lairage should be established by the FBO based on risk. For example, slaughterhouses receiving animals from TB restricted farms would require a more frequent C and D of the lairage and using disinfectants effective for TB.

In the case of specifically designated slaughterhouses for operating during outbreaks of exotic notifiable diseases, the designation conditions establish the minimum frequency for the C and D of lairage (for example, daily).

5.3 C and D of livestock vehicles

5.3.1 Introduction

C and D of livestock and poultry vehicles is essential for disease control and biosecurity, and not just with regard to zoonotic diseases. This topic details the requirements in England and Wales for ensuring compliance with C and D of livestock vehicles in both red and white meat slaughterhouses.

The responsibilities of vehicle drivers and FBOs are outlined as well as the FSA responsibilities in monitoring and enforcement of the C and D process, and LA enforcement responsibilities.

5.3.2 Vehicle C and D requirements (excluding horses and rabbits)

A vehicle which has delivered livestock or poultry to a slaughterhouse in England and Wales must be C and D as soon as reasonably practicable after unloading, and in any case within 24 hours or before the vehicle is next used for carrying livestock or poultry, whichever is sooner.

Note: the transport of animals between the same two points over the course of a single day and in a means of transport used exclusively for that purpose does not need to be C and D each time.

The C and D may take place at the slaughterhouse or elsewhere, in line with current regulatory requirements.

Manual for Official Controls: Amendment 96

Reference: Transport (Cleansing and Disinfection) (England) / (Wales) (No 3) Order 2003 (as amended). Article 3

5.3.3 Vehicle C and D requirements (horses and rabbits)

Before horses or non-hoofed mammals are loaded for transport, the means of transport must have been previously cleaned and, where necessary, disinfected. Disinfection is required in all cases where the means of transport was last used to transport livestock or poultry.

Soiled bedding and excreta must nevertheless be removed from the means of transport as soon as possible.

5.3.4 Vehicle C and D requirements (poultry)

Crates for delivering birds to the slaughterhouse and modules, where used, must be made of non-corrodible material and be easy to cleanse and disinfect. Immediately after emptying and, if necessary, before re-use, all equipment used for collecting and delivering live animals must be cleaned, washed and disinfected.

Disinfectant should be applied after the crates / modules have been cleaned. The disinfectant must be listed in approved disinfectants list on the Defra website for approved disinfectants and must be used at the established concentration.

In absence of an outbreak of Notifiable Avian Disease, the disinfectant must comply with the General Order. In case of an outbreak of Avian Influenza or Newcastle Disease, the designation of the slaughterhouse will require the use of disinfectants and concentration approved for the Poultry Orders.

Crates and modules must be cleaned on site so the use of Drivers' declaration is not applicable for them. In order to prevent the risk of recontamination, cleansed and disinfected crates / modules must only be loaded in cleansed and disinfected lorries.

The requirement for C and D crates and modules is a hygiene requirement and verification of compliance should be carried out during the daily attendance as any other hygiene verification checks. In case of identifying any breach, the hierarchy of the enforcement must be followed.

Manual for Official Controls: Amendment 96

5.3.5 Method of C and D

The interior and exterior of the vehicle and any containers and equipment used to transport birds or hoofed animals (other than horses) must be C and D.

In the case of animals not transported in a container; all the inside surfaces of those parts of the means of transport that the animals may have had access to during the journey must be cleansed whether or not they are soiled.

Any detachable fittings not used during the journey, any other part of the means of transport and any equipment must be cleansed if they are soiled.

In the case of animals transported in a container, the interior of the container shall be cleansed whether or not it is soiled, and the exterior of the container and any parts of the means of transport carrying the container must be cleansed if they are soiled.

The wheels, mudguards and wheel arches of the means of transport shall be cleansed whether or not they are soiled and whether or not the animals were transported in a container.

Overall, the only part of a vehicle specifically exempted is the driver's cab.

Disinfectant must be applied at the adequate concentration (as per approved disinfectant list published by Defra) after the full cleaning of those parts. The completion of C and D in a single operation is not satisfactory as disinfectant would not be effective in presence of organic material and the use of water during the disinfection would dilute the required concentration and / or contact time for the disinfectant.

Re-contamination of the lorry after disinfection should be prevented by ensuring an adequate separation, layout of establishment and procedures.

Containers may be destroyed rather than C and D (for example, single use containers).

Nothing in the legislation requires the use of disinfectant inside the driver's cab of any means of transport.

Reference: The Transport of Animals (Cleansing and Disinfection) (England) (Wales) (No.3) Orders 2003 (as amended) Schedule 2.

Manual for Official Controls: Amendment 96

5.3.6 Approved disinfectants

Vehicles or means of transport for animals that need to be disinfected after cleansing must be done so using a disinfectant approved under the Diseases of Animals (Approved Disinfectants) Orders, at the concentration required in the Orders.

A list of [Defra approved disinfectants for animal diseases and their approved dilution rates](#) is available.

For general disinfection, any approved disinfectant listed under the General Orders can be used. For specific disinfection for listed diseases (for example, bovine TB) only those disinfectants listed against the specific order may be used.

The following orders apply:

- General Order: to be used in all the lorries except when a specific order is required.
- TB Order: to be used in all the lorries transporting animals covered by specific or general TB licences (for example, bTB negative cattle from a farm under bTB restriction, bTB reactors, bTB direct contacts, bTB inconclusive reactors).
- Diseases of Poultry Order: to be used during outbreaks of Avian Influenza or Newcastle disease in lorries moved under licence (e.g. birds from PZ or SZ, mammals exposed to AI) and in designated slaughterhouses.
- Foot and Mouth Disease Order: to be used during outbreaks of FMD in lorries transporting animals requiring licence and in designated slaughterhouses.
- Swine Vesicular Disease Order: to be used during outbreaks of SVD in lorries transporting animals requiring licence and in designated slaughterhouses.

Reference: Diseases of Animals (Approved Disinfectants) (England) Order 2007

Diseases of Animals (Approved Disinfectants) (Wales) Order 2006

5.3.7 Livestock vehicle driver responsibility

Where a vehicle arrives at a slaughterhouse in England and Wales loaded with birds or hooved animals (other than horses), and is to leave the establishment unloaded without first being C and D on site, the driver must complete and sign a

Manual for Official Controls: Amendment 96

declaration form 'Undertaking to Cleanse and Disinfect Vehicle' (FM/AW 27) stating where C and D will take place.

Poultry crates, and where applicable modules, must be cleansed and disinfected before they leave the slaughterhouse (see 5.3).

The form FM/AW 27 is available online only and will no longer be available in hard copy from APHA. There is only a requirement for a single copy of the form.

The FBO should provide the driver with the FM/AW 27 for completion and signature. The driver should hand the completed form to the FBO for retention.

Reference: See Annex 3 for an example of form FM/AW 27. [The form is available online.](#)

Reference: The Transport of Animals (Cleansing and Disinfection) (England) (Wales) (No.3) Orders 2003 (as amended), Article 8.

5.3.8 FBO responsibility, England and Wales

It is the responsibility of the FBO to:

- provide the driver with the declaration form (FM/AW 27) for completion
- ensure the driver signs the declaration form
- keep the single copy for three months and produce it to an inspector on request
- send a copy of the completed declarations to his LA on the same day that he receives them.

5.3.9 Alternative forms

The driver's declaration has to be in a form approved by the Secretary of State.

There may be specific circumstances where, if agreed with Defra or the Welsh Government and the relevant Local Authorities, an alternative form may be used (see Annex 3b of this chapter).

Example: Integrated poultry businesses where vehicles always cleanse and disinfect at the same site.

5.4 Enforcement responsibilities

5.4.1 FSA responsibility

FSA authorised staff in England and Wales are responsible for monitoring and enforcement of the C and D process in approved red and white meat slaughterhouses by:

- verifying the availability of C and D facilities, equipment and approved disinfectant (for example, adequate water supply, suitable space, tools)
- verifying the C and D of poultry crates and modules.

These could be verified during the routine checks (during pre-operational checks or during ante-mortem inspection). The hierarchy of enforcement should be followed in case of failure to comply with this legal requirement (Regulation 853/2004, Annex III, Section I or II, Chapter II, paragraph 6 and Annex III, Section II, Chapter I, paragraph 3).

And by:

- undertaking random or targeted spot checks on the actual procedures followed for the C and D of vehicles transporting livestock or poultry.
- Monitoring the operation of the driver declaration system (if used in compliance with the article 8 of the Transport of Animals (Cleansing and Disinfection) (England) (Wales) (No.3) Orders 2003 (as amended) by undertaking checks to ensure that:
 - declarations are being given to and signed by the driver of the vehicle
 - declarations are being sent daily to the LA
 - FBO is retaining copies of the declarations.
- Issuing verbal warnings to the FBO and / or to the haulier where non-compliance of C and D rules has been observed.
- Serving a notice (**Note:** there are separate notices for England and Wales) to cleanse and disinfect a vehicle or container upon the person in charge of the vehicle or container where a means of transport, a container or any equipment either:
 - has not been cleansed and disinfected in accordance with the Orders; or
 - needs to be cleansed and disinfected because it may give rise to a risk of transmission of disease.

Manual for Official Controls: Amendment 96

- Immediately reporting to the LA the details of any cases of non-compliance with C and D rules, including where a notice has been served and has been disregarded, or needs to be followed up.
- Immediately reporting to APHA any breach of the licence movement conditions including the general movement licence for transporting cattle from TB restricted farms (see sample of TB24c in Annex 10 of the MOC Chapter 6).
- Informing the FBO.

The actual number or proportion of vehicles / declarations to be checked will be dependent on the level of checks authorised to be carried out at the plant, FSA authorised staff will have to undertake one of the following:

- Weekly checks – FSA authorised staff are to undertake 1.5 hours of checks each week, this can be split over multiple days or can be carried out on one day. Information from these checks must be recorded on K2. Plants undertaking weekly checks will be notified of the frequency of checks by the SLA and Contracts Team in advance and will be required to continue to check at that frequency for at least 3 months.
- Monthly checks – FSA authorised staff are to undertake 45 minutes of checks once a month within a set week (A schedule is available from the SLA and Contracts team) FSA staff can select any day within that set week but they must not select the same day as was selected in the previous month; for example, if in July checks were carried out on a Monday, in August checks can be carried out on any day but Monday. Information is to be recorded on K2. All approved red and white meat slaughterhouses will undertake the monthly check unless otherwise informed by the SLA and Contracts Team.

Note: There is no requirement to alternate days when checks are carried out if a plant only operates one day a week or vehicles only enter a premises on the same day each week.

Checks carried out weekly / monthly must include either a check of vehicles being correctly cleansed or disinfected or that declarations of 'off site' cleaning are being handled correctly. A combination of both must be undertaken whenever possible if vehicles at plants undertake either.

Checks carried out must be recorded on K2 and must include the number of vehicles checked for adequate C and D or the completion of the FM/AW 27 form, any issues that arise and what action was taken. Copies of any notices served should be retained at the premises for one year.

Manual for Official Controls: Amendment 96

Reference: The [K2 form](#) is available online.

Guidance for completing the K2 records are available at Annex 9.

Details reported to the LA should include the following:

- the vehicle registration
- the name of the driver
- where possible the suspected destination
- details of the breach
- copies of any notices served

The OV should make a note of any referrals to the LA in the plant enforcement records.

Reference: The Transport of Animals (Cleansing and Disinfection) (England) (Wales) (No.3) Orders 2003 Article 9.

FSA staff must also report any non-compliances in relation to completing the declaration forms to LAs detailing what has been incorrectly completed. The OV should note any referrals to the LA in the plant enforcement records.

Reference: The Transport of Animals (Cleansing and Disinfection) (England) and (Wales) (No.3) Order 2003 Article 8.

In relation to rabbits and horses, FSA staff should be aware of the animal welfare requirements to cleanse and, where necessary, disinfect animal transport after each use. Suspected breaches should be reported to the LA.

Reference: The Transport of Animals (Cleansing and Disinfection) (England) / (Wales) (No.3) Order 2003 Articles 4 and 5.

5.4.2 OV responsibility in relation to drivers' declarations

The OV is to discuss with the FBO any non-compliance where declaration forms are not being issued to drivers or not being sent to the LA as required. The FBO is to be reminded of their responsibilities and the importance of the declaration system in enforcing C and D rules.

Adequate C and D facilities and equipment are required in all the slaughterhouses regardless the implementation of drivers' declaration.

Manual for Official Controls: Amendment 96

Note: Breaches must be reported to the LA.

5.4.3 Local authority responsibility England and Wales

LAs and the FSA have shared enforcement responsibilities in relation to the C and D of vehicles at slaughterhouses. Appropriately authorised LA inspectors will discharge their responsibilities by:

- carrying out spot checks on drivers who have completed a declaration stating where they propose to carry out C and D of their vehicle as part of their risk based enforcement activity
- making announced or unannounced inspections to licensed establishments as part of a routine inspection programme; the OV present will be advised of their attendance and reason for the visit on their arrival
- responding to information received from FSA staff on NC with C and D of vehicles at the plant or the declarations procedure
- taking appropriate enforcement action where a notice has been served by the FSA under Article 9; LAs have sole responsibility for carrying out prosecutions
